THE Proprietor begs leave to inform his friends and the public generally, that the above named establishment is now re-opened. By his long connection with, and knowledge of the business, he is confident that his

Large and well selected Stock of Furniture

will suit the tastes of all desirous of purchasing

—For HOTELS, PUBLIC BUILDINGS, FAMILIES, &c., he guarantees satisfaction, as regards quantity, quality and price.

In store, and now opening, per recent arrivals, leading articles, consisting in part of the following, viz.:

Bedsteads,	Rocking Chairs,
Bureaus,	Whatnots,
Washstands,	Desks,
Tables,	Book-cases,
Chairs,	Parlor Sets,
Chamber Sets,	Gilt Frame Mirrors,
Dining Room Furniture,	Mahogany "
Office "	Sofas,
Mattresses,	Tête-a-Têtes,
Feathers,	Cribs,
Moss,	Comforters,
Pula,	Sheets,
Curled Hair,	Pillow Cases, &c.

Including everything generally to be found in a first class furniture store.

Orders from the country promptly attended to. All goods packed and delivered in the city and on board steamers and vessels, free of charge.

SEEDS, &c.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid.* Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (Sorghum Sucre).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by
J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

CHINESE SUGAR CANE,
OR,
SORGHO SUCRE.
PURE SEED.

THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of the crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 50 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,
W. P. ORME, Atlanta, Georgia.
Atlanta, November 7, 1856. v6-22

SEED WAREHOUSE,
110 CALIFORNIA STREET.

THE undersigned, Importer and Dealer in FIELD, GARDEN AND FLOWER SEEDS, is constantly receiving by every Steamer and Clipper from the States, fresh supplies of all kinds of

Field Seeds, Garden Seeds, Flower Seeds,
Bird Seeds, Tree Seeds, and Roots;
Hyacinths, Tulips and Bulbs of every variety;
Hedge Seeds for fences, &c.;
Alfalfa or Chili Clover Seed:
Red and White Clover, Lawn Grass;
Timothy, and all other kinds of Grass Seeds.
—ALSO,—
Apple, Pear, Quince, Plum, Cherry,
Apricot and Nectarine Pits;
Fruit and Ornamental Trees;
Garden Shears, Pruning and Budding Knives;
Ladies' Pruning Shears and Scissors.

☞ **All Seeds Warranted Fresh.** ☜
Orders from the Country, by Express or by Mail, promptly executed. For sale, wholesale and retail, by

SEEDS.

HOVEY & CO.,
DEALERS IN SEEDS,
No. 7 Merchant's Row, Boston, Mass,

ARE now receiving their new and fresh stock, embracing all the best and most desirable varieties of Agricultural, Garden and Flower Seeds, grown expressly for them by the most experienced cultivators. Purchasers who wish to obtain the most reliable Seeds are requested to forward their orders early.

Seeds packed securely for California or any other part of the country.

Also, from their own Nurseries, a very extensive collection of Fruit and Ornamental Trees and Shrubs, Grape Vines, Strawberries, Gooseberries, Roses, Greenhouse Plants, &c., embracing the best varieties in every department.

Catalogues sent gratis on application.
☞ Remittances must accompany orders. v6-19

NEW SEEDS.

A FEW Rare Seeds from France—
THE LEONARDI CAULIFLOWER,
The best in the world!
French Raddish Seeds, of extra varieties;
Broom Corn, Cotton, Tobacco and Morus Multicaulis Seeds
For sale at the Rooms of the State Ag. Society,
v6-19 tf Fourth street, Sacramento.

Seed Trees, &c.

J. R. RAY, importer and dealer in foreign and domestic Seeds, Trees, Bulbous Roots, Greenhouse Plants, &c., has removed to the capacious fire-proof brick store, No. 90 J street, where he is receiving and will offer for sale the coming season every description of

Choice Garden, Field, Flower and Tree Seeds;
Apple, Peach, Pear, Plum, Cherry, Quince, Nectarine, Almond, Fig and Ornamental Trees;
Currant and Gooseberry Bushes;
Grape, Strawberry and Blackberry Vines
Ornamental Shrubs and Vines;
Pie Plant and Asparagus Roots;
Green House Plants, &c.

Catalogues will be ready for delivery by the first of October. Consignments of Trees and Agricultural Implements attended to. J. R. RAY,
v6-9 90 J street, Sacramento.

Seed of the Great Tree.

A FEW packets of the Seed of this famous Tree are for sale at the State Society's Rooms, on Fourth street, Office of the California Farmer. v5-13

THE LAW OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.
2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.
3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.
4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.
5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facie evidence of intentional fraud.

☞ Postmasters would oblige, by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.

Postage of the Farmer.—The Postage of the Farmer to any part of the State is only 6¼ *cents per quarter*, or 25 cents per year. This is the lawful postage established by Congress, and when more is exacted it is a violation of law

THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOLUME VII. SAN FRANCISCO, CALIFORNIA, FRIDAY MORNING, MARCH 13, 1857. NUMBER 9.

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.

By WARREN & CO.

PUBLISHED EVERY FRIDAY MORNING, Simultaneously at Sacramento and San Francisco.

Office—on Fourth street, between J and K, Sacramento.
—No. 130 Washington street (up stairs), San Francisco.

Terms.—Five dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis.

☞ Advertisements in this journal will have a circulation and notice unequaled.

☞ Advertisements and Subscriptions must be paid for in Advance.

Sheep in California.

The following letter was received from one of our citizens, who is largely interested in the prosperity of our State, and who as a merchant and manufacturer has done a material service to California; we feel proud to be thus appreciated and shall ever esteem it a high reward to receive the approbation of those whose interests are connected with the permanency and prosperity of California, for it is their interest we support, and their approbation we need and desire to stimulate us:

—

Col. Warren: Dear Sir: As your very excellent paper is the only medium through which the agricultural population of the State seek for statistics of *facts*, relative to their own interests, and knowing your indefatigable energy and perseverance in collecting and laying before them such—and which has been the means of developing the resources of California in an eminent degree—I would like to give you a few facts relative to Sheep and Wool Growing in this State, which at the present time is exciting much interest.

There is probably no portion of the world, superior to California, for stock and grazing properties. Her richness of soil, being well watered, her variety of herbage and salubrity of climate, will bear me out in the assertion.

I had the pleasure of attending the auction sale of Merino and Saxony Sheep lately imported from Australia. As I learn, they are from the Station of Messrs. Cox & Biddington, located on the Hunter River, near Newcastle, New South Wales. Although not so fine-wooled and large-bodied as those imported by Messrs. Whitney & Co. a year since, still it is a pleasure to chronicle the fact of their arrival and the eagerness to obtain them by the large and respectable number of persons in attendance. I noticed a number of the principal Farmers, and large stockowners, present. I was *agreeably* disappointed in the prices obtained, and think that if they had been put up in smaller lots a much larger sum would have been received.

Those Sheep imported by the Messrs. Whitney & Co. (who by the by are the pioneers in this line) were purchased from Mr. Edward Cox, whose Station is situated on the Mudger River, New South Wales, and who is said to be the best stock breeder in Australia. These sheep are at present located in the vicinity of Sacramento. They were imported by one of the firm for their own use. They landed only one hundred and thirty (130). During the past year they have increased one hundred per cent, and I must say, those of the increase are superior to the imported ones, being larger bodied, heavier fleeced, and finer looking in every respect. *Just what the climate of California has done for them.* I learn they are now prepared to sell a portion of them for breeding purposes.

I understand they design shearing them the latter part of April. In Australia sheep-shearing time is looked forward to as a gleeful one, and during the season, the different Stations are visited by many desirous of witnessing the operation.

But I will not trespass further on your valuable space, but will reserve for a future communication. Yours, C. C. C.

San Francisco, March 11, 1857.

—

The sale of the fine Merino sheep, to which our correspondent alludes, was a most interesting one for California, and attracted as we anticipated a large and anxious audience, who looked upon this sale as an index of the future, and a proof of the public feeling at the present, in the business of sheep raising and wool growing as a permanent source of wealth for California. We think this sale was all and more than could be expected by the importers themselves, for the sheep were not in good condition, and the fact that so many had died and that disease might still lurk among them, was against them, yet in spite of these evidences the prices they brought were most satisfactory—and, as our correspondent says, "had they have been offered in smaller lots," they would have brought much higher prices. We rejoice at the result of this sale.

We have now several fine lots of sheep as breeders, to begin with in California—those first imported by the Messrs. Whitney, about a year since; those by Messrs. Searle & Wynn, a few months since; and the present lot, by Messrs. Daniel Gibb & Co.; and in each case a great advantage to our State. We examined the last lot, those just sold, and received samples of the wool; it is excellent, but not equal to the fleece of the Messrs. Whitney's, at Sacramento; but we have no question the future fleece will greatly improve by our climate. The wool of the sheep of Messrs. Searle & Wynn, was of the finest character.

Before we close this article, we desire to call the attention of our readers to the notice of the fact, that we are to have a *sheep shearing in California*, and we hope we shall have a merry time of it; we trust the Messrs. Whitney will appoint it for a "May-day festival." We should be glad to see the children there, as well as the grown people, and to have the "white lamb" decorated with flowers; it would be a most appropriate festival for such an occasion, and one that would be long remembered among what we esteem will be one of the greatest and most important interests of the State, that of wool growing. We refer our readers to other articles on sheep, in this issue.

A Prosperous Farmer.

Don Pedro's Bar, Tuolumne Co., March 7, 1857.

Editors Farmer: I notice in the last number of the Temperance Mirror an article copied from your valuable paper, on the "Prevention of Smut in Wheat," by one of your most able correspondents, I. D. Morley—with whom I am personally acquainted, and who is one of the most persevering and intelligent farmers we have in the State. As a man, he is a gentleman in every respect; and all who visit him, whether rich or poor, are treated with the utmost politeness and cordiality. With his experiments I am also well acquainted, and can testify to their correctness. My own plans when engaged in agricultural pursuits, are somewhat different from his: being, to every four bushels of wheat dissolve one pound of bluestone, or sulphate of copper, in sufficient water to cover, and well soak; after standing twenty-four hours, sow; but it should be recollected, it was nothing but an experiment.

Mr. Morley's Ranch is located in the county of Stanislaus, about six miles from French Bar, and not quite a mile back from the banks of the Tuolumne river. Since he has taken it up, he has expended over twenty thousand dollars in improvements, and has inclosed with a good and substantial fence nearly or quite sixteen hundred acres of tillage land, and will the present season have in from six hundred to one thousand acres of grain.

No one can visit his place without being forcibly struck by the great intelligence and perseverance of its owner; and to be the originator and owner of such a farm, is certainly a great honor, for even now, in its infancy, it vies to outdo anything of the kind in the older States. Yet, the greater glory of all, is, that when he arrived with his family about six years ago, he was almost destitute; thus showing a most beautiful example of what can be gained by continued perseverance and economy. Yours, &c., A. Olny.

—

We shall always be happy to receive the letters and communications of our friends who are engaged in the noble science of Agriculture, and if farmers desire to promote their own interest, in the most effectual way, they would give more time and attention to this subject. Every farmer might have a little to say relative to his own manner of cultivation, and the success or failure of his plans and efforts. If farmers do not succeed, in some of their modes of cultivation, by all means let us know it, particularly if it is practiced to any extent, and let it be a warning to others; and where a plan is successful, do not, like a miser, hoard this knowledge, but give it forth, freely. The success of our friend who is so justly complimented by this letter, is an evidence of this, for our readers will remember the letters which have from time to time appeared in the Farmer, from "Morley's Ranch," "I. D. M." etc.; and we can testify that these letters have done great good, and we have been most kindly benefited ourselves by the information conveyed to us; besides, Mr. M. has not only been a reader and contributor, but has sent us many names as subscribers to our journal—and we always note that those farmers who labor to extend knowledge to others, and to aid in the circulation of agricultural books and papers, and to encourage

THE ORANGE IMPROVED STUMP MACHINE. (Patented March 6th, 1855.)

promptly these duties, *always succeed.* "They that water, shall be watered."

We hope his praiseworthy example may be imitated in thousands of cases, and his prosperity enjoyed by all those who alike deserve it.

Stump Machine.

We present a cut of the New Improved Stump Machine, which is attracting great attention in all places where new settlements are being made, and the cut will illustrate its action clearly. Its value will be seen at once. Below is the circular of the proprietor, and a few of the notices which have appeared in testimony of its value. We have many such notices, which can be seen by those who may wish to purchase *Rights*, which are now offered for California, Oregon, and all the Pacific Coast. (See advertisement.)

The annexed circular and description will explain the invention fully:

Dear Sir: The above Cut gives an imperfect side-view of my Improved Stump Extractor. I am free to say that I wish this Machine brought into general use, because I need some compensation for the pains I have taken to bring it to its present state of perfection, and because it is desperately needed—for much beautiful land in many States of the Union, is defaced by odious stumps. This Machine has no rival; its power is very great; its action very rapid, and hence, it may be made to hurl an acre of stumps from their dominion in a very short time.

Have you a forest you wish felled, that you may bring the soil into grass lands and orchards? Place this machine beside it, and you can remove roots, trunks and all if you choose.

Have you lands near villages defaced by these eye-sores, which you wish to turn into house-lots and gardens? Get this Machine, and you need not wait half a century for the elements to do your work.

Do you build roads and encounter stumps on routes? Get this Machine. It will often do in ten minutes what ten men will hardly do in ten hours. Its utility is not confined to moving stumps, simply; it may be applied to massive rocks and buildings to great advantage, and is among the best inventions for such purposes. The Machine secured to one anchor stump, in a central point, may turn upon it without change, till a whole acre is cleared. Its average weight is about one thousand pounds. One horse can draw it and work it. One man can load or unload it; and one man, if need be, unaided by others, can do with it a fair and satisfactory business; but three are better than one.

I manufacture these Machines at Orange, Mass., where I hold myself ready to furnish them, when ordered from any part of the country. The prices will conform to the size, extent of chain, and and weight iron. Rock Machine, $125; Stump Machine, from $150 to $200. I should add, however, that the Machine is simple in structure, and, with the model I furnish, may be manufactured by any good and intelligent blacksmith.

My title to this Improved Patent (good for fourteen years), covers the nation, and I am ready to sell Rights to Towns, Counties, and States, at rates altogether reasonable. Please apply at once; my prices shall be low, my terms of payment easy, and if it is wished, I will take real estate or other property in exchange.

A BRIEF DESCRIPTION OF THE FOREGOING CUT.

A, the lever by which the power is obtained, supported at the ends on wheels, B, B. On the back of the lever in a mortice, which extends through it, plays the anchor-loop, through which passes the anchor-chain, G, F, by which the Machine is made fast to the stump, or any other permanent object. The anchor-loop forms the turning point, or fulcrum of the lever.

On the front of the lever are eight iron links, or purchases, four on each side of the anchor-loop, by which the power obtained by the lever is applied to the chains and rods, K, I, which connect it with the object to be removed. There are two arm-chains, one marked K, and the other held in the workman's hand. These chains, one end of them being hitched into the links on its front side, are by each turn of the lever, hitched further and further upon the main, or take-up chain, by which the object to be removed is forced from its former position.

H, P, represent the side-view of the crotch, or shears, constructed of two light timbers, of equal length, useful in moving large stumps, &c., as it adds not only vastly to the power applied by the lever, but changes its position from a sliding to a lifting motion, whereby the stump, instead of being dragged out of its bed, is lifted up, and its hold on the earth broken instantly. To raise the shears with ease, two pike-poles are used.

M, L, N, represent the fixtures, or the portion of the chain which connect the top of the shears with the stump. This may be a single chain for all ordinary purposes, because the *pulley and tackle principle* are unnecessary, unless the work be very heavy, demanding prodigious power.

Q, of course, represents the stump about to be tumbled from its bed.

Where shears are not used, the chain should in all cases, be hitched on the opposite side from where the lever is placed and carried over the top of the stump, for in this case, there is a rolling motion, and the power is more effective.

W. W. Willis.

[From the Northern Sentinel.]

A word about Stumps.—I am glad to see evidence, that here and there a farmer is *"stirring his stumps."* I have just seen the exploits of Mr. Willis' Stump Extractor, at Orange, Mass., where he has began to manufacture the article on a large scale. Well worked, I am told, it will turn out a lusty stump each ten minutes, hour by hour. This machine is much needed, even in New England, and still more in the Middle, Western and Southern States. It has made many fields lawn-like and beautiful, in and around Orange, and if brought into requisition, it can do the same from Maine to Georgia. The cost is something, but not frightful. A good machine, with the exclusive right to use it in any one town in the Union, costs $150 or $200, no more. This is less than the price of a piano, less than the price of the gold watch, with "fixins," which dangle from the pocket of many a fop!

I think Mr. Willis, the patentee, a benefactor; his patent will make rough places smooth, make two, yes, ten thousand spears of grass grow where but one grew before, and prove an element in the great process of civilization. Progress.

[Statement in the Farmer, at Amherst, Mass., for August, 1855, by its Editor, Prof. J. A. Nash.]

Patent Stump Puller.—Since reading the statement of Lieut.-Gov. Brown, we have visited Orange, examined the machine, and seen its powers fully tested. It is all that Mr. Brown has represented; and in two or three particulars, we think, it is somwhat more: 1st, it is equally as well adapted to drawing out stones, removing buildings, or almost any other business requiring a high power, as to the pulling of stumps; 2d, it will operate with great rapidity without unreasonably severe effort on the part of the men or team; 3d, it has come to its present improved state, slowly and by successive trial; did not come from the brain of a theorist, as Venus is said to have leaped from the brain of Jupiter, all beautiful and mature, armed cap-a-pie, ready to love or to fight, but resulted from the experience of a practical man, one thoroughly schooled in the rough and tumble business of drawing rocks and stumps.

But in commending it, while we are pledged to commend nothing which we do not believe to be worth buying, we are guided principally by what we have seen of its working. Mr. Willis took us into a field, which must have yielded a very large crop of pine boards. His force consisted of two men, neither of whom had ever worked at that business before, and a small pair of oxen. He said, "which stump will you see taken out." We selected the largest, the *ugliest*, and the worst situated stump in the field. He hitched to it as described by Gov. Brown, and lifted the great circle of roots and adhering earth, raising the side furtherest from the machine in advance of the other side, till it stood at an angle of forty-five degrees. At this point the men knocked off the earth, letting it fall back into the hole, the yellow subsoil at the bottom and the darker top soil above it. He then worked the machine again, and drew the stump along till the last root was detached. The time of the whole operation did not seem to be more than eight or ten minutes, but it was not measured.

Beet Root Sugar.

We copy, this week, a most interesting account of the manufacture of the Beet Sugar in France, and in various portions of England. This statistical account we copy from the Mark Lane Express, of London. As the article from which we quote is very long, we publish but part this week, and shall in future numbers continue the subject. A very spirited meeting has been held in San José, a company organized, and the work will commence the present season, as we are informed. Eugene Delessert, Esq., is very active in his most laudable exertions to stimulate these enterprises in California, and we are indebted to him for a copy of the Mark Lane Express, and for many facts in relation to present action.

—

Very numerous now are the signs and tokens around us, indicating that a great revolution in public opinion, with reference to agriculture, is about to take place. Not far distant surely is the time when this science—if, indeed, some will admit that it is worthy of the title, whose existence is scarcely recognized by our legislature, whose efforts are sneered at by the great bulk of the people, and which, by a large and influential "school," has been persistently put in the background, as altogether behind the improving capabilities of the age—will assert, by the energy, the scientific knowledge, and the business tact of its followers, its right to be considered as the most important of all the sciences, the "mother of all the arts."

Every day witnesses the introduction of a new power or process, still further to reduce the cost of working, or to increase the products of the farm; and no sooner is one "innovation" brought forward than another still more opposed to preconceived notions starts up, demanding the attention of the farmer, and offering him its aid. Now called upon to substitute for the "tired reaper's sounding strokes" the regular beat and untiring energy of the "machine reaper;" anon he is summoned to be told that the days of the "plow"—the time-honored instrument, the very synonym of his calling—are numbered, and that soon the "plow-boy's whistle" will be drowned in the puff and snort of the steam-engine; and now, while the agriculturist of the old school is wondering what all these "innovations" mean, and shakes his head doubtfully and ruefully at the evils he fancies they portend, and is apt to smile at the notion that *physiology, geology, chemistry,* or *mechanics* can be of any use to him, or enable him to rear one ear of wheat the more, he shakes his jolly sides with laughter when asked—O, shades of his broad-bottomed ancestors!—to become a *distiller*, and this in order that he may become a better *farmer.* Not very clear, doubtless, at the first blush of the matter, is the connection between the duties of these two diverse, or apparently diverse callings; but should the reader give us his attention for a short time, we hope to be able to prove to him that there is a close connection between them, and that the question of "farm-yard distillation," bids fair to become one of the most important of the day, involving as it does the very essence or spirit of agriculture—increased production of manure, and increased production of human food. We are not ignorant of the objections which have been and are now made to the "cultivation of beet;" but not now to enter into the discussion of this point, we simply state that the opinions *contra* have been given without due consideration of all the details of the question; and that the objections have been presented to the public with greater persistency than the points in favor of the cultivation. But of this, more hereafter—we hasten now to describe the important process which forms the subject of our paper. And this we propose to do under the heads "historical," "mechanical," "operative," "commercial," and "cultural."

1. Historical: The cultivation of beet, with a view to use it as a medium from which to obtain sugar and alcohol, is by no means a recent matter. So far back as 1747, Marghoff, a celebrated German chemist, published a report of his investigations as to the amount of sugar contained in the beet; and in 1796 Orchard commenced at Comorn, in Silesia, the practical manufacture of beet-root sugar. Again, with reference to the production of alcohol from this root, the Count Chaptal, in 1812, directed attention to the advantages of the distillation; and in 1825, M. Dubrunfaut seriously engaged a number of enterprising farmers and distillers to attempt the distillation of beet. "As the births," says Bacon, "of living creatures at first are ill-shapen, so are all innovations which are the births of time," this holding true of the above processes, for it was long ere improvements were made which rendered them commercially valuable. From a period shortly following the inauguration of Napoleon's celebrated "continental system," by means of which he hoped to shut out from France all the commerce of this country, up till now, a variety of improvements have been from time to time introduced in beet-sugar manufacture, which have resulted in bringing it to a pitch of comparative perfection, and in reducing the cost from the almost fabulous price of £1,600 for a single loaf—which sum the first loaf manufactured for Napoleon is said to have cost—down to a price which places it in favorable competition with the best of colonial produce.

The same improvement has characterized the distillation of beet. It was only in 1852 that the manufacture was established on a great scale, and yet so rapid has been its progress, that with a value in the above year of only £20,000, it reached the last year to the large amount of £2,000,000.

For an account of the most celebrated systems of distillation, we refer the reader to the interesting pamphlet as under*, proceeding to describe the "mechanical" arrangements of that system invented by M. Leplay, which is now being introduced under the spirited auspices of Messrs. Dray & Co., Swan Lane, London, and of which a very complete example in full working order is thrown open for the inspection of the public at Mr. Dray's farm at Farningham, near Dartford, Kent.

—

*"The Agricultural Distillers' Hand-book: the Method of Distilling from Beet-root." A short notice on the production of neutral spirit from beet, mangold wurzel, carrots, Jerusalem artichokes, etc., as successfully practiced on the Continent, and now permitted in England, by Act of Parliament. By a Practical Farmer and Distiller. G. T. Thomason, Thames street. 1s.

[To be continued.]

How Much Should a Cow Eat?—Cows, to give milk, require more food than most farmers imagine. J. W. Johnson, writing from Munich to the Country Gentlemen, gives an interesting report of some experiments which have been made in Bavaria, from which the following is an extract: "Our trials have confirmed the view that cows, to give the greatest possible quantity of milk, must daily receive and consume one-thirtieth of their live weight in hay, or an equivalent therefor. If more food be given it goes to the formation of flesh and fat without occasioning a corresponding increase in the yield of milk; but if, on the contrary, less food be furnished, the amount and value of the milk will be greatly diminished."

Ten Mile Match.—The great ten mile match for $5000, between the horses Gen. Taylor and Henry Clay, is to come off the 15th inst.

Trees and Plants suitable for California.

We find in the Patent Office Report descriptions of many trees and plants which will be acquisitions to California, and which, it is to be hoped, will be introduced and cultivated by those who have the opportunity to do so. We intend to publish these descriptions, and for the present give that of

THE TEA PLANT.

The Tea Plant (Thea viridis), which has so long afforded a most grateful beverage to millions of people in every civilized country of the globe, there is much reason to believe, may be successfully cultivated in favorable situations and under proper management, for local consumption, at least, in most, if not all of our Southern States. This was partially realized from an experiment made at Greenville, in the mountainous parts of South Carolina, by the late Junius Smith, in 1848 to 1852. He imported several cases of black and green tea plants, of Chinese stock, of from five to seven years' growth, and planted them in the village above named, where they remained about two years. On their removal to a plantation in that vicinity, in March, 1851, Dr. Smith stated that, "they grew remarkably last summer, and are now fully rooted, with fine large main and collateral roots, with an abundance of fibrous radicles. They all stood the snow, eight or nine inches deep upon the level, on the 3d of January, and the severe frosts of winter, without the slightest covering or protection, and without the loss of a single plant. They are now all forming part of the plantation, composed of those received from China last June, and a few planted the first week in June, which germinated the 17th of September. All these young plants were thinly covered with straw. Some of them have lost their foliage—others have not. The stems do not appear to have sustained any injury. The fresh buds are beginning to shoot. I cannot help thinking that we have now demonstrated the adaptation of the tea plant to the soil and climate of this country, and succeeded in its permanent establishment within our borders."

Considering the practical bearing this subject has on the economy and agricultural interests of our Southern States, it is surprising that a simple herb, which has proved of such universal acceptance, should retain this position in the world for centuries, and yet still continue to be restricted in its production almost entirely to the country of its origin, although corresponding regions, with respect to latitude, elevation above the sea, and other circumstances, which modify the climate, are open to its introduction and culture, and the most intelligent, as well as the most enterprising merchants and others have ever sought to learn every fact connected with its growth and subsequent preparation. Though regarded, in general, as a luxury, and by some even as food, yet it is not an article from which the people of any country should be debarred. On the contrary, it is the policy in this case, as well as in most others, of every government, to gratify the wishes of its people, and to facilitate the acquisition of this luxury by its economical importation, or, what would be far more desirable, to extend the production to its own soil. Respecting the expediency of such a measure in this country as that last named, little more need be stated than that most of our citizens will have it, and millions of dollars will annually be paid for its importation. To the argument which has often been advanced, that the very low rate of wages in China is the reason why the production of tea has not been encouraged in this country, it may be stated that, with improved machinery and other appliances, facility of transportation, robust and well-fed laborers, and probably with the aid of the Chinamen, now in California, there can be little doubt that we can successfully compete, at least for local consumption, with the primitive utensils, tedious manipulations, and absence of railroads, canals, steam navigation, and even of common roads, of the enfeebled and poorly-fed Asiatics. The cost of the transportation of tea in China, say at a distance, upon an average, from the plantations to Canton, the port of shipment, of 800 to 1,000 miles, at a waste of from six weeks' to two months' time, whole cargoes being constantly carried upon the backs of porters, is about four cents a pound, or about one-third of its value at the place of its growth. It is supposable that in no part of the United States, at a corresponding distance from the seaboard, would the cost of carriage be equal to one-fourth of that sum, or occupy one-tenth of the time. Dr. Jameson, superintendent of the tea plantations of the East India Company, on the Himalayan mountains, in his report of 1847, remarks that the task-work of one laborer is to dress, weed, and keep in order three acres of tea-land. In our Middle and Southern States, one hand cultivates, annually, and keeps in order, six acres of cotton, or of Indian corn. Therefore, assuming the amount of time for cultivating the respective crops to be equal, the American laborer would perform more than double the amount of work done by the Hindoo, which, undoubtedly, is about the difference in their physical force. Again, low-priced labor compels cheap living, which, with the Hindoo, consists principally of a little boiled rice, without animal food. This meagre diet just keeps his attenuated frame in existence, and renders him incapable of severe toil. On the contrary, the hardy laborer of the South is well and amply fed, three times a day, upon the healthiest food consumed by man—bacon, hominy, and corn-bread. But the chief part of the expense incurred in bringing tea to the consumer in this country consists in freight, insurance, storage, and the profits and commissions of the importers, factors, retailers, &c., most of which would be saved were this article produced near the place of its consumption. Without further elucidation of the subject, let us be content to rest the claims of the American cultivator for success upon the merits of the arguments herein set forth.

The tea-plant is not only found in China and Japan, chiefly in a cultivated state, but is indigenous in the mountains which separate China from the Burmese territories, especially in Upper Assam, bordering on the province of Yun-nan. It is also cultivated in Nepal, at an elevation of 4,784 feet above Bengal, in latitude 27° 42′ N.

Before proceeding in the inquiry, it would be desirable to ascertain whether one or several species of the genus *Thea* yield the several varieties of tea; as this might explain some of the discrepancies in the accounts respecting the soil and climate required for its cultivation. Some authors, among whom are Mr. Fortune and Dr. Lettsom, who traveled extensively in China, and had ample opportunities for investigating this subject, consider that all the varieties of tea may be obtained from the same plant, and that the differences are therefore due to the soil or climate, or to the age of the leaf and the mode of preparation. Others, on the contrary, are of the opinion that they are produced from at least two distinct species, *Thea viridis* and *Thea bohea*. There is no doubt, however, that the plants usually known as "Green" and "Black," when cultivated under similar circumstances, retain permanently their characteristics, and that their leaves, respectively, generally resemble those obtained after infusing good specimens of green and black tea. The green tea plant, moreover, is much more hardy than the black; one of the former having lived twenty years in the open air, near London, and being only killed in the very severe winter of 1837–38, when the thermometer fell to 4½° F. Yet, from the great extent of territory over which the tea-plant is found, and from the variety of situations in which it is produced, there can be but little doubt that it is grown in very different soils, though there are, doubtless, certain physical conditions that are best suited to the production of the finest flavored teas.

The tea-plant loves to grow in valleys, at the foot of mountains, and upon the banks of streams, where it enjoys a southern exposure to the sun, though it endures considerable variations of dryness and moisture, and of heat and cold; for it flourishes in the climate of Pekin, in latitude 40°, as well as about Canton, in 23° 8′ N.; and it is observed that the degree of cold at the former place is nearly as severe in winter as it is in some of our Middle States. The best tea, however, grows in a mild, temperate climate, the country about Nankin producing a better article than either Pekin or Canton. Mr. Bruce, who traveled in Upper Assam, in 1836, describes the tea districts as consisting of little mounds or hillocks of earth, on which large trees had grown, their roots alone appearing to save them from being washed away. One thing he observes as worthy of notice, that all the Assam tea grows near water, of which it appears to be very fond, for wherever there is a small stream, tea is sure to be found. He subsequently discovered, however, that tea plantations in that country were very extensive, both on the hills and in the plains. But excessive moisture, either in the soil or in the air, is not congenial to the growth of the tea-plant, as it is evident from its preference for sandy or porous soils, or the moulds, in the moist climate of Assam, but which probably would not be requisite where the climate is dry.

Mr. Fortune, who had frequent opportunities to inspect some of the most extensive tea districts of Canton, Fokein, and Chekiang, states that the soil of those of the northern provinces is much richer than it is in Quantung. "Tea shrubs," he says, "will not succeed well unless they have a rich sandy loam to grow in. The continual gathering of their leaves is very detrimental to their health, and, in fact, ultimately kills them. Hence, a principal object with the grower is, to keep his bushes in as robust health as possible; and this cannot be done if the soil be poor. The tea plantations in the north of China are always situated on the lower and most fertile sides of the hills, and never on the low lands. The shrubs are planted in rows, about four feet apart, and about the same distance between each row, and look at a distance like little shrubberies of evergreens. The farms are small, each consisting of from one to four or five acres; indeed, every farmer has his own little tea garden, the produce of which supplies the wants of his family, and the surplus brings him in a few dollars that are spent on the other necessaries of life." In Japan, tea is planted around the borders of fields, without regard to situation or soil.

The tea-plants are raised from nuts, or seeds, usually sown where they are to remain. Three or more are dropped into a hole, and covered with earth four or five inches deep; these come up without any further trouble, and require little culture, except that of removing weeds. The leaves are not collected from the cultivated plants until they are three years old; and, after growing nine or ten years, they are cut down, in order that the young shoots, which will then rise, may afford a greater supply of leaves. The best time to gather the tea is while the leaves are small, young, and juicy. The first gathering usually commences at about the end of February, when the leaves are young and unexpanded; the second, about the beginning of April; and the third, in June. The first collection, which only consists of fine tender leaves, is most esteemed, and is called by us "Imperial" tea. The second is denominated "Tootsjaa," or Chinese tea, because it is infused and imbibed after the Chinese manner. The last gatherings, which are the coarsest and cheapest of all, are drunk by the people of the lowest class. Besides the three kinds of tea named above, it may be observed, that, by sorting these, the varieties become still further multiplied. The Chinese, however, know nothing of "Imperial" tea, "Flower" tea, and many other names, which, in Europe and America, serve to distinguish the quality and the price of the article; but, besides the common tea, they distinguish two other kinds, namely, the "Voui" and "Soomlo," which are reserved for people of the first order of society, and for those who are sick. The principal varieties used in Europe, and in this country, are the "Green" tea, which is the "Bing," or common tea of the Chinese, and is gathered in April; the "Voui," or "Vou-tche," a delicate kind of "Young Hyson," which differs only from the other in being gathered a few weeks earlier, and consists of the young leaf-buds just as they begin to unfold; and the various descriptions of "Black" tea, which diminish in quality and value as they are collected later in the season, until they reach the lowest kind, called by us "Bohea," and by the Chinese "Tacha," or large tea, on account of the maturity and size of the leaves. The early leaf-buds, in spring, being covered with a white, silky down, are gathered to make "Pekoe," a corruption of the Canton word *Pa-ko*, white down. A few days' later growth produces what is sometimes styled "Black-leaved Pekoe." The more fleshy and matured leaves constitute 'Souchong;" as they grow still larger and coarser, they form "Congou;" and the last and latest picking of all is the "Bohea." The variety named above, called "Voui," is a scarce and expensive article, and the picking of the leaves in so young a state does considerable injury to the plantations. The summer rains, however, which fall copiously about this season, moisten the earth and air, and, if the plants are young and vigorous, they soon push out fresh leaves.

The process of gathering tea is one of great nicety and importance. Each leaf is plucked separately from the twig; the hands of the gatherer are kept clean; and, in collecting some of the finer sorts, it has been stated, upon credible authority, that he is obliged for some weeks previous to abstain from all gross food, lest his breath or perspiration might injure the flavor; to wear fine gloves while at work, and to bathe two or three times a day during this period. In the general harvest seasons, the natives are seen in little family groups on the side of every hill, when the weather is dry, engaged in gathering the tea-leaves, which are stripped off rapidly and promiscuously into round baskets, made for the purpose, of split bamboo or ratan. When a sufficient quantity is gathered, it is carried home to the cottage or barn, where the operation of drying is performed. The Chinese dislike gathering the leaves on a rainy day, for any description of tea; and never will do so, unless necessity requires it. Some even pretend to distinguish the teas made on a rainy day from those made on a sunny day. The process of rolling and drying the leaves, it is stated, can only be learned by actual experience; yet the system adopted to attain this end is as simple as it is efficacious. Let it be borne in mind, however, that the grand object is to expel the moisture, and at the same time to retain as much as possible of the aromatic and other desirable secretions.

As to the differences of flavor and color peculiar to the green and black teas, it is well known that, in many instances, they are produced by art. In describing the green teas grown in the districts of Chekiang, Mr. Fortune remarks that "it must not be supposed that they are the green teas which are exported. The leaf has a much more natural color, and has little or none of what we call the beautiful bloom upon it, which is so much admired in Europe and America. There is now no doubt that all these blooming green teas, which are manufactured at Canton, are dyed with Prussian blue and gypsum, to suit the tastes of the 'foreign barbarians!' Indeed, the process may be seen any day during the season by those who will give themselves the trouble to seek after it. It is very likely that the same ingredients are also used in dyeing the northern green teas for the foreign market." The Chinese, it is asserted, never use these dyed teas themselves; and certainly their taste, in this respect, is more correct than ours. It is not to be supposed that the dye employed can produce any very bad effects upon the consumer, for, had this been the case, it would have long since been discovered. As to the opinion that green tea owes its verdure to an inflorescence acquired from plates of copper, on which it is supposed to be curled or dried, there is no foundation for the suspicion, as the infusions undergo no change on the addition of volatile alkali, which would detect the minutest portion of copper by turning the liquors blue. And, besides, the drying pans and furnaces used throughout China, for this purpose, are said to be invariably made of sheet-iron.

Agriculture in District Schools.

We call the attention of all who are interested in the welfare of the rising generation to the importance of a correct education of those whose province it will be to become tillers of the soil. When we reflect that more than two-thirds of the population of the United States are directly interested in the cultivation of the earth, and that it is as absolutely necessary to be educated for it as for any other profession, we wonder at the neglect that has so long rested upon this important subject; but a brighter day is dawning. Several States have already begun the goodly work of introducing text books into the public schools, and we trust it will not be long before we shall be able to announce that California is not blind to the blessings a kind Providence has granted her in her climate, soil and other natural advantages.

We remember that a special committee was appointed last year at the meeting of the school teachers of the State, to take this subject into consideration and to act. We are pleased to say that a committee was requested to meet on Wednesday, March 11th, at the rooms of the State Agricultural Society at Sacramento, at 10 A. M. It is to be hoped every member of the committee was there, and that great good resulted from their action.

We are still further pleased to say that so great an interest is felt in this matter, that booksellers East have donated many copies of valuable works to be laid before the committees. (See special notices:)

There are not far from one hundred district schools in this country; all but eight or ten of which are, perhaps, filled with farmers' children; while an equally large proportion of the number of these children will probably follow farming for a business through life. And still, there is not a district school in the county—perhaps not in the State—in which the *science of agriculture* is taught—nor even those other sciences which most intimately apply to and promote agriculture; such as botany, geology, chemistry and natural history.

Is it any wonder that so many of our legislative bodies and other responsible offices are filled by men from other professions? Is it strange that the superior minds—or those supposed to be so—among farmers' sons, seek, or are sent to fill, other professions, where more mind and intelligence are *commonly considered* requisite to secure fame and success? Not at all. It will always be so until the profession of the farmer is elevated so as to demand and interest a higher and wider degree of intellectual effort, and will afford the rewards and honors of higher mental exhibitions. And certainly, no profession among men furnishes a wider or more diversified scope, for all the capacities of the mind than does that of agriculture, and when it is viewed in all of its requirements and relations—in short, when reduced to that proper and beautiful science which it is capable of presenting, and which it does present in the minds of those who look at it in all its bearings. The office of the teacher, preacher, the doctor and the lawyer, are noble callings, and demand justly a high order of mind to secure their highest usefulness; but still, the whole business of the complete farmer embraces a wider field for the exercise of thought and learning—all of the natural sciences are readily conducive to his interests—in fact, the other sciences are but branches of the grand agricultural science, when it is fully systematized and developed. Meteorology, climatology, and the others above named, all readily and naturally pay tribute to the pleasure and profit of farming, if the farmer does but intelligently demand of their treasures, with the same mental energy that men grasp the sciences of law, commerce, or navigation. A knowledge of the laws, habits, etc., of animal and vegetable life, together with the hidden earth-workings, are all calculated to enhance the delights and benefits of the farmer's vocation, if he but earnestly seek such knowledge with the devoted labors both of *mind and hand*, with the studious application of the lawyer or doctor.

These are but the general propositions which might be enlarged upon by giving the details, such as the best modes of farming, testing and preparing desired soils—of adapting crops to soils, and soils to crops—the principles of fertilizers—the rearing and feeding of stock—application and improvement of implements, and the like; either of which subjects would afford ample field for a lengthy essay—as well as horticulture and pomology.

Thus it may readily be seen that the science of agriculture embraces a wider, more varied, and beautiful field for mental labor than any other; and just in proportion as the full powers of the *mind* are earnestly brought into this service will the labors of the *hands* be rendered more pleasing and lighter. It is the grand foundation of all human *material* wealth and existence—it is the source from which all others derive their support; without the products of agriculture, manufactures, commerce and literature would perish and become extinct.

Is it not strange, unaccountable, then, that mind should so long and so much have neglected the profession of agriculture, while the others of less importance to our race have been, are still, over-stocked with half-idle, half-fed members? Why is it that the high dignity of farming has been so lamentably forgotten or overlooked? Simply, because it has not been properly understood and appreciated—the mental sky has hung with dark clouds, and the hands have been overtasked and irksome.

To correct this great mistake we must go to the foundation of things—to remove this prevailing error, we must go to work at the fountains of mental action and forces—we must go to the children, the cions of the rising generation—to THE COMMON SCHOOLS.

The study of agricultural science, in clear form, and the kindred sciences should be made common and necessary branches in our common schools, as much as grammar, astronomy or algebra—let it be expected and required that this shall be a matter of instruction in all our schools, the same as other common studies, and we shall soon see an interest and earnestness awakened for study among our farmers' children before unknown—we should soon see an intelligence and pleasure in the pursuit of farming with this true union of *science and practice*, which that profession has not before presented, while at the same time the benefits and profits would be measurably increased with the enlarged pleasure, including reduced drudgery. And better still, we should seldom see the humiliating sight, now too common, of too many of our best minds, leaving the profession of their fathers to seek a surer field of fame and fortune in the more popular pursuits.

Another advantage will be, that farmers will be better qualified, and have more confidence in their own abilities to become legislators to make laws for their own government as well as to fill other offices generally; and consequently will have less need for lawyers to explain everything to them, and to prepare all of their papers of trade and business. They will not seem to feel or expect it to be almost necessary that they should select persons from among the "learned professions" to deliver their lectures and addresses, and teach their schools, etc.

Perhaps, we have not as yet all the necessary text books, on this subject, to take familiarly into our schools—not the most suitable that could be, probably—but let their once be a general demand for them, and it will not be long before they will be provided—competent minds will quickly see our wants and supply them, so that there will be no more lack of text books than is found in other departments of study; the very spirit of discernment which perceives the wants and stimulates to improvement will speedily be awakened to furnish all the requisite facilities, as soon as the needy community shall generally and in earnest make the demands.

It is certainly as necessary that the children of the country should be taught in agricultural chemistry as in geography—in fact they may to a considerable extent be included in the same book for young beginners; for instance as the location and particular business of a place or country is described, it would be well and profitable also to have its soil carefully described—how it is constructed geologically—how it is, or should be, cultivated—what the system of fertilizing and the results—the most successful management of stock raising and dairy business; and so on. If geography makers would insert some general and reliable knowledge of this kind, and other kindred facts, their books would be both more interesting and useful, besides far more popular.

Certainly, it must be full as useful to scholars in general to be informed of the systems and results of agricultural operations in different localities, States, or nations as to know their common geographical details and political character.

Then again, the common text books on geology, chemistry, botany, natural history, may also be so improved by combining practical facts and statements of the same kind, as to render those works more pleasing and useful; by showing their application, in different ways, to the various arts of agriculture—as they all may greatly contribute to lighten the burdens, and increase the profits and pleasure of the farmer.

In this way book-makers, in those departments, may at one and the same time advance their own fame and usefulness, and benefit that branch of human labor which is the chief basis or dependence for prosperity to all branches of proper industry and enterprise—whether in making or carrying the necessaries of life. Thus, Mr. Editor, I have made some crude and brief suggestions on different points, in a direction, which, by following up, men of talent and learning may render great benefits to the country, and secure to themselves a high and proud name of usefulness. Shall the science and art of agriculture become a regular branch of study in our common schools? —[D. S. C., in Wisconsin Farmer.

CHINESE SUGAR CANE—Is destined to be the great sensation among farmers and planters next season, and of course many persons will have seed to sell. A word of caution is necessary to save imposition and disappointment. We think this plant promises well, both for sirup and forage, and that it can be cultivated in all parts of Ohio and States not higher than the same latitude. At the late meeting of delegates with the Ohio State Board of Agriculture, R. G. Corwin of Warren county, made some interesting statements of his feeding the sugar cane to his herd of Short-horns, which satisfied him of its great value as a forage plant. That first-rate sirup can be made from it at a cheap rate, has been pretty well established. We shall keep our readers informed of what we learn to the advantage or disadvantage of this new production. Farmers or speculators must not think that because seed sells high now, it will be equally a matter of profit to raise it for the seed hereafter, as it produces abundantly, and after next season seed will be plenty. We advise moderate experiments, and for home use, rather than speculation. There are three principal varieties now in the country: 1st, the Egyptian corn, which is not sweet; 2d, the sugar millet, which is somewhat sweet; and 3d, the Chinese sugar cane, which is very full of saccharine juice. We shall speak of cultivation and manufacture hereafter.—[Ohio Cultivator.

A SIMILE.—Winchell, the humorist, tells a story of a dog, which undertook to jump across a well in two jumps. There are a great many people just like that dog—folks who think they can jump across a well in two jumps. They that undertake it usually "bring up" down in the water.

The Early Agriculture of California.

JOHN A. SUTTER, THE PIONEER.

THE following deeply interesting letters of the brave old Pioneer, in relation to the early Agriculture of California, his opinions of the fitness of our climate for the vine, and for grain growers, will show his true interest for Agriculture; but we feel a still greater pleasure in presenting the noble and patriotic opinions expressed in behalf of the mechanic and other settlers, his generous offers to aid and assist them. These with his own views and wishes for the future prospects and glory of California, should give him the rank which his statesman-like views demand, and we trust these letters of this early and always true friend of California may be instrumental in placing him right with those who have not yet known him, as he truly is, a patriotic Pioneer: —

Information about California.

The following continuation of the translation of Capt. J. A. Sutter's letter, will be found interesting, as it developes some of the resources of the country:

NEW HELVETIA,
Upper California, May 18th, 1848.

Our harvest ripens in about three weeks, and I hope to secure at least 12,000 bushels of wheat, with barley, peas, beans, etc., in proportion. The next year, however, I hope to obtain a double quantity, and so on, each succeeding year. A fanega (two bushels) of wheat is usually worth here about two dollars, but at present, before the harvest, it is sold for four dollars. Through our excellent water communications the sale of our products has facilities unsurpassed in the world. For example, I have now large contracts for wheat and other staples with the Russians of the northwest coast. Were I able to freight the amount of four hundred tons more, they would readily receive it. The Russian colonies of the north are increasing every year. When I visited Sitka, six years ago, their consumption was already great, and is now four-fold. Sitka is the Governor's residence, and the See of the Bishop, with a seminary, good schools, a theater, etc., and lies in 57° north latitude. I am negotiating for the opening of a second good outlet for export with the French government, which needs wheat and other products for its Marquesas and Otaheite Islands. A French ship of 600 tuns, the Lion, visits the bay yearly to purchase cattle for those islands. We have much intercourse, too, with the Sandwich Islands, which has been greatly increased within a few years. Our visits grow more frequent every year, from the South Sea navigators and whale fishermen; of the latter of which from twenty-five to thirty already touch at the harbor of St. Francisco, yearly. Ships of war occasionally make their appearance, too, and their captains have often assured me that this harbor is the finest in the whole Pacific Ocean.

Next to agriculture, the raising of cattle is our most important pursuit, rendered easier by the fact that we have hardly any winter, and no snow. So soon as it begins to rain in the autumn, everything becomes green again, and stock is fat the whole winter through. My collection of stock consists of about 4,000 head of oxen, 1,500 mares, 200 tame horses, mules, etc., 3,000 sheep, and many hogs. They all pasture themselves, without difficulty, in the rich prairies and bottoms of the Sacramento valley, and require no trouble but a little watching, generally attended to by the native Indians. It is particularly a great assistance to us—one, indeed, which we could hardly dispense with—that we can hire the Indians as laborers very cheaply. They make slavery wholly unnecessary here, and may be employed for all field and house work. In harvest I have frequently employed at least 400 Indians.

The Culture of the Vine.—No country in the world is better adapted for vine raising than California. An excellent wine is made in some parts of California, and a considerable quantity of brandy. Any one who plants a good vineyard here, and understands its management, can in a few years, varying with the yields, acquire great profits. We have several instances of French and Americans, whose fine young plantations I have myself visited. The vineyards are full of fig, olive, and orange trees, the last bearing at once flowers and ripe and green fruit. A proof of the fitness for the culture of the grape, of the valleys of the Sacramento, the St. Joaquin and other streams, is the abundance of wild vines upon their banks. These bear very good grapes, of which we often make wine, vinegar and brandy.

Fisheries.—The rivers are full of fish, especially the salmon, which surpass those of the Columbia river. The heaviest weigh from forty-five to fifty pounds.

The Chase.—Game is found in profusion, as for example, thousands of elk, which gather in herds, and in summer are very fat. Equally numerous are vast herds of wild horses, deer, antelopes, etc. Of bears, there are great numbers. And, in the rainy season especially, one can kill immense flocks, I might say millions, of ducks, geese, cranes, pelicans, etc. Beaver, too, and land otters may still be found in some abundance, chiefly in the mountains.

Upper California.

Extraordinary Increase of Immigration—Demand for Mechanics and Laborers—Physic and Physicians—Political Future of the Country, etc.

The following is the conclusion of Captain Sutter's very interesting letter, which will be considered quite as important as previous portions of it—indeed, the spirit and interest of the letter is maintained to the close:

NEW HELVETIA, May 4th, 1848.

I have already alluded to the extraordinary increase of immigration within late years. I consider it my duty, under these circumstances, to give those Germans who have the design of coming hither, a hint to prepare as speedily as possible, in order to avail themselves of the favorable inclinations of the present Government to obtain their land gratis. Through my office and influence with the Government I can efficiently aid immigrants, and will gladly do all in my power for them. At the present time a resident of the country has projected a plan for direct immigration from Germany, and is about departing for Europe to organize an association for that object.

A wide field is open here for all who will be industrious, whatever their occupation may be; especially mechanics can find abundant employment here. Some of them would receive high wages—as smiths, carpenters, joiners, tanners, shoemakers. Tailors are wanting, too, and a good German tailor would make his fortune here in three years. For day laborers from $2

to $75 a month will be paid, according to the employment and the workman. I would add, that practical and skillful physicians would succeed very well here. In our late campaign, while we were in the "City of the Angels," near San Pedro and San Diego, the physician of my division, Dr. Townsend, received an offer of $1,200, by subscription of the wealthy inhabitants, on condition of his settling there only. His services as physician were not to be considered engaged by any one for this sum, but the fixing of his fees was left to himself. He preferred to undertake the charge of the hospital at Monterey, which the American Consul there built at his own cost. I have it in contemplation to build a hospital myself, and place over it a skillful physician, as cases needing his assistance daily occur. Five or six could find good situations in the neighborhood—they would find it prudent to provide themselves with such medicines as are most essential, since they are difficult to obtain, and high in price here.

As to the political future of the country, great uncertainty of course still prevails. Its great distance precludes the idea of a duration of Mexican sway, however desirable that might be if intrusted to so excellent a chief as Michelorena, with his enlarged views upon the protection of foreigners and the fostering of immigration. The United States as well as England have fixed their gaze upon this country, so fertile and favorable for trade, while France, on the contrary, would willingly see it an independent dominion. In Union with Oregon, a great and powerful "Pacific Republic" might be created, with the most magnificent prospects. Whatever may be the final destiny of the country, so much appears certain, as the natural result of immigration, that it will, within a few years, gain strength for a complete declaration of its independence. That for such times and events men of talent and character, able jurists and statesmen are greatly to be desired among us, is indisputable.

* * * * *

With great regard, &c.,
J. A. SUTTER.

AGRICULTURE THE MOST HONORABLE PURSUIT.—It is too generally the case that Agriculture is looked upon as a low pursuit. It is the highest, the noblest, the most honorable pursuit in which man can engage. It is the pursuit which the first man followed when he was placed in the garden of Eden and commanded to "dress it and to keep it." It is the pursuit which the best men of all ages have followed—which has numbered Socrates and Cincinnatus, and Burns and Lafayette and Jefferson and Washington.

What pursuit can be more honorable than that of cultivating the soil, and drawing from nature's vast resources those productions which support and sustain life? What vocation in life can compare with it? Who need be ashamed or disgraced in pursuing Agriculture? unless he does it so imperfectly and improperly as to bring disgrace upon himself, not upon his pursuit.

One cause undoubtedly which has a tendency to place a low estimate upon the profession of Agriculture, is the low standard of intelligence which too frequently is the case, is considered necessary to pursue it successfully. But every year this standard is being elevated, and it will not be long before a thorough education will be considered as indispensable to the farmer as it is to any of the learned professions. When this is the case, when the pursuit of Agriculture is properly appreciated, when intelligence is considered an indispensable requisite to the pursuit we shall not have that vast train of young men annually leaving farm life and embarking in the learned professions, or in commercial pursuits, there to lead lives harassed by the most perplexing cares where failure is too often the result.—[Valley Farmer.

FISTULA—POLL EVIL.—Your subscriber calls for the cause and cure of fistula on horses. Fistula and poll evil are both usually caused by a bruise, the former frequently by the improper tightness of the top of the hame or collar; the latter by receiving a blow on the top of the head or neck. The result is, that pipes are formed which discharge a glutinous matter, very offensive, and keeping the animal in a low and almost worthless condition. The cure which I have practiced in my own and several other cases, and which, if thoroughly done, I will warrant not to fail, is as follows:

Cleanse the sore with soap-suds thoroughly, take a goose-quil or smoothly peeled apple-tree sprout and sound the pipe or pipes, finding their direction and depth; take some stiff paper, roll it up in horn shape about the size of a goose-quill; fill it with arsenic, double over the ends, insert the pipe and push or drive it to the bottom; serve all the pipes in the same manner, and you will see no further issue of matter until the diseased portion breaks loose and comes out. Now adjust your harness so as not to rub the part affected, and set your beast at work if you wish, but do not over-heat him, and no harm will result. After it breaks loose, which will be in from three to six weeks, cleanse it one day with soapsuds, and the next with a wash composed of one teaspoonful of white vitriol, one of burnt copperas, one of burnt alum, and one of gunpowder, in one pint of rainwater. Oil the sore well after washing. This will prevent the formation of any new pipes, and cause the sore to heal rapidly. The above is communicated to the Rural Yorker, by L. L. Wilkinson, of Fleming, N. Y.

A NEW DIAMOND.—Two French chemists, it is stated, have succeeded in crystallizing the well known substance boron, which has hitherto been known only as a greenish brown powder, or in combination with an acid, and they submitted specimens of the crystals to the Academy of Sciences lately. These crystals possess a brilliance and refractive power which nothing equals but the diamond, and they rival even that in hardness, being capable of scratching corundum, which, next to diamond, is the hardest substance known. The specimens yet obtained are very small, and have a shade of red or yellow, but the color is believed to be accidental, and they hope that further experiments will enable them to procure it colorless. Boron agrees with silicon in many of its properties, and is considered as intermediate between it and carbon. This discovery may soon put us in possession of a fictitious diamond which the most experienced eye will be unable to distinguish from the genuine.

A GALLANT PAINTER.—Gilbert Stewart, the celebrated portrait painter, once met a lady in the streets of Boston, who said to him: "Ah, Mr. Stewart! I have just seen your likeness, and kissed it, because it was so much like you." "And did it kiss you in return?" "Why no." "Then," said Stewart, "it was not like me."

A LEGAL LEGACY.

BY JUSTICE STORY.

Whene'r you speak, remember every cause
Stands not on eloquence, but stands on laws—
Pregnant in matter, in expression brief,
Let every sentence stand in bold relief;
On trifling points, nor time nor talents waste,
A sad offence to learning and to taste;
Nor deal with pompous phrase; nor e'er suppose,
Poetic flights belong to reasoning prose.
Loose declamation may deceive the crowd
And seem more striking, as it grows more loud;
But sober sense rejects it with disdain,
As nought but empty noise, and weak, as vain.
The froth of words, the schoolboy's vain parade
Of books and cases—all his stock in trade—
The pert conceits, the cunning tricks and play
Of low attorneys, strung in long array,
The unseemly jest, the petulant reply,
That chatters on, and cares not how, or why,
Studious avoid—unworthy themes to scan,
They sink the speaker and disgrace the man,
Like the false lights, by flying shadows cast,
Scarce seen, when present, and forgot when past.
Begin with dignity; expound with grace
Each ground of reason in its time and place:
Let order reign throughout—each topic touch,
Nor urge its power too little, or too much.
Give each strong thought its most attractive view,
In diction clear, and yet severely true.
And, as the arguments in splendor grow,
Let each reflect its light on all below.
When to the close arrived make no delays
By petty flourishes, or verbal plays.
But sum the whole in one deep, solemn strain,
Like a strong current hastening to the main.

New Postage Act.

An Act providing for the Compulsory Prepayment of Postage on all transient Printed Matter—Approved January 2d, 1857.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the provision in the Act approved August thirtieth, one thousand eight hundred and fifty-two, entitled "An Act to amend the Act entitled 'An Act to reduce and modify the Rates of Postage in the United States and for other purposes,'" passed March third, one thousand eight hundred and fifty-one, permitting transient printed matter to be sent through the mail of the United States without prepayment of postage, be and the same is hereby repealed. And the postage on all such transient matter shall be prepaid by stamp or otherwise, as the Postmaster General may direct.

INSTRUCTIONS TO POSTMASTERS.

Transient Printed Matter, &c.

1. Books, not weighing over four pounds, may be sent in the mail prepaid by postage stamps, at one cent an ounce, any distance in the United States, under three thousand miles; and at two cents an ounce, over three thousand miles, provided they are put up without a cover or wrapper, or in a cover or wrapper open at the ends or sides, so that their character may be determined without removing the wrapper.

2. Small newspapers and periodicals, published monthly or oftener, and pamphlets containing not more than sixteen octavo pages each, when put up in single packages weighing at least eight ounces, to one address, and prepaid by postage stamps, may be sent to any part of the United States at one-half cent an ounce or fraction of an ounce.

3. Unsealed circulars, advertisements, business cards, transient newspapers, and every other article of transient printed matter (except books and packages of small publications as above), not weighing over three ounces, sent in the mail to any part of the United States, are chargeable with once cent postage each, to be prepaid by postage stamps. When more than one circular is printed on a sheet, or a circular and letter, each must be charged with a single rate. This applies to lottery and other kindred sheets assuming the form and name of newspapers, and the miscellaneous matter in such sheets must also be charged with one rate. A business card on an unsealed envelop of a circular, subjects the entire packet to letter postage. Any transient matter, like a circular or handbill, inclosed in or with a periodical or newspaper sent to a subscriber, or to any other person, subjects the whole package to letter postage; and whenever subject to letter postage from being sealed or from any cause whatever, all printed matter, without exception, must be prepaid or excluded from the mail. It is the duty of the postmaster at the mailing office, as well as at the office of delivery, carefully to examine all printed matter, in order to see that it is charged with the proper rate of postage and to detect fraud. At offices where postage stamps can not be procured, postmasters are authorized to receive money in prepayment of postage on transient matter, but they should be careful to keep a supply of stamps on hand.

4. It is no part of the duty of a postmaster to receive and deliver to subscribers any other newspapers than those which come in the mail, or to put the address on newspapers sent to clubs, or to deliver them from a furnished list; nor should he do either, even through courtesy, unless it may be done without interfering with the legitimate business of his office.

Registration of Letters.

5. The regulations and instructions to postmasters, for carrying into effect the third section of the Act of March third, one thousand eight hundred and fifty-five, providing for the registration of valuable letters, are modified as follows, viz:

First. So much of sections four, five and six of these regulations as requires that packages of registered letters shall be *sealed*, is hereby revoked.

Second. All registered letters are, before mailing, to be *numbered* on the upper left hand corner, their numbers to correspond with those on the letter bills in which they are entered.

Third. Each registered letter or package of registered letters, will be inclosed in a wrapper in the usual manner, and if there be a package of unregistered letters to be sent by the same mail, the package of registered letters will be placed in such package, without being tied, and the whole will then be carefully tied up into one package, addressed to the office of its destination, and placed in its appropriate bag at the moment when that bag is to be finally locked and sent from the office. If no unregistered letters are to be sent by that mail, the package of registered letters is to be tied and forwarded in the same manner without being sealed.

Fourth. The registered letter bill will be inclosed in a separate envelop, addressed to the postmaster as now required, and will be forwarded by the usual route as an unregistered letter.

Fifth. The numbers given to registered letters, at the office of mailing, are not to be changed in the accounts or letter bills of distributing offices through which they may pass.

Sixth. Postmasters are required to see that the *postmark* of every letter (whether written or stamped), is clear and distinct, so that the place and date of mailing can be readily determined.

JAMES CAMPBELL, Postmaster General.
Post-Office Department, Jan. 3, 1857.

LORENZO DOW.—Verily, he was a curious citizen, that same Lorenzo. We have heard him hold forth from hill and from tree top; a curious presence, something between one of the personations of Hervio Nanc, and an actual person; but, in the ensemble, "most like to carcass parched on gallow-tree." What Coleridge says, in one of his pictures of the superannuated chamois of Switzerland, would have specially applied to Dow. When fairly engaged in "exhortation," he would foam at the mouth like a wild bull of Bashan, insomuch that sometimes it would float in flakes.

——"adown his beard, that downward went,
His garment skirts unto."

Among the ready retorts for which he was famous, is one which some of our readers may have heard before and forgotten, while many, doubtless, have never heard it at all. Happening in his travels—for he was evermore on the move—to be at Delhi, New York, he stopped for the night at the hotel of a Mr. Bush, the chief Boniface of the village, a round and oily man, with ruby nose, and atheistical principles. In the course of the evening, the celebrated General Root, now of the New York Legislature, dropped in, and being of the same mind with Bush, they began to quiz Dow with might and main. Finally, General Root determining to give him a puzzler, said:

"You talk a good deal about Heaven: pray give Mr. Bush and myself a description of it. A man who sees it in dreams and trances as often as you profess to do, ought to describe it perfectly."

"Well, gentlemen," said Dow, "I can describe it, but I must do it briefly. Heaven embraces a vast extent of territory; the air is clear and wholesome; the country smooth and level; there isn't a *Root* or a *Bush* in it, and there never will be!"—[Phil. Gazette.

ETIQUETTE AT THE TUILLERIES.—At the recent Tuilleries ball, the Emperor caused it to be notified to her Majesty's ambassador that it would be agreeable to him if Lord Cowley would waive his right of precedence in favor of Prince Frederick William of Prussia. His lordship replied that, however desirous to please the Emperor, and show every respect to Prince Frederick William, it was not in his power to accede, as he was bound not only to his sovereign, whom he represented, but to the position he held, not to waive a rule of fixed etiquette, and thereby establish a new precedent, which might serve as such whenever a foreign prince, not sovereign or even direct heir to sovereignty, might arrive at Paris. This being done, Lord Cowley retired before supper, and left M. de Kisseleff and Baron Hubner free to waive their privilege as they might think fit. The diplomatic corps all agree that Lord Cowley acted in strict conformity with the laws regulating such matters.

A WITTY PLAYER.—A celebrated comedian arranged with his greengrocer, one Berry, to pay him quarterly; but the greengrocer sent in his account long before the quarter was due. The comedian, in great wrath called upon the greengrocer, and, laboring under the impression that his credit was doubted, said: "I say, here's a pretty *mul*, Berry; you have sent in your *bill*, Berry, before it is *due*, Berry. Your father, the *elder* Berry, would not have been such a *goose*, Berry; but you need not look *black*, Berry, for I don't care a *straw*, Berry, and I shan't pay it till *Christmas*, Berry."

A LUCID EXPLANATION.—A Frenchman being troubled with the gout, was asked what difference there was between that and the rheumatics. "One very great difference," replied Monsieur: "suppose you take one vice, put your finger in, you turn the screw till you can bear him no longer—dat is de rheumatism; den 'spose you give him one turn more—dat is de gout."

VERY CHARITABLE.—"Well, neighbor, what's the most Christian news, this morning?" said a gentleman to his friend.

"I have just bought a barrel of flour for a poor woman."

"Just like you! Who is it that you have made happy by your charity this time?"

"My wife!"

THE State of Pennsylvania claims the honor of originating the first Agricultural Society in the United States after the Revolution. It was founded in the year 1785.

PROSPERITY.—Prosperity shines on different persons much in the same way that the sun shines on different objects. Some it hardens like mud, while others it softens like wax.

IN the neighborhood of Albany, N. Y., the potatoes are so large, that, the Knickerbocker says, the dealers paint them green and sell them for watermelons.

Benicia High School.

THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by CORNELIUS J. FLATT, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17TH of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS: PER MONTH

Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.

No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.

For further information or references, address the Principal.

The California Farmer.

SAN FRANCISCO, FRIDAY, MARCH 13, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

"Always in Advance."

Those who are desirous of having our journal will please remember the terms are—always in advance. We often have letters directing us to send the Farmer and a bill; in looking over the letter we do not find that "Five-spot," and knowing the parties to be good and honorable men, we send the paper. It then *sometimes* occurs that forgetfulness, or convenience, or a removal, or perhaps a visit to the States, causes our claim to be overlooked, and the small sum of five dollars, is lost to us. Now we wish to be as kind and obliging as we possibly can; our labors and duties are many and arduous, and we do hope our friends will think of this five dollars—it is but a small sum itself, but the aggregate of many fives creates means that would materially advance the cause of all interested.

When a subscriber's term is out, we do not wish to stop the paper abruptly, and we therefore inclose a bill with the next number, and wait sufficient time for him to signify his wish. If we are not requested to stop the paper, and he continues to receive it, we consider it equal to renewal and look for a remittance, and we ask our friends to inform us promptly in this matter. Either return the paper as a notice of non-renewal, or kindly remit us, and thus aid us in a work we believe worthy support.

☞ **READ—Copies of the Farmer for Mailing.** That all may have an opportunity of sending the Farmer to their friends in the East, so as to make known the resources of California, we have

Reduced the price to Twelve and a-half Cents per Copy.

It will hereafter be found at the following places:

J. W. Sullivan, Ullman & Co., } Post Office Arcade.
Noisy Carrier's, Long Wharf
Hutchings & Rosenfield, Montgomery street.
Book Store, corner of Clay street and the Plaza.

At these places can also be found copies of the State Society's Reports. Price 50 cents.

The Farmer will also be had ready for mailing at all times at the office, at $1 50 per dozen; also single copies.

☞ Newspaper Route for Sale.—We can offer a good Route for the city of San Francisco, and one for Sacramento, to one who has the taste for making known our journal. A very profitable route can be thus secured to active and experienced men

California and Oregon Produce.

It must be very gratifying to every true Californian to note the certain evidences we are daily receiving of the progress we are making for true independence. We take pleasure in visiting, as we do constantly, the stores and warehouses of our merchants and traders, to ascertain the real condition of trade and those commodities that are most reliable, and while we note large stocks of foreign goods piled up that are only eating up interest and costs, we also note large piles of home-made goods that are daily going in and out of stores that the *people are eating up*—and these make trade lively, and put profits in the pockets or safes of those merchants who are interested in such articles.

A few days since we saw it stated in one of the daily papers, that a merchant had received a *Ham* that weighed thirty-eight pounds; this attracted our attention and we went to see this *famous ham*, and found not only a noble ham, but sides of bacon too, of equal magnitude,—and what is better, the worth of these delicious meats corresponds in every other particular. E. S. Gross, Esq., in whose large warehouse (near the Railroad House) on Commercial street, we found these articles, very politely exhibited to us the various samples of Oregon hams, bacon sides, butter, lard, and other products which he is constantly receiving from Oregon; and also the butter, cheese, lard and hams of our own State. It is these evidences of wealth that we see springing up around us; the home products, that speak to us in a voice we cannot misunderstand, and which are of more value to California than all her gold mines, inexhustible as they are.

There is an important duty and a heavy responsibility resting upon the whole community in relation to these home products, that we fear is not properly understood. Every merchant, particularly, who intends making California his home, is dependent upon these great interests for his permanent prosperity, upon the success which shall attend these enterprises that build up a country, her agriculture, manufacturing and mechanical interests; on these depends the success of the merchant, and at the present moment, when all kinds of trade appear embarrassed, if merchants would look into the stores and warehouses and see the vast amount of products of foreign origin, they would not wonder that the wheels of trade are clogged.

The industry of California must have a preference among all classes, and if a proper encouragement was given by the Legislature and our merchants to an increase of home products, if the butter, cheese, lard, hams, bacon, pork, beef and all other products, had the preference, and it was known they would have, they would be made better; more care and attention would be put to them—and we feel confident that California can produce all these articles, equal, if not superior, to any that can be imported.

The stock of these products is now on the increase, and it behooves those who are producers to select those merchants for the sale of their products, who have capital and influence to make these products known widely, and such persons as can afford them facilities to increase their business and make it permanent.

Producers should have large warehouses or headquarters, where they can show their products, and bring them in fair and just competition with those of foreign make. We are happy to point to a House whose card appears in our columns, where cash will always be advanced to facilitate every enterprise of the kind, and where the public can be supplied in any quantities; we refer, with pleasure, to the advertisement of E. S. Goss, on Commercial street, San Francisco. And we invite producers to make the acquaintance of this House, and shall always be happy to make known every means that will advance their interest.

The Great Sale of Merino Sheep.

We have taken pains to prepare a schedule of prices received at the sale of fine Merino Sheep, on Monday last, by Messrs. Poulterer, De Ro & Eldridge. The sheep, 347 in number (322 ewes and 25 rams), left Sydney in the British bark Jane Catherine, and were consigned to Messrs. Daniel Gibb & Co. Out of the 347 sheep only 100 arrived alive—ninety-six ewes and four rams. They were sold at public auction, in six lots, as follows:

NO. I.		
16 ewes, 1 ram,	brought $50 each, by J. Dunn, San José	$850 00
NO. II.		
16 ewes, 1 ram,	brought $41 50 each, by J. F. Osgood, San Francisco	705 50
NO. III.		
16 ewes, 1 ram,	brought $54 each, by Capt. Hood, Napa	918 00
NO. IV.		
16 ewes, 1 ram,	brought $50 each, by J. Dunn, San José	850 00
NO. V.		
16 ewes,	brought $28 50 each, by J. F. Osgood	456 00
NO. VI.		
16 ewes,	brought $28 each, by J. Dunn	448 00
Averaging $42 27½ each,		$4227 50

It will also be perceived that by estimating the difference in price of the several first four lots and the last two, we arrive at the value of the rams, and the price paid for them, which was as follows: No. 1, $394; No. 2, $249; No. 3, $462; No. 4, $402. This value or cost of the rams is ascertained by comparing the different amounts paid for lot No. 1, with a ram, and No. 5, without one. This sale was a most important one, for many reasons. It shows the certainty that wool growing will soon become one of the great interests of California, and it shows that importations of the best stock are sure to pay; although we hope everybody will not rush into it, to overdo it.

We should notice one feature in relation to these sheep—they are better than they look to be, having been out ninety days, whereas, in a good clipper, forty or fifty days would have been sufficient. It is a great misfortune to the State to have lost so many—two hundred and forty-seven.

There is quite a contrast in the success which attended the importation of the flock of the Messrs. Whitneys. They shipped 317 sheep—252 ewes and 65 rams—and 130 arrived safely (108 ewes and 22 rams). They started with thirty sheep less, and arrived with thirty more. These sheep have increased more than one hundred per cent., the past year; are now large, healthy and most valuable, as will be seen by the article which we publish in another column, to which we call attention. We should be glad to hear of the success of each purchaser at the late sale.

Harvesting Implements.

The great importance of good "Harvesting Implements," is beginning to be appreciated; in years past poor and indifferent machines were used, and many farmers imported their own machines, expecting to save fifty or a hundred dollars by the operation; but delays and extra costs in shipping, receiving, draying and re-shipping here have learned them that it is much cheaper to go to a regular importer here, at the season they want them and purchase the very best.

Farmers, too, have learned that the strongest and best machines only are the cheapest—and importers are now having machines made to order of extra quality and strength, especially for California. This is as it should be, and we have this week received the particulars of some most valuable machines now on the way to the house of Treadwell & Co., of San Francisco and of Marysville, whose well known reputation as one of the old and long established houses will serve as a guarantee that all who trade with them will receive good implements.

We also would notice that S. L. Palmer, Esq., formerly the house of Palmer & Co., Davis street, is now at the house of Treadwell & Co., and will give his time and his particular attention to the department of "Harvesting Implements;" his experience in putting implements together, and his general information will be of great service to purchasers.

Messrs. Treadwell & Co., will be fully prepared to furnish all the extras needed for machinery connected with agriculture, at wholesale and retail. Their large stock will give purchasers an advantage in purchasing of them. We refer our readers to their advertisements in our columns.

Engraved Plate of California Fruits. We have received a very beautiful colored engraving of the Fruit Piece, which was designed by Dr. Logan of Sacramento, of the splendid fruits exhibited by A. P. Smith, Esq., of the Pomological Gardens at Sacramento, at the State Fair holden there in 1855. The original design by Dr. Logan, was taken East, and a number of copies engraved in colors and finely executed. Sidney Smith, the brother of A. P. Smith, returned with them, and we are not only happy to receive this plate of California Fruits, but glad to welcome our friend again to the golden shores of the Pacific. We received also a fine engraving of the Dioscora Battata, showing this singular and prolific tuber in its growing state. For these favors we are very grateful.

California Raisins—Another New Product.—Smith's Pomological Gardens, at Sacramento, is entitled to the honor of producing the *first raisins* in California. Mr. Smith very kindly sent us in a small glass box of very handsome raisins, last week, and they are now exhibited at the Rooms of the Society, on Fourth street, Sacramento. Mr. Smith prepared two boxes, and we think he should be entitled to a special premium for this new product of California.

Report of the Wagon Road Committee.

We copy from the Globe, of this city, "the very interesting and able report of Dr. Hitchcock, of the Committee appointed by our citizens to transmit to Washington the mammoth petition, asking the passage of a bill by Congress for the construction of a wagon road. The report is a matter of much interest at the present time. The Committee have zealously labored in the work intrusted to them, and deserve the fervent and hearty thanks of this people. The report speaks of the strenuous efforts made by Messrs. Weller and Denver to give this road to California. These efforts have, no doubt, ere this been crowned with success, and the next steamer it is confidently expected will bring us the happy result. We give the report of the Committee, as follows:"

The committe appointed by a meeting of citizens of San Francisco, in the spring of 1856, to bear to the national capital a petition to Congress for the construction of a wagon road from some proper point in the Mississippi valley to California, having performed that duty, the undersigned, a member of that committee, deems it proper to report to the people of the State, in whose service he has been, the result, thus far, of the petition, and of his personal efforts in behalf of the contemplated enterprise.

On the arrival of the Committee in Washington, in May, the Pacific delegation in Congress were advised of our mission, and the memorial tendered to them.

Washington City, D. C., May 21, 1856.

To the Hon. California Delegation in Congress:

Gentlemen: Having been appointed a committee to present to you a memorial from the citizens of California, asking Congress to construct a wagon road from Missouri to our State, we beg leave to inform you that we are now at the National Hotel, and are prepared to commit to your care said memorial at as early a date as may be convenient. Will you be pleased to inform us at what time and place it will be convenient for you to receive it.

With great regard,
Respectfully, your ob't serv'ts,
J. H. Hill,
C. M. Hitchcock.

Mr. Weller replied:

Senate Chamber, 21st May, 1856.

Gentlemen: Your letter of this date, addressed to the California delegation in Congress, informing us that you have in your charge a memorial signed by some 70,000 residents of that State, and asking us when and where we will receive it, has been received. I am requested by my colleagues in the House, Messrs. Denver and Herbert, to say that we will, this afternoon, at three o'clock, P. M., attend at the room occupied by the committee on military affairs, of the Senate, for the purpose of receiving said memorial. Let me assure you that each one of us will exert our utmost energies to carry out the wishes of the memorialists in having provision made for the construction of a wagon road from the frontier of Missouri to the State of California.

I am, gentlemen, with high regard,
Your obedient servant,
John B. Weller.

To Drs. J. H. Hill and C. M. Hitchcock, committee.

The magnitude of the interests involved in the subject of the memorial, and the remarkable character of the memorial itself, being signed by more than seventy thousand citizens of California, awakened an unusual degree of interest and comment on the part of the press, the public, and all departments of government, and there appeared to be good reasons for anticipating early and favorable action on the subject by Congress. Mr. Weller, with commendable promptness and zeal, laid the memorial before the Senate, and advocated, with great ability, the appropriations and opening of the road. On the 26th of May he introduced the following bills, which were properly referred, and reported back without amendment, on the 27th:

A Bill for constructing a military road from El Paso, on the Rio Grande, to Fort Yuma, at the mouth of the Gila river, and for establishing military posts there.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the sum of two hundred thousand dollars, or as much thereof as may be necessary, be, and the same is hereby, appropriated, out of any money in the treasury not otherwise appropriated, for the construction of a military road from El Paso, on the Rio Grande, to Fort Yuma, at the mouth of the Gila river, to be expended under the direction of the Secretary of War, pursuant to contracts to be made by him.

Sec. 2. And be it further enacted, That it shall be the duty of the President of the United States to cause to be established and maintained, at convenient distances on said road, where it may pass through the country occupied by Indians, such military posts as may be necessary for the general protection of said road.

An Act for the construction of a Military Road from some point in the State of Missouri, via Great Salt Lake, to "Carson Valley Settlement," on the eastern portion of the State of California, and for the establishment of military posts and the sinking of wells thereupon.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the sum of three hundred thousand dollars, or as much thereof as may be necessary, be, and the same is hereby appropriated out of the money in the treasury, not otherwise appropriated, for the construction of a military road from some point in the State of Missouri, to be determined by the President of the United States, via Great Salt Lake Valley, to "Carson Valley Settlement," on the eastern frontier of the State of California, and for the sinking of wells on said route, to be expended under the direction of the Secretary of War, pursuant to contracts to be made by him.

Sec. 2. And be it further enacted, That it shall be the duty of the President of the United States to cause to be established and maintained, at convenient distances on the said road, where it may pass through the countries occupied by Indians, such military posts as may be necessary for the general protection of said road.

The measure could have been passed through the Senate at once, but our friends deemed it judicious not to press it until after the adjournment of the political conventions then soon to assemble, which necessarily would break in upon the regular course of legislation. On the 26th of June, Mr. Weller's bills were taken up and passed. They went to the House, and were referred to the Committee on Military Affairs. The friends of California were sanguine of getting the appropriations made before the close of the session; but their efforts to that end were greatly embarrassed by the schemes of the speculators who are ever hovering about the capitol, ready to turn to their own advantage any and every measure of a public character requiring the expenditure of money. The machinations of these people naturally created a suspicion in the minds of many friends of the enterprise that, should the appropriation be made, it would be absorbed without opening the road or in any way benefiting California. The spirit of sectional jealousy and party fanaticism was also unfortunately brought to bear upon the subject, and it was only by constant effort and the most consummate parliamentary management that the Senate Bill was reported back from the Military Committee of the House on the 16th of August, and only then with an amendment in the form of a substitute, as follows:

SUBSTITUTE.

A Bill for the construction of a Military Road from the western boundary of the State of Missouri, via Great Salt Lake Valley, to "Carson Valley" or "Honey Lake Settlement," on the frontier of the State of California, and for the establishment of military posts, and the sinking of wells thereupon.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the sum of three hundred thousand dollars, or so much thereof as may be necessary, be, and the same is hereby appropriated, out of any moneys in the treasury not otherwise appropriated, for the construction of a military road from some point on the western boundary of the State of Missouri, to be determined by the President of the United States, via Great Salt Valley, to "Carson Valley" or "Honey Lake Settlement;" on the eastern frontier of the State of California, and for the sinking of wells on said route, to be expended under the direction of the President of the United States, pursuant to contracts to be made by him.

Sec. 2. And be it further enacted, That it shall be the duty of the President of the United States to cause to be established and maintained, at convenient distances on the said road where it may pass through the countries occupied by Indians, such military posts as may be necessary for the general protection of said roads.

The object of the substitute was to obviate the sensitiveness of those who would not vote for the appropriation, if the road were to start from any point *in* the State of Missouri. The amended bill was referred to the Committee of the Whole, and it was impossible to get it up again previous to the adjournment, which took place a few days subsequently.

In this state of things, there was nothing to be done but to wait until the commencement of the winter session, and then return to the contest, when, it was reasonable to suppose, the fate of the measure would no longer hinge upon party prejudices. Immediately after the Christmas holidays (previous to which there is never anything done), I returned to Washington, resolved to use every possible means to get the appropriation made for one road at least. Being assured that it would be impossible to get the bill out of Committee of the Whole during the session, I gave up and proceeded to New York to take the steamer of the 20th of January for home. But, at the urgent solicitation of many Californians resident in New York, I concluded to return again to the Capital and urge the Pacific delegation to make one more effort for the road, that the emigration of the present year might enjoy at least a portion of the benefits contemplated by the bill. I had the honor of bearing and presenting the following memorial from our fellow citizens resident in New York:

To the friends in Congress of the Military Road to California and Oregon:

Gentlemen: The undersigned, citizens of California and Oregon, doing business in New York city, respectfully desire to join their petition to the wish so generally expressed, for the earliest practicable construction of a Military Road to the borders of California or Oregon. They consider such a road indispensable in the preservation of the integrity of this Union; demanded no less by every interest dear to the States they represent, than by the nation as an arm of defence—important for the protection of its citizens in time of peace, of absolute necessity in time of war.

Disappointed by the delay and uncertainty of the Pacific Railroad measure, and apprehensive for the fate of the Military Road Bill, they avail themselves of the kindness of their fellow citizen, Dr. Charles M. Hitchcock, to communicate to you their fears, and express the hope that you will do all in your power to procure its passage this session.

We have the honor to be, very respectfully, your ob't servants,

J. Howard & Son,	Wm. T. Coleman & Co.,
Row, Falconer & Co.,	Bond & Hale,
Gutton & Co.,	John M. Coughlin,
Bingham & Reynolds,	Adrian & Story,
Hiram Grimes,	John Mattoon,
Wells & Emanuel,	De Witt Kittle & Co.,
W. C. Annan & Co.,	John J. Earle & Co.,
S. Barstow,	Jewell Harrison & Co.,
J. B. Weir,	Wells, Fargo & Co.,
Freeman & Co.,	C. T. Huntington,
Eugene Kelly & Co.	S. B. Babcock & Co.,
Berford & Co.,	Johnson & Sargant,
F. & D. Fowler,	Conny & O'Connor,
G. W. Schenkberg,	Edward C. Kemble,
J. C. Treadwell,	James E. Birch.

I reached Washington on the 24th of January, and though discouraged by the gloomy prospect, a vigorous and united effort was at once made to get the bill taken out of the Committee of the Whole, which we considered equivalent to its passage. When satisfied that they had a majority, our friends moved a suspension of the rules to take up the bill. The reading of the bill was demanded, when the clerk through mistake read the original, starting the road from a point *in* Missouri, instead of the substitute starting it from a point on the *western boundary* of Missouri. This immediately aroused the old sectional feelings that helped to defeat us at the last session, and many of those whose support we had with so much difficulty secured, abandoned us, and, before the blunder of the clerk could be remedied the House refused to suspend the rules, and the bill was lost. Knowing, however, that we had strength enough to pass the appropriation in some form, we fell back upon another line of tactics, and after consultation, determined to secure, if possible, an amendment to a bill soon to be reported by the Committee on Territories, which would give us the same appropriations and substantially the same road, with the advantage of two branches starting respectively from Council Bluffs and Fort Ridgely, and uniting at the South Pass. Mr. Grow, of Pennsylvania, Chairman of the Committee on Territories, acquiesced in the proposed amendment to his bill, and it was conceded by all parties that there would be no organized opposition to the passage of our measure in that form

In view of the embarrassments and difficulties by which the measure was met at every stage of its progress, it was deemed advisable by the friends of California to waive the appropriation for the road from El Paso to Fort Yuma, until the other should be opened. But there is no reasonable doubt of the ultimate opening of both routes.

Without intending to draw any invidious distinction between individual members of Congress, who labored long and faithfully to secure this important work to California, I must remark that the State is particularly indebted to Mr. Weller of the Senate, and Mr. Denver of the House, for their untiring labors in the face of difficulties that cannot be appreciated at this distance from the capital.

In this connection, I may remark that I was charged by the Emigration Society in New York, with the duty of applying to the Secretary of War for military escort and protection to the emigration coming to California this spring under the auspices of the society. That duty I performed, and may express the well grounded conviction that the military assistance asked for will be granted—that the government will make provision for the protection of the entire emigration, whether the Road Bill is passed or not. It may not be inappropriate for me to direct the particular attention of the people of the State to the Society just referred to. Though yet in its infancy, it promises to become a mighty agent in the growth and prosperity of California and the Territories of the Pacific. It is eminently worthy of the support and co-operation of our people.

In closing this cursory history of the progress of a measure involving the most important interests of our country, it affords me great pleasure to be able to express the confident opinion that the Military Road Bill has become a law, and that the wisdom and importance of the measure will, in less than a year, be vindicated by the addition of at least 50,000 souls to our permanent population, by the overland route, and directly induced by the efforts that have been made to secure governmental aid and protection to emigrants.

(Signed) C. M. Hitchcock,
of the Committee.

The Fine Arts.

We republish at this time a notice of an artist's studio, and a work of art, worthy the attention of every lover of the beautiful and true. The artist himself has won unfading honors in this and other of his works.

It is one thing to paint a portrait that is a true likeness, and another thing to paint a portrait that shall be a likeness of the person or persons, and shall also present to the mind, in a clear and thrilling manner, the circumstances by which those persons were surrounded. The noble picture to which the article annexed alludes presents all these high artistic attainments, and we are pleased to present the views of a writer of years past, when the picture first appeared. We recollect our own feelings as we stood before it in 1853, at the second Agricultural Exhibition in this State, which we had the honor of making in the upper Musical Hall. This picture was kindly loaned to us from the Pioneers' Hall, and we felt it an honor to have it in our Hall of Exhibition. It was before we had the pleasure of acquaintance with Mr. Grayson and family—and before Mr. Grayson had commenced his labors in ornithology. We remember well how many thousands stood before the picture, to admire and to speak of the wondrous life of a California pioneer in his travels over the plains, and his sufferings in crossing the mountains; but if this picture has been admired in years past, and justly so too, it will be looked upon, in coming years, as a *chef d'œuvre* of art, and be the admiration of thousands more. If Mr. Grayson and family have been honored as early pioneers, and more so for those high excellences of character which elevate human nature, so will Mr. Grayson be esteemed, admired and honored for what he has accomplished and will yet accomplish, if life is spared, as an artist of high honor, linking his name and fame with the early history of California, with its hills and its mountains, its valleys and plains, for wherever the cry of the eagle shall herald the morning, or the lark shall sing the evening vespers, there shall the name of Grayson be remembered and cherished, linked with that of the noble Audubon, as a lover and worshiper of the beautiful in nature.

The following was published in one of the San Francisco journals, several years since:

We regard the study and proper appreciation of the Fine Arts, as an element of refinement, and the cultivation of high moral sentiment; and we are gratified to observe a growing taste for them in our community. Perhaps there is no other country in the world, possessing within itself so many diversities of scenery and character, as California; and certainly none in point of beauty, grandeur and sublimity. The artist and the student of nature, find here an ample field in which to exercise their imagination, and to call forth the most sublime conceptions of the human mind. It is the true student alone, who can properly appreciate what he has here presented to him; and none but the skillful artist, who can truthfully delineate it. We have several among us, equal to any task required from their profession; but our old friend, Wm. S. Jewett, of the National Academy of Design, in New York, has been the most successful of any that we have seen, in delineating the peculiarities of California scenery and atmosphere. He has just finished a large painting for A. J. Grayson, Esq.,—a name well known to Californians—commemorative of the emigration of that gentleman and his family, to this country, from over the plains.

The point chosen by the artist is a very happy one, and it materially assists in giving strength and effectiveness to the picture. After having passed through hardships innumerable, the pilgrims are presented on one of the peaks of the Sierra Nevada, in the outlet of a wild looking ravine that commands a view of the Sacramento valley. Here, the hero husband, parent and hunter, clad in buckskin, and with rifle in hand, first beholds the land of his future home. The rifle slightly supports the wearied frame of the pilgrim, and, with brow uncovered, he seems to thank his Maker, for having watched over and protected him in all his perils; while the eye dilates with pleasure and pride at the magnificent

scene which is thus suddenly disclosed to his view. The time chosen is the afternoon of an autumnal day. His wife, with the kindliest emotions stamped upon her classic face, sits upon a sterile rock, with her fond boy half leaning upon her shoulder; while the faithful horse, the partner of all their perils and hardships, is quietly nibbling the grass, away in the distance. The composition of the picture is complete, and combines within itself a whole history for future times. The foot mountains, in all their romantic and fantastic groupings, stretch away into the distance, to the plains, till the coast range completes the whole. The atmosphere is wonderfully represented, and the very peculiar, dry, hazy mists of early autumn, that hang over objects when viewed from long distances, is strikingly truthful. The likenesses are considered good. We, however, dislike the drapery of the female figure, though perhaps the artist has chosen the best for effect.

We understand that the picture can be seen for a few days, at Mr. J.'s rooms, in the old Alcalde's building, in the Plaza. We feel proud of it, as the work of a Californian, and hope the artist will continue to meet with that success to which his superior merits so justly entitle him.

New Music—From Horace Waters' celebrated establishment, New York:

Fanny in Her Grave—Song. Words by Wm. M Byars, M. D. Music by F. W. Smith.

Spare the Old Home of My Childhood—Song and chorus; by S. M. Grannis, of the Amphions—author of "Do they Miss me at Home."

May I not call you Mother now?—Music by H. G. Mason. Words by T. F. Clancy. A most touching and beautiful song.

We may be Happy yet—Ballad in the opera, "The Daughter of St. Mark." Composed by M. W. Balfe.

My Grandma's Advice—Song. Sung with great applause by the Tremaine Family. Words and music by Edward Kansi.

New Music—From Wm. Hall & Son, New York:

Just Out—Polka. Composed by Francis H. Brown. A most beautiful and unique colored illustration accompanies the sheet.

Some one to Love—Ballad. Sung by Mr. Percival, at Buckley's Opera House. Words by James Simmonds. Music by J. R. Thomas.

I have Waited for thy Coming—Ballad. Composed by Wm. Vincent Wallace.

Minnehaha—Or Laughing Water Polka. Comby Francis H. Brown.

Neighborly Call.—We were gladdened this morning by a kind call from our friend H L. Weston, Esq., editor and proprietor of the Petaluma Journal. It is always pleasant to greet our brother laborers, and to know they are succeeding in their enterprises. The Petaluma Journal is now well and firmly established in the confidence and good will of the people of that luxuriant section of country, and is worthy their generous support. Heartily do we wish success to it, and we hope our cotemporary will stir up the farmers in Sonoma county to an active County Association for agricultural enterprises.

Harvest Machines!!!

WE are now receiving our stock of Machines and Implements for the coming harvest, and having engaged the services of Mr. S. L. Palmer, we hope to give entire satisfaction to such as may favor us with a call for machinery this season.

We have—
McCormick's celebrated Reaper;
Burrill's do
Hussey's (Baltimore) do
Manny's do with Mower attached;
Palmer & Williams' do self-Raker;
Seymour & Morgan's do do
Ketchum's Mower;
Hall's Thresher, 8 or 10-horse power, with Smith's power—best power in use;
Pitt's Thresher, 8 or 10-horse power, with Pitt's power;
Spencer's do do do Perigo's do
Emery's 2-horse Thresher's, with tread power;
Smith's and Perigo's Powers, extra;
Single and Double Tread Powers, extra;
Revolving Horse-Rakes, 8, 10 and 12 feet long;
Grain Cradles, Sickles, Barley Rakes;
Hay Rakes, Hay Forks, Scythes and Snaths;
Steel Teeth Hay Rakes;
Fan Mills, Grist Mills;
French Burr Mill Stones—3, 3½ and 4 feet;
Boston Clipper Steel Plows—just received;
Eagle No. 2 Boston Plows;
Churns of all kinds, &c., &c., &c.
For sale at the lowest rates by
TREADWELL & CO.,
Corner California and Battery streets,
San Francisco.
N. B.—Any of the above named articles can be had at our branch store at Marysville. v7-9 tf

The Great Stump Puller.

WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.

It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.

It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.

The weight of it corresponds to the work and will range from 300 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.

Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!

It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO.

SPECIAL NOTICES.

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the Farmer, will receive prompt attention. v7-9 tf

BOOKS FOR GARDENERS.

Just received, at the office of the Farmer, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

☞ **CHRISTMAS GIFT.**—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.

v6-21 tf And 130 Washington street, San Francisco.

A PERFUMED BREATH

What lady or gentleman would remain under the curse of a disagreeable breath, when by using the "Balm of a Thousand Flowers" as a dentifrice would not only render it sweet, but leave the teeth white as alabaster? Many persons do not know their breath is bad, and the subject is so delicate their friends will never mention it. Pour a single drop of the "Balm" on your tooth-brush, and wash the teeth night and morning. A fifty cent bottle will last a year.

A Beautiful Complexion may easily be acquired by using the "Balm of a Thousand Flowers." It will remove tan, pimples and freckles from the skin, leaving it of a soft and roseate hue. Wet a towel, pour on two or three drops, and wash the face night and morning.

Shaving Made Easy.—Wet your shaving-brush in either warm or cold water, pour on two or three drops of "Balsam of a Thousand Flowers," rub the beard well and it will make a beautiful soft lather much facilitating the operation of shaving. Price only Fifty Cents.
W. P. FETRIDGE & CO.,
Franklin Square, New York.

Sale of the Superior Shorthorn Herd
OF THE LATE
NOEL J. BECAR.
To the Editors of the California Farmer:
DEAR SIRS: I wish to communicate through your columns, to the Breeders of Shorthorns, that I have been authorized, by the executors of the late Noel J. Becar, to dispose of his entire herd of far famed Shorthorns. We have also determined not to sell a single animal from that herd until JUNE, 1857, on the day of my annual sale, which generally takes place about the 20th.
Many inquiries have been made by letter, and otherwise, and I take this course to answer previous and future questions. A very full and explanatory Catalogue will be issued in due time, and very generally circulated to all my present correspondents, and as many others as may desire it.

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is ns' wha' an ha' done for oursel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promot s habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a trades man, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve! whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,346 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 630; between 20 and 30, 252; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

NORTHERN ASSURANCE COMPANY,
For Fire and Life Assurance at Home and Abroad.
Established in 1836—Incorporated by Act of Parliament.
Capital £1,250,760 Sterling.

SMITH BROTHERS & CO.,
Agents for California,
Corner of California and Battery streets,
v7-3 3mis San Francisco.

A Gardener at Shares.

AN excellent opportunity can be given to a good practical as well as scientific gardener, for a series of years. To a person who could command a moderate capital a chance will be given that is permanent, and certain to of paying very handsomely.

None need apply unless they can produce the very best testimonials as to ability and character, and one who is free from embarrassment, and can answer the advertiser fully.

A note addressed to "B. C." through the FARMER Office, with real signature, will receive prompt attention. v7-5 tf

A House and Garden Wanted.

A PRACTICAL working Gardener would like to take charge of some house and land, to keep it in order and improve it for one or two years, only requiring as payment the perquisites he could make by extra cultivation and sale of vegetables, &c., such as could be grown while keeping the place in order and safety.

Any person going East, or who wish a place kept in order for one or two years, without cost, can have satisfactory bonds that this will be done, if it is a good place, by addressing "T. Y. F." through the FARMER Office, with real name; then the advertiser will call on them.
☞ Please state where the place is. v7-5 tf

[Premium Manufactory.]
Hudson's Golden California Mustard.

THE proprietor of this manufactory would invite all who feel an interest in California productions to visit his establishment and examine his Golden Mustard. This article is made of California Seed of the very purest quality, and put up in tins of 10 lbs., 5 lbs, 3 lbs., 1 lb. and ½ lb., and in glass of 1 lb. and ½; and it can be had at prices lower than Eastern prices, and at the same time proved to be purer and better than the imported.

The proprietor also manufactures a very superior article of Salad Oil, to which he desires to call the attention of the public. Sample bottles of his make will be sent to hotels and large purchasers when desired.

For any further information regarding this Mustard, we refer to the principal business houses in this city.

Purchases at wholesale or retail are specially invited to call at the office,
22 Front street, corner of Pine,

[For the California Farmer.]

MUSINGS—NO. 2.

I saw on my window by morning's first light,
The fairy-gem'd frost work of a cold winter's night—
No palace Alladin could conjure of old,
Can vie with my castle, so pure, yet so bold.
The turrets lie white 'gainst the snow covered hill,
While encircling its base is the bright frozen rill:
The trees o'er the lawn their bare branchlets rear,
And sporting beneath them's the light bounding deer.

But the sun has arisen in splendor and might,
The frost work must vanish like visions of light:
So the castles of spring time are scattered and fled,
And the bright forms that peopled them, faded and dead.
In nought that is earth-born they bid us to trust,
For beauty and strength lie low in the dust:
One after another have faded away,
Like frost work they've perished in life's heated day.

CLARA WILDWOOD.

[For the California Farmer.]

The Devil in the Pickle Jar.

I had wheeled the center table in front of the tall bay window; taken a long goose quill from my portfolio, and whittled it with my pen-knife into the right shape for a "stylas," tried its tender point upon a sheet of foolscap that lay spread out before me; then commencing, as most ladies do when writing a newspaper article, with—"Dear Editor: The weather is delightful out here in the country! The birds are very musical, making every inmate at 'Sunny Dell" feel as exquisitely happy, as if he really enjoyed the luxuries of a Seventh Heaven (or *terra firma*); all hoping another winter would not come very soon again to *friz* the songs in the little warblers' throats!" Then as usual the strain of hyfalutin run in its usual channel of—"Oh! dear me! if you were only here this precious moment, to see the stars twinkle way up in the blue dome of Heaven? and what they are whispering about, who could ever conjecture! Pale Cyntha wading over her shoes through the little twinklers stuck here and there in the blue ether, smiling a look of approbation, just as though the queen Luna was a going to weep and sanction the vows of moonstruck lovers, with the Recording Angel at her elbow, writing down the truth of their plighted affection in that enormous gilt-bound ledger lying upon the Lord's writing table." Then came the rigmarole of how "delightfully our spring frogs are 'peeping' in the pond over yonder; it would do your heart good (no doubt) to hear those amateur vocalists sing their chorus of 'chugee, cho-chung-chee, bow-wow, pee-wet-pee, wet;' then tired out in imitating the Celestials(?), they plunge among the water-lilies, yellow cowslips and tall rushes, to recover breath, and hide their *blushing* faces." I had written thus far, when my mind became suddenly foggy, and as sad as the bottom crust of a cherry pie. Drawing the arm-chair closer to me, seating myself to renew my wasted faculties after so much sentimentality, I endeavor to manufacture words enough to finish this article before me. * * * * * *

When Morpheus gently whispered in my willing ear, softly saying, Let's take a promenade in Uncle Nod's garden. Just then I head the clock give thirteen hysterical strokes on the old cracked bell, which forcibly reminded me the medicine was at that time to be given to a sick friend on the couch in the far corner of the room. What, said I, can that ever faithful old timepiece mean by cutting up such a curious prank? A freak of fancy! said a voice in another end of the room. Taking the candle in one hand, and the medicine in the other, I noiselessly moved in the direction of the bed; carefully parting the curtains, as I had not heard her breathe for some time, I therefore conjectured she might have fallen into a sweet rosy slumber, from which she would soon awaken refreshed from its invigorating influence. *Shades of the departed!* how horrified was my soul, when by holding the light a little nearer, I saw she had expired! alone, as I then thought through my own negligence. I placed my hand upon her wide forehead, which made me start! for it was cold and clammy, and the dew of death had fallen upon those pure, chiseled, upturned features, looking beautiful even in the icy clutch of the grim monster, who was then tightening his iron grasp round the tender heart-strings. My first impulse was to scream for assistance to my parents sleeping in the adjoining bed-room—thinking Isabella might be brought to life again by some restorative. Walking tiptoe light to Emma B.'s room, I told her, after shaking her fifteen minutes or more, that Isabelle Stanford had just died or else was laboring in a trance. She got up in what I called an ill humor, and sullenly followed me to the room, where the outstretched, rigid, cold, straightened corpse lay in the embrace of death. She gazed with an unearthly look upon the sad spectacle before her—the gaze had all the fire of a chained demon; her black eyes kindled until they sparkled deep in the sockets. I was startled to hear her give such a fiendish, idiotic laugh, accompanied with the strange mystefying words: She isn't dead, Carrie; but the Devil is in the house, and has cast his frightful spell upon her, which bears the semblance of death. She then took from her pocket a small blue bottle of strong wine and held high above Isabelle's lowly head, and let drop a portion of it upon the wan, emaciated countenance, which to my infinite surprise hissed and burned upon her face, similar to the dropping of cold water upon a red-hot stove. You see, observed Emma, if I was a necromancer, and had a magician's wand, I could charm away this evil spirit that has cast his resistless influence upon every object in this house. Only look, said Emma pointing with her finger; how those curtains rise and fall at his bidding. The bed-clothes would lower themselves to the floor, then as if by some unseen hand would be drawn again to their proper place. I then knew why the clock was affected; it was the hour of midnight, just the time when ghosts and hobgoblings commune together and make an exit for the cold dreary churchyard.

The air grew densely dark and murky in the room, like that of the vaults in the cemetery, and the candle burned a bluish light, emitting a stifling sulphurous odor, which pervaded the whole apartment. Turning my head in the direction of the table, I saw six candles instead of the one that I had lighted in the earlier part of the evening; they reached three feet above the bright candlesticks, and four of the number were dancing "French-four," while one of the revelers was fiddling, and the other calling off the sets, at the top of his creaking voice. Allah, Mahommed, preserve me, said I, and as sure as I write it, felt myself bewitched. After a deal of necessary reasoning, that dreadful conviction flashed upon my bewildering fancy, with all the fury of a wild tornado. I tried to walk to the chair, when my feet felt like two large cannon balls, as I dragged one after the other, which for the first time had refused the command of go-aheaditiveness. I reached the chair, sat down, and passed my hand before my eyes, to shut out the hideous soul-revolting spectacle round me. I felt anxious to find out the great mystery of this singular commotion, and with a woman's inquisitiveness took a peep with my right eye through the half shut fingers, and what do you think I saw, dear reader? Why nothing more nor less than the candles nodding "address to their partners." There too stood "Boast," the old watchdog, keeping up a lively flirtation with Pussy, who had been partly transformed into a mermaid, with the fishy part of her dragging upon the floor, and her paw tremblingly placed within Boast's hand, with his own encircling her waist, they spun round the room, dancing the polko at a deal of a rate; stopping near my chair to catch breath, I heard Boast purr and saw him stroke his *goatee* upon his chin, with all the grace of a conceited dandy. Upon this the cat whined, and laughed a sickly laugh, so much like the Evil One, that her gaze penetrated the innermost recesses of my soul and indelibly fastened itself upon my overheated imagination, making me still more frenzied. Then the truth came to me that I was in the region of Death, for every object wore the vestment of despair and darkness.

The door gently opened, and in strode a man, who took a chair *vis-a-vis* to me, and commenced, without the least obeisance, a friendly *tete a tete*. I recognized him as belonging to the editorial fraternity, from the amount of books and papers he carried in a large leather pouch flung round his neck, crowded to its utmost capacity. This high-minded dignitary sat the bag upon the carpet with an air of importance, in the mean time telling me, with a grand flourish of his hand, that he had been a homepathic doctor, a country-school teacher, a clairvoyant, and as most people thought in those days, quite a gentleman. But since his sojourn in the Golden Regions, he had been a lobby member at the capitol, though he now labored in the capacity of an editor, and traveling agent to all the bookstores in the country. He then handed me a package of papers, which proved from examination to be Gen. Estell's speech; the honorable gentlemen from Marin saying it was thought to be very popular, which good qualities the Law-and-Order community said would no doubt secure him a four years' seat in the Presidential chair at no remote period. He partly smiled when I told him we had no use for the document to frighten away or kill the rats with, as a better poison could be bought at half the price at the drugstore, which the little epicures would eat if they had not become dainty of late. He gave a knowing wink out of his two gray eyes, and remarked that he was a Vigilance-Committee man at heart, but expected to settle in California, and preferred to remain *neutral*. With an air of gravity he said he was a third or fourth cousin to Fremont, and would some fine morning awaken to find himself in possession of a few hundred acres, as he had a *lean* upon the Mariposa estate when John C. and Jessie were numbered with those that are no more! as the latter could not survive much longer, from the effects of a severe cold contracted while accompanying her liege lord in his last political campaign. He must have thought me a great book-worm, for he tossed into my lap "Dred," exclaiming loudly that it too was also a very popular work, and the literati lauded it to the skies; furthermore that just across the *pond*, John Bull was taking on at a dreadful rate about it, and more than likely Harriet Beecher would be a spoiled child, being of late somewhat petted by the *royal family*. The rest of his bundle consisted of Longfellow's Hiawatha, and Old Block's Sketch Book; the latter I willingly bought, and he rose to depart. When he said: Madam, the the Devil's in the chicken-house. I listened, and heard a great fluttering in that quarter, the hens a crowing and the rooster's a cackling. I began by this time to be seriously alarmed for my personal safety, when the pickle jar moved into the room, the lid vibrating in the air a moment, then quietly settling itself over the side, the green pickles floundering and squirming snake like over the neck of the jar, then down on to the floor. He whispered in a snakish style that the Devil was in that jar, which had caused the disquietude of my peaceful home. I laughed at the idea of a Devil in a pickle jar; so I up with my foot and kicked it over. I felt something just then pinch my right side, which caused me to turn my head in the direction of the stranger, when—Gracious me! there stood an entirely different being than the one that had just addressed me. His long hoofs he stamped leisurely upon the floor with an air of nonchalence, and the sober twist of his necktie told me he was the Demon's imp. His head was bald except a substance like a rooster's comb, which extended from between the eyebrows to the back of his neck, and was completely perforated by large quills, where several were in their place for use, as he said it was less trouble than placing them behind the ear! Strange to say, I saw among the number of pens some that were made from the quills taken from the left wing of Cupid. His ears reached mule-like far above his head, which were pinned together at the top of his cranium with a large shot, and lapped over each other. His nose hung far down over a chin covered with a luxuriant growth of whiskers; his face round the mouth resembled an ox; his vest was mode of a spotted fawn skin, bound round with green morrocco, and extended down over his hip; one arm looked like a bear's claw, which he reached across his breast and catched his long crooked finger-nail in the buttonhole to fasten his coat.

My attention was then directed to the angry waves dashing against the house, that stood near the beach. A lurid light shot up in the heavens, and Neptune was abroad in all his fury; the monsters of the deep were roused, sleeping far down in the bottomless sea, which caused the waves to moan and chafe among the rocks. I tried to recollect where I was, but my ideas were quite confused and scattered. I reached down to pick up my handkerchief, when my hand came in contact with a large reptile that was gliding about the room, when it adhered to my wrist like your fingers to a frost bitten latch, which I flung heavily upon the floor. When, O horror!—how can I write it—there instantly sprung a quantity of large snake's heads upon the back of my hand, which felt so horrible and thrilling as I passed my warm palms over their scaly heads, I rushed to the door, but found it locked—I should die if I remained in that room another minute—I screamed, which awoke me, to find a cold perspiration standing upon my forehead in large drops; but I could not dispel the gloom that had enveloped my mind while in the "dream land," for all the agony of an eternity had been crowded into the space of an hour or two. It had been raining a slight shower, which caused me to dream of the tide beating against the house; but instead of my friends being in my California home, they were well, for aught I know, far away beyond the two dark oceans; and in place of the gloomy night of mental anguish, it was a gorgeous sunset hour, and Phœbus was giving her last kiss to the tall pines and distant craggy peaks of the Sierra Nevada, and fell with mellowing light upon the greensward and the peaceful world below.

The birds' song or the holy hour could not shake off the conviction that I had been dreaming, until I walked into the pantry and saw the pith of the joke in an instant; for the pickle jar stood in its own quiet corner, with a clean, white cloth spread over, and containing anything but the Devil within its strong walls.

ORDELLE *alias* "ALICE."

Farmers' Daughters.

Girls, don't look towards the city with longing eyes; if you would preserve the roses fresh in your cheeks stay in the country air and sunlight.

Don't persuade your fathers to sell their farms and go into town to deal in "dry goods;" if you do, they will probably lose farms, goods and all.

Don't ape city customs by wearing cloth gaiters when you walk; they are not suited to rough country roads; or by inviting an evening party of your neighborhood friends to meet at nine o'clock; for that is their usual bed-time.

When you would adopt a custom, ask if it is suited to country life, not if it is fashionable in the city.

Don't paint your faces; exercise and the fresh air will do that.

Don't stand in awe of a young lady "just from the city." I should rather look for a wife where there is less paste and paste-board, among farmers' daughters who have the glow of health on the cheek and the sparkle of intelligence in the eye.

Don't look upon city beaux as a superior order of beings; you know nothing about them.

Rest satisfied to be farmers' daughters; you know not what you would sacrifice were you to change places with the envied city girls. Go to work and make yourselves and your homes as attractive and lovely as you can.

Read and study and use all the means within your reach to cultivate your minds. Select from your associates of both sexes those who are equally aspiring with yourselves, and meet in social gatherings to improve your conversational talents, and perfect easy, unembarrassed manners.

Persuade your fathers to furnish means for supplying you with books and papers, and keep yourselves informed on the literature and history of the times.

Seek the acquaintance of those who are older than yourselves and have superior intelligence, that they may advice you in selecting your reading and other pursuits.

Cultivate the graces that shine brightest in the domestic circle, and make the farm-house warm with a genial hospitality that is unknown in fashionable city blocks, and make the farmers' daughters rich in qualities that are not found in the hollow heads and hollow hearts of fashionable city society.

Encourage your parents with loving attentions and willing hands, and they will in nine cases out of ten gladly assist you in your laudable efforts for self-improvement.

Make your homes tasteful with those little inexpensive arrangements which women can manage so well. Be not ashamed of being familiar with all the business of the farm-house; study and practice until all its duties can be performed in the most acceptable manner.

Associate your brothers in your pursuits and in your efforts to make your homes centers of intelligence and taste, and you will be proud that you are farmers' daughters. You will have done for the world a great and good work.—[June Isle, in Plow, Loom and Anvil.

Medical Wit.—"Doctor, do you think tight lacing is bad for the consumption?" "Not at all—it is what it lives on." The doctor's reply was wise as well as witty.

A Juvenile Query.—"Who took care of the babies?" artlessly inquired a little girl, on hearing her mother say that all people were once children.

The Mathematical Works of Professor Davies are too well known to require special notice. They are the text-books (in connection with those of Professors Church and Bartlett) of the United States Military Academy at West Point, and nearly all the colleges in the United States. The elementary Course of Mathematics, consisting of the revised editions of Arithmetics, Algebra, Geometries, &c., and recommended by the superintendents of public instruction of Michigan, Illinois, Missouri, Wisconsin, Minnesota and North Carolina, and are used in the best schools and academies throughout the United States. Clark's English Grammar, Willard's School Histories, Parker's School Philosophy, Fulton and Eastman's Book-keeping, and Monteith's and McNally's School Geographies are also the favorite books in each of the above named States, as well as in all parts of the country where they are used. v7-4 2m

Important New Works,

JUST PUBLISHED BY

D. APPLETON & CO.,

346 and 348 Broadway, New York.

I.

THE HILLS OF THE SHATEMUC. By the author of "The Wide, Wide World." 1 vol., 12mo., cloth, $1 25. The popularity of this work bids fair to more than equal the former work by this talented author.

II.

COMMODORE PERRY'S JAPAN EXPEDITION—Executed at the command of the American Government. Written out from the Journals of the Commodore and his Officers. By Francis L. Hawks, D. D. 1 volume, 8vo., with upwards of 200 Engravings. Price in cloth $5 00; ½mo, $6 00; full calf, $7 00; full morocco, $8 00.

This book, containing as it does, the record of one of the most brilliant National Expeditions ever undertaken, and illustrated by such varied illustrations, will become a standard volume for libraries. It is as interesting as a novel.

III.

A MEMORIAL VOLUME TO BISHOP WAINWRIGHT. Containing Thirty-six Sermons and a Memoir, by the Bishop of New Jersey. 1 volume, 8vo., with Portrait. Price $2 50.

IV.

MEMORIALS OF HIS TIME. By Lord Cockburne. 1 vol., 12mo. $1 25.

This volume presents to the reader a most graphic description of Society as it existed in Edinburgh towards the close of the last century.

V.

ELEMENTS OF MORAL PHILOSOPHY; Analytical, Synthetical and Practical. By Hubbard Winslow, author of Intellectual Philosophy. 1 vol., 12mo. $1 25.

VI.

PROGRESSIVE SPANISH READER; with an Analytical Study of the Spanish Language. By Augustin Jose Morales, A. M. and H. M. 1 vol., 12mo. $1 00.

VII.

MANDEVILLE'S NEW SERIES. THE FIFTH READER for Common Schools and Academies. By Rev. Henry Mandeville, D. D. 1 vol., 12mo. $1 00.

VIII.

CORNELL'S HIGH SCHOOL GEOGRAPHY; Forming Part Third of a Systematic Series of School Geographies, comprising a Description of the World; arranged with Special Reference to the Wants and Capacities of Pupils in the Senior Classes of Public and Private Schools. Embellished by numerous Engravings, and accompanied by a large and complete Atlas, drawn and engraved expressly for this work. By S. S. Cornell. $1 50.

Catalogues will be ready for delivery by the first of October. Consignments of Trees and Agricultural Implements attended to. J. R. RAY,
v6-9 90 J street, Sacramento.

DIOSCOREA BATATAS,

New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (Sorghum Sucre).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

CHINESE SUGAR CANE,

OR,

SORGHO SUCRE.

PURE SEED.

THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 50 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,
W. P. ORME, Atlanta, Georgia.
Atlanta, November 7, 1856. v6-22

SEEDS.

Garden Seeds.

THOSE who desire Garden Seeds of an extra quality, of any kind, can be furnished at the lowest rates by an order to us, with remittances for the amount desired, to which order will be added a handsome collection of New and Rare Seeds from the Patent Office, with full Reports of Agriculture and Mechanic Arts, *free of charge*, accompanying every order.

Orders sent to our Office at San Francisco or Sacramento will be promptly attended to. v6-24

The Great Giant Rhubard.

THE mighty Giant Rhubarb, of Wisconsin, will be offered on the arrival of the next steamer. Those who desire Roots of the same had better leave orders early.

For sale at the Rooms of the State Ag. Society,
v6-19 tf Fourth street, Sacramento.

Seed Rice.

A SMALL lot of new MANILA CADDY RICE, of recent importation, which is the most desirable kind for seed here, being a favorite Rice with the Chinamen. Persons in want of seed will do well to attend to it soon, as this is the only lot in market, or will be for the season, and, unless called for soon, it will be hulled and put into market in the shape of Rice.

WAITE & BATTLES,
v6-21 1m 154 Front street, San Francisco.

Seed of the Great Tree.

A FEW packets of the Seed of this famous Tree are for sale at the State Society's Rooms, on Fourth street, Office of the California Farmer. v5-13

Shell Mound Nurseries

AND

FRUIT GARDENS,

Near Brooklyn, Alameda county, directly opposite San Francisco.

THIS well known establishment is now prepared to offer to its patrons and the public in general, an extensive and varied assortment of Fruit and Shade Trees, Shrubs, Plants and Vines, comprising almost every article usually found in the Nurseries of the Atlantic States.

Our stock of Apple, Pear, Peach, Plum and Cherry Trees we believe is of a quality unsurpassed in California.

Catalogues, with prices annexed, will be furnished on application.

All orders, accompanied by remittances, will receive prompt attention. Please address

R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco;
Or, JASON L. SANFORD, Agent, Brooklyn.

P. S.—We expect to receive in December from 50,000 to 70,000 Trees, Shrubs, Plants and Bulbous Roots, from the East, on the arrival of which a supplementary catalogue will be issued. v6-15 3m

MEDICINES, &c.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.
I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.
Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for
Half the Price Usually Charged
By other Druggists, legitimate or illegitimate, and of
The Purest Drugs and Chemicals.

THIRDLY.
I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite propietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.
We Keep Open all Night!
And charge no more for medicines than in the day time.

FIFTHLY.
We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.
Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.
We have received the agencies for the following valuable articles:
Budds' Nerve and Bone Liniment, warranted the best in California.
Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.
Flower of the West, for Fever and Ague.
Delight's Spanish Lustral, for the Hair.
HUDSON'S CALIFORNIA GROWN MUSTARD.
Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.
We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.
v6-12 J. L. POLHEMUS.

PACIFIC MUSEUM,
Corner of Clay and Kearny streets.
INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!

THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Worf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.
Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.
A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montez.
☞ A full Brass Band is in attendance every evening
Open every day and evening (Sundays excepted).
*** Admission 25 cents during the Day, and 50 cents in the Evening. v7-2

FIRST PREMIUM AGAIN!

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.
Rooms, cor. Sacramento and Montgomery streets,
SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—
v6-14 R. H. VANCE.

EDWARD PELOUSE. JOHN K. RODGERS. DAVID WATSON, JR.

BOSTON TYPE FOUNDRY.

BOSTON TYPE FOUNDRY

THIS Establishment (the oldest in New England, having been commenced in 1817) is now carried on by the subscribers under the style of

opposite the Rassette House,
Between Montgomery and Sansome.
Also, Plate Glass, assorted sizes. v7-1 3m

MEDICINES, &c.

FOR THE REMOVAL AND PERMANENT CURE OF
All Diseases arising from an Impure State of the Blood or Habit of the System.

In this preparation are strongly concentrated all the medicina properties of Sarsaparilla, combined with the most effectual aids, the most salutary productions, the most potent simples of the vegetable kingdom; and the combination is such that one modifies and improves the other, producing a compound differing entirely in its character and properties from any other preparation, and unrivalled in its operation on the system when laboring under disease. It has been so fully tested, not only by patients themselves, but also by physicians, that it has received their unqualified recommendations and the approbation of the public and has established on its own merits a reputation for VALUE and EFFICACY far superior to the various compounds bearing the name of Sarsaparilla.

From the Army.

MONTEREY, CAL., January 18, 1850.
Messrs. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefited as I have been. I arrived here by the overland route, about the first of October last. A few days after I was attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely.
With high regards, yours, &c.,
J. H. MILLER, Lieut. U. S. A.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists and Chemists, 100 Fulton-street, corner of William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

CLOVE ANODYNE
TOOTHACHE DROPS.
Complain no more of Aching Teeth.

These Drops have been extensively used by thousands, whose experience has proved that the Anodyne will give immediate and permanent relief after the failure of every other remedy. It is pleasant to the taste and smell, and a few applications will entirely remove the pain and soreness from a decayed tooth, so that it may be filled and rendered as useful as ever. When the pain proceeds from the face, or from the gums around a tooth apparently sound, this Anodyne will give a speedy relief by rubbing a few drops on the part affected.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, No. 100 Fulton-street, corner William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v6-21 3m

The Farmer's Drill.
[PATENTED, AUGUST, 1853.]

THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct. 28th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.
Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.
This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.
For full particulars address

Family Groceries and Family Comforts.

A good Family Grocery, where all the necessaries and luxuries which are needed, and daily used in a family can be found, is, we might say, a public benefaction, and so it is; and when an establishment of this kind is built up by the sale of home products; when it becomes an engine of encouragement to those who are engaged in growing and producing from the soil, or in any domestic products by which the industry and wealth of the whole community is advanced, then it is doubly a public benefit.

During the past week we took occasion to visit a family grocery, of which we had heard much—many facts about the fine butter, lard, hams, &c., with which it had supplied the customers of the establishment; but we were hardly prepared to expect the amount of business done in these articles, by any one of our grocers, that we found at the store of Messrs. Reynolds & Law, corner of Kearny and Jackson streets, San Francisco. Upon making inquiries relative to the amount of the products sold, and their quality and value, particularly home products, we were kindly introduced to their business and freely informed relative to all that we desired; we were also shown their wholesale rooms on Jackson street, where all these great staples are stored, and where butter and lard is neatly repacked for family use.

This firm is composed of three partners, two at San Francisco, and one at Portland, Oregon; the latter is constantly engaged in preparing the supplies for their house, and we learn that they had caused to be packed in an especial manner 50,000 pounds of hams for family use, for San Francisco. We learn further that for the last eight or ten weeks, they have received from Oregon 110,000 pounds of hams, with butter, cheese, lard, bacon sides, etc., in proportionate quantities. Thus we see how much good is being accomplished for our State, for although a large portion is from Oregon, this house also have large quantities of California products; and it is upon such grocers that families should bestow their patronage. Messrs. Reynolds & Law's card will be found in our pages.

THE GREAT REPUBLIC.—This wonderful ship is now in our harbor, and looks a giant among giants. She is a monument of shipbuilding, and reflects great credit on all who have been interested in carrying on the enterprise. She brings to our port nearly 4000 tons of freight, and has made a fine trip (91 days from New York). Her freight list will amount to $35,000 or $40,000, and she has a contract from Callao home for near $80,000, to take guano. It is worthy of remark, that while the freight list for *merchandise* to this port was $40,000, the freight home will be double that amount, and this too for a *material for the farmer*—guano. The Great Republic will be visited by all who desire it, to-morrow (Saturday), by direction of her gallant commander.

A RESERVOIR BROKEN AWAY.—The large reservoir to the Middle Yuba Canal, near Sweatlands, Nevada county, broke away on Monday, doing considerable damage to property in the vicinity. The reservoir was known to be full, and the event was not altogether unexpected. The inhabitants of Sweatland's were apprised of the danger, and were awaiting it at the time of its occurrence. At half-past ten, writes a correspondent of the Marysville Express, the reservoir broke away, and the cry arose: "She's coming! she's coming!" and I hastened to place myself in a position to witness the rush and effects of the flood. First was heard a noise resembling distant thunder, then the crashing and falling of timber, then came the boiling torrent, carrying everything before it. The scene now presented was terrific. Nothing but the foundation rock itself could for one single moment impede the progress of the flood. Trees, logs, sluice-boxes, timber, &c., were dashed furiously along, and against such buildings, fences and bridges as were in their way, and on they went, in one conglomerated, rushing mass. The loss of property is considerable. I have heard no estimate; in fact it is impossible to make anything like a correct estimate at this time; suffice it to say, that everything at and below the reservoir is swept out clean down to the Main Yuba, and from below that I have not heard.

FROM THE SANDWICH ISLANDS.—Dates have been received to February 14th. Trade continues dull at the Islands. In the absence of shipping, the demand for goods is light, and confined principally to domestic wants.

The past winter in Hawaii, as in California, seems to have been one of uncommon severity—the most, says the "oldest inhabitant," of any since 1827. Rain in very large quantities has fallen, accompanied with terrific thunder and lightning.

The Hawaiian Flour Company have paid a dividend of 25 per cent on their capital of $16,000.

A sale of fruit trees and vines, imported from California by the Royal Hawaiian Agricultural Society, had been made at a rate covering the freight and charges; and the Advertiser urges the importance of continuing the importation regularly, varying the kinds of fruits until the Islands be fully supplied. The Peach trees from this State, sold at 75c. a $1 12½; Grape Cuttings, 37 a 43c.

COPY DEFERRED.—We have been obliged to defer many articles which were intended for this issue—on Bonded Warehouses, Foreign Merchandise, State Agricultural Society Meeting, &c., which will have due attention in next number, together with letters from the East.

SPECIAL NOTICES.—We hope our readers will find subjects for every taste in this issue. We have been pressed for room, and obliged to defer many special notices we had prepared for this number, but the reader will please make due note of all.

MUSIC TEACHING.—We desire to call attention to the special advertisement of "Melodia." Rarely does such an opportunity occur to secure the services of a teacher so happily qualified to perfect pupils.

COPY RECEIVED.—We have received communications from our former correspondents, Helen and Adda, which are most acceptable, and will be published soon.

THE BROKEN HARP-STRING.

"O sing for me that song once more."

The song it had ceased, but its echoes vibrated
O'er the heart of *one* listener, that, touched by its spell,
Had wandered afar, where fond memory created
A vision *that song* had recalled, but too well.

That song! every word touched a chord in the soul:
It awoke to new life scenes treasured, but past;
And it marked on the heart, like the blue waves that roll,
As *they mark* on the shore, where each wave touched it last.

When the last words were spoken—when that song passed away,
There came to my spirit a "musical token,"
And it spoke of "Sweet Dreams," that forever shall stay
Round the heart, and the harp, till their *last* strings are broken.

JULIES.

Refreshment Rooms.

We often notice as we pass through fashionable streets and great thoroughfares of cities, those places where eatables and drinkables are to be obtained are placarded as "Refreshment Rooms." In nine cases out of ten, they are directly the reverse; there is nothing refreshing about them: true, you may find "beef and potatoes," and other food that will do to masticate; and some other articles bearing fancy names; but a Refreshment Room, in reality, is a most desirable place in large cities, both for strangers and for citizens, and having often been REALLY refreshed, we shall speak of those that we find and describe what we mean by such a place.

Restaurant or Refreshment Rooms, both mean alike—they mean to restore! to REFRESH! To be restored or refreshed, when weary, or an hungered, requires not food only; there are other associations that being blended, accomplish even more than food. We mean the appearance of the place we may be in, the manner in which the food is served, and the neatness and attention of those who serve—these, to food, are the best "condiments"

A neat and convenient room, clean table-cloths and napkins, cleanly dressed attendants, who serve, not only promptly, but cheerfully—these are the pre-requisites of a "Good Restaurant," or "Refreshment Saloon," and those proprietors that regard these essentials, generally provide that other important thing "A Good Cook;" and when there is so much eating and drinking as there is in California, in our cities, we feel that there is much dependent upon these matters, more than meets the eye of a casual observer. How few even reflect upon the effects resulting from a meal, well or ill enjoyed. The former sends a person out into the world better prepared for duty, and more certain of success; every part of the man has been refreshed—mind, body and estate; he is richer, stronger, better-natured, happier; while the latter, is dissatisfied with all about him, cross, dispeptic, unfit for business or pleasure, and consequently unhappy. But we only intended to touch lightly upon these things, and call attention to those places where we have noticed these valuable requirements—and as such we shall always notice them, and try to secure their aid to our columns as worthy of being advertised, and we shall endeavor to show our patrons where they may be found.

We have now to notice with pleasure such a place as "Dan's Oyster Saloon," on Montgomery San Francisco. Although bearing the title of only one eatable, everything that the most fastedious or delicate appetite could ask, or any dish that good livers or the epicure crave, will be found at this excellent place; and then there is that neatness, cleanliness and comfort that makes one really enjoy his meals We are pleased to notice also that a fine saloon has been fitted up stairs for ladies, where the Oy's and all other dainties are supplied to ladies and families, and we are pleased to say it is worthy a generous support.

PROSPECTUS
OF
VOLUME VII.
OF THE
CALIFORNIA FARMER.

THE CALIFORNIA FARMER was established in January, 1854; its success was a problem that the future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the virgin soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer FARMER expected to meet with obstructions, trials and difficulties, that would try our strength and temper too. But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he must meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—so our humble selves in the enterprise of the journal we then presented, we had faith—we were willing and ready to labor and toil—to do and to suffer—confident that ere long the goodness of the cause we had espoused, its happy and beneficial influences, with dignity, nobility, and prosperity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good—to them we and our cause are known—our desert at their hands is manifest.

To those who are strangers to us and the journal we publish, we again present the CALIFORNIA FARMER.

Our journal is devoted to Agriculture and all the useful sciences—it will ever be our aim to have the Farmer the true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the TRUE friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Homes of our glorious State. Free from every political, sectarian, or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that our means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication, we have access to facilities for information rarely obtained.

In the department of Education, of Home Influences, we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artisans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall esteem most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it in comparison, and abide the issue.

With grateful acknowledgments for a generous sustaining in years of trial, and with the assurance to our patrons of many improvements in the opening year, we ask their continued favor and generous influence for this journal

The terms of the FARMER are, for the year (always in advance), $5.

BOOKS, &c.

The Fruit Garden.

By P. BARRY,

Of the Mount Hope Nurseries, Rochester, N. Y.

A TREATISE intended to illustrate and explain the Physiology of Fruit Trees; the Theory and Practice of all operations connected with the Propagation, Transplanting, Pruning and Training of Orchard and Garden Trees, as Standards, Dwarfs, Pyramids, Espaliers, &c.; the laying out and arranging of different kinds of Orchards and Gardens; the Selection of suitable Varieties for different purposes and localities; the Gathering and Preserving Fruits; Treatment of Disease, Destruction of Insects; Description and Use of Implements, &c. Illustrated with upward of 150 Figures, representing the different parts of Trees, all Practical Operations, Forms of Trees, Designs for Plantations, Implements, &c. 1 vol., 12mo., cloth. Tenth Thousand.

HOMES FOR THE PEOPLE IN SUBURB AND COUNTRY; Or, THE VILLA, THE MANSION AND COTTAGE. Adapted to American Climate and Wants. By Gervase Wheeler. 1 vol., 12mo., with 100 Engravings. Third Edition.

"Good taste, practical common sense, and an eye to the usages of the country appear throughout the work, while its designs and illustrations will prove an invaluable assistance to those who wish to build, and to build wisely and well."—*N. Y. Evangelist.*

"The author's study has been to furnish models for convenient, tasteful and even elegant suburban and country dwellings, from the lowest to a high cost, and to afford all the necessary information for their construction. We should like to see such books wide spread, as our national architecture needs improvement."—*Philadelphia Presbyterian.*

"There are abundance of books on architecture and on landscape gardening, but an actual absence of such another volume as the present. The designs are exceedingly tasteful, and imbued with the highest spirit of architectural beauty."—*N. Y. Express.*

Copies of either of these books sent by mail (post-paid), for $2, remitted to

The Most Successful and the Best.

NOW COMPLETE AND FOR SALE,

SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.

BY EPES SARGENT, author of "Standard Speaker," &c.

The following are nearly ready:

Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

HORTICULTURAL.

Commercial Nursery,

Three-Quarters of a Mile East of the City of San Jose.

THE Proprietors of this Nursery, having received the award of the

FIRST PREMIUM
OF THE
STATE SOCIETY

the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of

FRUIT AND ORNAMENTAL TREES,
For the Trade of 1856 *and* 1857,

that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.

Our Stock consists of

One Hundred Thousand Trees,

FROM FOUR TO ELEVEN FEET IN HIGHT.

Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;
TOGETHER WITH
Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.

Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.

Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.

Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.

Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.

☞ Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.

All communications addressed to the subscribers will receive prompt attention.

SMITH & WINCHELL.

v7-1 3m

Smith's Pomological Gardens
AND
NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast. Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Allanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—1,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

Catalogues furnished to applicants.

☞ Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.

Cans of superior kinds for Dairymen.

Just received and arriving by every Clipper.

S. L. PALMER,
v7-2 3m corner Washington and Davis streets

New Cultivator.

THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measures operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who want finely cultivated soil it has no equal.

Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.

All persons are invited to call at the workshop and examine it.

R. BEECHING, Manufacturer,
v7-5 3m 35 Pine street, San Francisco.

Hydraulic Hose and Pipes.

A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. Globe Pattern Rubber Stocks with and without Steel Rings. The whole coupling together in the most thorough workman-like manner complete for use placing in the hands of miners the most valuable gold washing apparatus ever yet introduced into the mining regions, and one which is destined to do more for the development of our mountain treasures, than all others yet introduced.

Orders per Mail or Express promptly executed.

BRYANT & CO., 63 Battery street.

P. S.—A full assortment of Rubber and Leather Belting. v7-5 2m

Agricultural Reviews and Essays---No. 6.

Practical Agriculture.

"The Farmer's Guide to Scientific and Practical Agriculture. By Henry Stephens, F. R. S. of Edinburgh; with an Appendix by J. P. Norton, Professor of Scientific Agriculture, in Yale College, New Haven." (Leonard Scott & Co., New York).

"Account of his own experience in Agriculture, by Alderman Mechi, London."

We have two classes of patriots in the United States—one who wish to raise this great country to a still higher elevation, by a system of exclusiveness, by encouraging, as they suggest, home manufactures, home industry, and talent of every kind which originates with ourselves, and has its birth in our own land—another, with more liberal ideas, and extending their sympathies and affections to the whole human family, who seem to adopt as their motto the noble sentiment of Horace, "*Homo sum, et nihil humanum a me alienum puto;*" of whom it may be said, in the words of the new poet Smith,

"As the air
Doth sphere the world, so doth their heart of love—
Loving mankind, not peoples."

It may be considered politic to belong to the former; but in the great "Republic of Learning, which makes a man," in the words of Sir John Herschel, "a citizen of every country, and a denizen of every age," even the stars, stripes, and eagles, those paraphernalia of the Great Republic of America, which we hear so much about in Fourth of July orations, also proud England's "flaunting flag," which, they say,

"Has braved a thousand years
The battle and the breeze,"

and the oriflamme and lilies of France, are mere toys for grown children, who have, it may be, been trained to love their respective countries, for reasons for which, as men, they ought to blush. The world of Learning is more catholic in its feelings, and more rational in its objects. It is not bounded by geographic limits, nor does it depend on cherished forms of government. It is cemented by a union of soul and sentiment, and admits no preference but what is due to mental superiority.

Where is there an American, worthy of the name, who does not glory in Dickens, and Scott, and Bulwer, in Goethe and Schiller, in Sue and Dumas, and an host of writers of the Old World, and blush for shame at some of the miserable stuff which he sees daily announced as $500 prize novels, by Miss A. B. C? or as he attempts to read the wonderful adventures (of similar origin) of some hapless lovers in Spain or Italy, who are imprisoned in dungeons for no earthly purpose, and whom some Blue-beard of a Marquis apparently means some morning to make a breakfast of? We may be great as fighting men, we may be great as inventors, we may be great shipbuilders, we may excel in the useful arts—but, for Heaven's sake, do not let us set up pretences of being learnedly great. It is true we have a few great writers who rank high the world over. We have Channing, Irving, and Noah Webster, whose claims none will dare to dispute; and we have Cooper and Mrs. Beecher Stowe, who find many admirers; but for the supply of reading matter for our intelligent citizens, generally speaking, we are dependent on foreign countries.

Among the many works on Practical Agriculture, published in Great Britain, none ranks more deservedly high than "Stephens' Book of the Farm," of which the former treatise on my list is a reprint under a different name. Mr. Stephens is both an elegant writer and a practical farmer, and in both respects challenges our admiration and respect. Never since the days of Virgil has any one attempted with more success to throw a charm over the irksomeness of field labor, or done half so much to teach Agriculture in the most pleasing manner. But Mr. Stephens is evidently a man who has been trained in the way in which all gentlemen-farmers in Scotland, who deserve the name of farmers, have been trained, by first learning to be a plowman, by doing the work with his own hands, and becoming a farmer on his own account, afterwards. This is as it ought to be. It is not by sitting down and reading agricultural, or other works, that a man can thoroughly know, so as to make it profitable, the art of farming, or any other art. And does the broadcloth of the captain of the stately clipper,

"That walks the waters like a thing of life,"

become him less that he has served a regular apprenticeship before the mast? Was Peter the Great of Russia less likely to be a good governor of his people, because he worked as a common carpenter in the Dockyards of Holland, and of England? When I was living in London, I was applied to by a wealthy English farmer, to select among my acquaintances in Scotland a suitable family where his brother, a young man, with a fortune left him by his father, of over $60,000, might go to learn Agriculture, practically, on the most correct principles. And the very first letter from his new abode told his friends that in the matter of raising Turnips, alone, the Scots were so superior to the English, that he doubted whether a good turnip crop had ever been raised in his own country.

For which reasons, I would caution all amateur farmers, even with Stephens' Book of the Farm in their hands, to reflect whether they can dispense with that great pre-requisite to good farming, *a competent knowledge of the business by personal practice.* Yet Mr. Stephens does as much as man can do. He does not proceed with methodical dullness to give a dry detail of the different kinds of work that has to be performed on the farm, nor does he make a treatise in dictionary form, which the reader, who is at a loss on any particular subject, may consult for better information. He divides the labor of the husbandman, as Nature divided it for him—by the Seasons; and takes out the reader, as his pupil, to show him how the workmen on the farm are severally employed. He shows how the horses are harnessed, and how they are yoked to the plow; how the first furrow in each new land should be drawn, and how the last concluding mold-furrows are laid one on each side, and the advantage of doing so. He shows the proper proportion of the furrow-slices, and how the plow is managed to make the furrows turn over with precision and neatness. He also takes you to where the men are at work manuring the land; shows you how many to put to filling the carts, and how many to spreading manure. And so on with every department of Agriculture, so correctly and truly, that the practical Scottish farmer feels, while he reads his book, like the Macedonian conqueror in his cups, who

"growing vain
Fought all his battles o'er again,
And thrice he routed all his foes,
And thrice he slew the slain!"

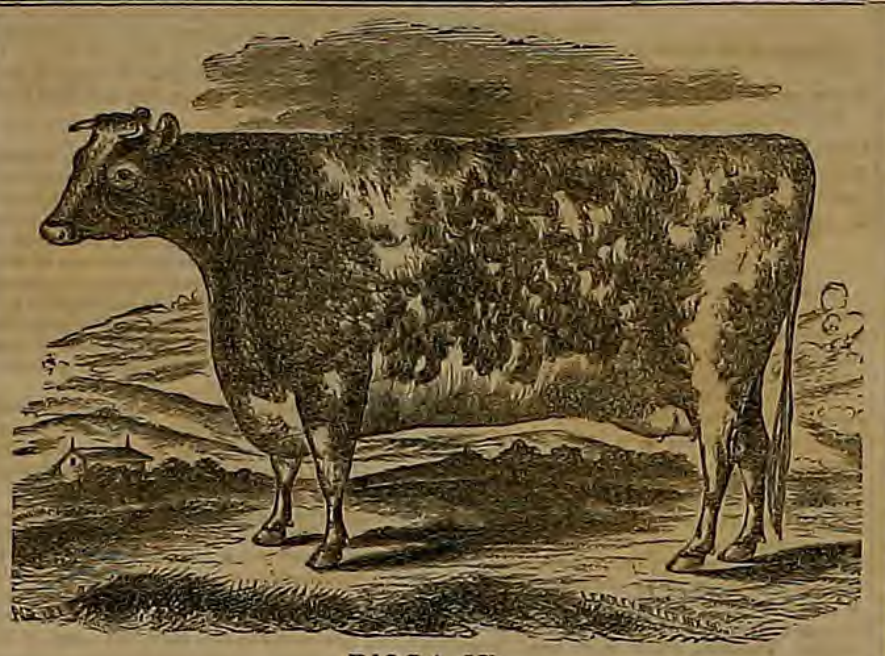
So bewitching is his style, and so fascinating to a really practical man the interesting subject on which he treats, that it is barely possible for him to lay aside the work without a second or third perusal.

I do not say that the young farmers of California should go to Scotland, or to New England, for the purpose of learning Agriculture practically, according to the newest and most approved methods; but at the present time, when the propriety of a better education for our young agriculturistsis generally believed in, I would seriously recommend ☞ to those who have the interest of our young State at heart, the establishment of a Model Farm, such as Monsieur Fellenberg established at Hofwyl, in Switzerland, as an excellent and beneficent institution. It is not, as I have remarked, by putting in the hands of would-be farmers treatises on Agriculture, however good, that practical Agriculture can possibly be taught or acquired. No better proof of this could be adduced than is shown in the experience of Mr. Mechi, as he tells it himself, and as it is known to his neighbors.

When I was in London, I picked up a partial acquaintance with the worthy "knife-grinder," who is an excellent, an enterprising, and very wealthy man; and learned from his own lips, as well as from his pamphlet, a great deal about his agriculture that was truly extraordinary. On a certain occasion, having mentioned that I had some acquaintance with him, to two Scotch friends; one of whom was an extensive Miller and Flour-factor of London, and also proprietor of a small estate in Scotland, worth some ten thousand dollars a year; and the other an extensive agriculturist in one of the best agricultural districts of Scotland; they evinced a strong desire to be introduced to Mr. Mechi, and also to pay a visit to his farm at Tiptree Heath, in Essex, which is distant some forty or fifty miles from London, and not far from one of the Stations on the Great Eastern Railway. Accordingly I called on Mr. Mechi, and told him briefly the object of my visit. He was very courteous, and seemed not a little flattered by the interest which my friends took in his Model Farm. He also told me, that if we would defer our visit a few days he would be at the farm himself; but, meantime, to prevent disappointment, as I could not assure him on that particular, he gave me a note to his bailiff, with instructions to show me and my friends over the farm.

We concluded to wait a few days, and were repaid by finding, on our arrival at the farm, that Mr. Mechi was there before us.

Mr. Mechi was very kind, and had the politeness to say, that he would avail himself of the



HILPA IV.

Roan; calved April 9th, 1851. Bred by George Vail, Troy, N. Y. The property of S. P. Chapman, Mount Pleasant Farm, Clockville, Madison county, N. Y.

Got by Duke of Wellington (3654); (bred by the late Thomas Bates).

Dam [Hilpa] (imported) by Cleveland Lad (3407).

g. d. (Hawk Eye) by Red Rose Bull (2493).

gr. g. d. [Hart] by Rex (1375).

gr. gr. g. d. Bred by Mr. Richardson, of Hart, Durham, England, from an old and celebrated milking tribe of shorthorns.

Hilpa 4th was winner of the first prizes at the Fairs of the New York State Agricultural Society, held at Rochester, in 1851, and at Utica, in 1852, in her respective classes.

opportunity which the Fates had put in his way, of getting information on Agriculture—the Scotch farmers being, as he said, the only farmers in the world who knew anything worth listening to. Of course my friend and I bowed, and thanked him for the compliment. But Mr. Mechi would have it that it was no compliment, but the simple truth. I repeated my thanks, and said that I much respected him for his manliness, and was determined to imitate him, by telling him truly if I found anything faulty in his system. He agreed, on condition that he should be allowed to dispute my opinions—to which I could have no objection. These preliminary terms being arranged, we four proceeded to inspect the farm.

The original aspect of Tiptree Heath, as described by Mr. Mechi, was that of a poor weeping clay in an exposed situation, which before he purchased it was scarcely of any value. Since then Mr. Mechi has built, at great cost, an elegant Mansion House, and the farm which is small (being only about 160 acres) takes now the name of the mansion—Tiptree Hall. To render the farm valuable Mr. Mechi has spared no expense, and has been at a very great outlay in draining, some of his drains being fully twelve feet deep. This he considers of great advantage, as thus the roots of ordinary plants, according to his theory and investigations, reach to a far greater depth than they would otherwise do, and the soil, in consequence, is rendered pervious to atmospheric action, without the necessity of trench or subsoil-plowing. I do not recollect how many thousands of pounds Mr. Mechi said he had expended in this department alone.

He particularly pointed out to us his best crop, which he considered one of the most suitable of green crops, in consequence of its having a long tap-root running deeply into the soil, and thus tending to improve it in the manner stated. He also showed us his crops of beans, which looked well, and which he was anxious to let us know were growing on some of the worst land on the farm, which, before it was drained, would not have produced the seed.

As I saw that my farmer-friend showed some hesitation in giving his opinion of Mr. M.'s method of farming, I concluded that I would be frank with him, and told him that I considered his whole system wrong, and conducted in such a way as would neither be satisfactory to him as a landlord, nor remunerative to him as a farmer.

Instead of proceeding to adopt the Elkinsonian and other methods of deep draining, as he has done, which are only suitable where there is a comparatively thin stratum of clayey soil, as his was an upland farm without any substratum of gravel underlaying the clayey surface, it was evident to any practical farmer, that the proper way to treat it was by adopting the "Thorough draining" of Mr. Smith, of Deanston, who is, both theoretically and practically, one of the greatest farmers in Europe. I told him so; but Mr. Mechi maintained that he would yet be recognized as a greater farmer than Mr. Smith. At all events, I made a few calculations for him—showing him that by adopting Mr. Smith's system the land could have been drained much more effectually at one-half of the expense, and been sub-soiled into the bargain; and that by applying the extra expenditure of his own less perfect system, for manure, he would have been able to have brought his farm into the very highest state of cultivation, and made it produce more than double the crops it was then doing, without a greater outlay; and, if prudently managed, without expending so much.

As I was rather getting the better of Mr. Mechi in the argument, he seemed pleased when an able auxiliary, in the person of a Dr. *Somebody*, who, Mr. Mechi told us, was his Sir Oracle in Agricultural matters, came to his relief. The Doctor at once broke new ground, and spoke learnedly and chemically, like a man of science, but was so very deficient in practical experience that he made any number of mistakes, which I pointed out to him. But when I proceeded to show Mr. M. and him, that on the *scientific* grounds assumed by the Doctor, the system of which the two gentlemen were such strenuous advocates, was indefensible, he seemed perfectly astonished that a common Scotch farmer should know anything of such matters. At last Mr. Mechi good naturedly remarked, "I say, Doctor, you had better give it up, for I tell you, these Scotch farmers know as much about these things as the professors of our Universities."

So far as Mr. Stephens is concerned, the remark of Mr. Mechi is perfectly applicable.

Agricola.

The Agriculture of Oregon.

Portland, Oregon, March 2, 1857.

To the Editors of the California Farmer:

Gentlemen: Thinking you might desire a few items respecting whatever transpires in Oregon, I offer the following to you and your readers' notice:

Oregon, although but a few years settled yet, is progressing prosperously and has abundant resources to make it not only an Agricultural, but also a Commercial country. Gold, Silver, Lead, Copper, Iron, and Coal, exist in quantities and extend over large tracts of the Territory, as also in Washington Territory, and while their mineral riches have not yet been fully tested, there still exists proof sufficient that Oregon and Washington Territories are second only to California in mineral wealth—while their argicultural capacity is on the whole superior to California, south of San Francisco.

Recently large tracts of Cranberries have been discovered on and near the Cowlitz and Chealis rivers, in Washington Territory; while quantities of Cranberries are annually gathered at Clatsop plains and Tillamook in Oregon. Some efforts have been made to cultivate them in other parts of Oregon, and have proved very profitable, whether raised from seed or sets; but more information seems to be required by those who have attempted their culture than they at present can obtain.

Millet, also, in Oregon, has its advocates, and not without good (aye, the best) reason, for forty bushels of seed, and two to two and a half tons of hay to the acre have been raised from the first year's crop off land plowed once carelessly for the first time. Here it makes splendid chicken feed, and good nourishing hay for feed—and it seems more fortunate as respects grasshoppers destroying it, than Timothy, Redtop, Clover, or natural grasses.

But another drawback to the commerce of Oregon, over and above the want of proper information on certain subjects, is the want of capitalists, who will start and aid in the building of Manufactories and carrying on of Manufactures of various kinds. Soap and Candles are imported, which with a capital here could be manufactured at two-thirds the cost at present paid. Sheep could be raised here with very little trouble, but we want woolen manufactories to make the sale of the wool advantageous to the sheepraiser. Limestone is to be had, but laborers' wages are high, and capitalists of the right stripe few—so it is also imported. We have only one Foundery in the Territory, and iron ore plentiful in several districts; but no capitalists engaged in the business. Added to these wants, which are only shadowed forth in the above recital, we have a so-called semi-monthly mail (the Columbia), for which service the P. M. Company receive a heavy yearly payment; but allow me to ask, how is this service performed? Capt. Dall, instead of hurrying the steamer on her way to Portland, detains her fifteen miles below that place in order to land an agent of his, who proceeds ahead of the steamer and purchases the flour at low prices, in advance of the steamer's arrival—to the exclusion of competition and fair and honorable trading; thus detaining the mail, preventing a legitimate trade, and forestalling the market—thereby injuring the Oregon farmer, or exporter, by preventing the trade and traffic of Oregon, to flow in its proper and legitimate channel; and at the same time taking this flour on board the Columbia, in preference and to the exclusion of other freight, although a bill of lading had been signed, and at this last trip of the Columbia, freight was left open and exposed on the wharf, after the leaving of the steamer. Thus having the flour in his own hands, he inflicts a two-fold wrong—as above on the farmers of Oregon, and secondly on the consumers of flour in California; in the first instance making use of his capacity as Captain of the Mail Line to monopolize the right of freight in the Columbia steamer to the exclusion of the Oregon merchants, who not feeling sure of a quick return for the capital invested, in consequence will not pay the farmers of Oregon as high prices for their breadstuffs as they otherwise would; while in the second instance the merchant traders of California cannot feel safe or assured of a return order by the steamer, and by such outrageous forestalling on the part of Capt. Dall the consumers, whether Mechanics, Miners, or Farmers, of California, have to pay a higher price for flour or bread—he preventing immediate competition, having the only steamer running on the route.

Lest my letter should prove too long, I draw to a close, with a wish of success to every

Agriculturist.

Improvement of Tule Land.

Cosumnes, March 12, 1857.

Messrs. Editors: Among the mass of valuable information which I weekly read in your valuable Farmer, I find an article from the Michigan Farmer, headed "First Crop for Improved Marsh Lands," and although the remedy there recommended may answer in Michigan, my experience with California Tulé Lands inclines me to adopt a different course. I would not recommend "thin first plowing," for Tulé or Marsh Land. A heavy sod or a thick coat of manure buried eight or ten inches deep before the heavy winter rains fall, by its acetous fermentation during decomposition, preserves the crop from the effects of the summer drought.

A year ago last fall, as soon as the ground was wet enough to plow, I broke up, with a large breaking-up plow, a piece of Marsh and Tulé land, drained it, and let it lie until the last of March, when I harrowed it well both ways, and sowed it with buckwheat and harrowed that in well. The harrowing did not turn over or disturb the furrows or sods, further than the harrow teeth penetrated them; this left the ground smooth and level, without rolling. The buckwheat came up very quick, entirely covering the ground; it choked the young tules before they attained any considerable hight. The crop was a good one; and the ground was left in excellent condition for subsequent crops. I prefer buckwheat to any other crop, to subdue Marsh and Tulé lands, because it keeps the land clean without the labor of repeated plowing or hoeing, and leaves it un*impoverished* and ready for any other crop with but little expense after the first breaking up.

This land is now sowed and planted—part is sowed to wheat, part to peas, and the remainder is planted with corn and potatoes. The present crops look very fine.

I plow bottom land very deep, and lay the furrow flat and smooth, or level, or roll it until it is level before harrowing it.

Yours, very respectfully, O. Duncombe

Nevada Mining.—From every portion o county we have encouraging accounts fr miners. We have heard of no remarkab strikes" within the past few days; but far better, the miners are generally do business. Water is abundant thro' county, and the present bids fair to prosperous mining season we have h years. The amount of gold dus town and sold during the past unusually large, and business of ginning to look up.—[Nevada

[For the California Farmer.]

Quartz Mills and Quartz Mining.

MESSRS. EDITORS: You have not taken the position in favor of the Mechanical pursuits that I wish to see you occupy. I wish to see your journal stand at the head of the two great classes of man known as Agriculturists and Mechanics. Your paper has been principally devoted to the interests of the Agriculturists, and now the time has arrived when the Mechanical pursuits must be heard from and looked after. One of these classes cannot prosper without the aid of the other, and since they are so intimately connected we should have a journal that will be the exponent and advocate of both together, and then the Workingmen of the country will soon look upon the FARMER as their best friend and adviser, and it will be as one of their household gods, to whom they can always look for direction and counsel in all the industrial pursuits of life.

If the Mechanics do their duty, they will enrich the columns of your paper with dissertations upon every branch of Mechanics. The Miner will have his business discussed in all its various branches; the Quartz Miner will see descriptions of all the different plans for crushing and amalgamating gold ores; the Foundery-man will have his models represented and the character and quality of his materials fully and truthfully stated; the Coppersmith will have his work fully advertised; the Machinist will have the nature of his work specified, so that every one will know where to apply for his machinery; the Ironmen will have their stocks described and advertised, so that we can know where to get our supplies—the *sizes and lengths* of their iron should always be stated; the Tinman will inform us through your columns what kind of wares he has for sale; the Provision Merchant will tell us where to find the staff of life; the Merchant will tell us where to get our boots, hats, and clothes; the Banker will tell us where to deposit our *surplus cash*, and where we can get drafts on our Eastern cities; the Steamboat-men will find it to their interest to advertise their regular days of sailing, so that we may know when to go home or when to expect our friends from the East; and in fact if the *Workingmen of the State will recognize your Journal as their Organ*, you may rest assured that all other pursuits will be clamorous for a place in your columns—and ere long you will have to make room for them. The Farmers of the State have acted nobly in establishing and sustaining your paper—now let the Mechanics and laboring men come forward to the work, and we will soon put the FARMER at the head of newspaperdom on the Pacific Coast.

I have said thus much for the general good of all classes of the country, with the hope of getting them to combine their efforts for the development of the vast resources of our State, and in my estimation the first great step towards so desirable a result, is, to *all agree upon a mouthpiece*, so that our wants may all be made known through one medium; by this means we will soon become acquainted with each others wants, and thus know how to supply them.

I will now confine myself to my proper subject, and leave it for you to elaborate my hints in your editorial columns—at your leisure.

As I stated in a former article, I am engaged in the business of Mining Engineering, at present in Mariposa county, and I find that in my branch of business there is much to learn, especially in the mode of crushing and amalgamating gold ores. It is very disheartening to go to our principal mills and see the slovenly manner in which they are constructed; the sands from the mortars are allowed to splash all over the machinery and get into the journals and bearings of every part of it, and thus rasp it to pieces in a few months. This defect I have completely overcome, and can now construct a mill perfectly free from splashing, so that the bearings of the machinery will last as long as in a sawmill or any other kind of mill; everything works with certainty and efficiency, and all that I now lack to make my quartz mill the best in the world, is a perfect amalgamator. Can't some of our Mechanics get up a machine that will amalgamate gold ores, with certainty and economy? Let's all go to experimenting, and see who can get up the best amalgamator for exhibition at the Mechanics' Fair, next August.

I shall be there for one, and shall bear off the prize if I can. Will my brother Millwrights and Engineers try also? I hope they will, and he who excels in this one thing, deserves to be immortalized in the list of the world's great men; for I can safely assert that there has been more ingenuity and more money expended to make a good amalgamator, than have ever been expended upon any one thing in mining operations: something *cheap, simple, and efficient*, is what we want—something that will be in the reach and means of every Miner. I have entered the list for the construction of a *Premium Amalgamator*, who will try it too? Let us all try, and perhaps some one of us will hit upon a plan that will do.

I propose to the Quartz Miners to get up models for stamping and crushing mills, as well as amalgamators, and send them to the Mechanics' Fair next summer, and we will then see which is best; and then when men wish to invest their capital in quartz mining, they will be able to select the kind of machinery that experience proves to be most efficient and economical.

I have completed the mill for E. L. Beard, Esq., upon my improved plan, and it has been running one week, with very satisfactory results. The machinery is simple and plain, and works with as much regularity and certainty as a clock; no stoppage, no detention, everything snug and in its proper place.

The timber of which this mill is built was growing in the forest sixty days before its completion, and that too in the middle of the winter, when the teaming was very bad, the days short, and other facilities very poor; and I venture the assertion that the mill can be run for twelve months without one week's detention.

You see by this time, that I am setting my mark pretty high, and if my brother Miners don't mind, I shall give them a hard brush for the Premium Quartz Mill of the State. I do not wish to run the race alone, however, but hope to have numerous competitors for the *Prize Mill of California*, which *ought to be the Prize Mill of the World*. More anon.

Very respectfully, &c.,

J. E. CLAYTON,
Mining Engineer.

JOHNSONVILLE, Mariposa county, March 4, 1857.

Trees and Plants suitable for California.

WE continue our selections from the Patent Office Report, in regard to different varieties of Trees and Plants which, we believe, would be found well adapted to our climate and soil, and we hope will be introduced into California.

THE BOX-WOOD TREE.

(*Buxus sempervirens arborescens*) is a hardy evergreen shrub or tree, indigenous to many parts of Europe and Asia, and has proved itself well adapted to the climate of the United States. In its natural habitat it seldom exceeds twelve or fifteen feet in hight, with a trunk from six to eight inches in diameter; but, in a state of cultivation, it sometimes attains double these dimensions.

This tree is found abundantly in Turkey, particularly on the shores of the Black sea; but a great portion of the box-wood of commerce, sold in the European and American markets, as "Turkey" box, is grown in Circassia and Georgia, whence it is brought to Odessa for shipment. It is also found in various parts of Persia, China, Cochin-China, and, from some statements, in Japan. This tree, which is of great longevity, and subject to but few diseases, is sufficiently hardy to stand the open air near Philadelphia, without protection during winter, where it has attained the hight of twenty-five feet, with a trunk two feet and a half in circumference, or about ten inches in diameter. It may be propagated from seeds, by cuttings, or by layers. When allowed to grow freely, it produces an abundance of seeds, which should be gathered as soon as the capsules appear to open, and sown immediately in light, rich earth, consisting chiefly of vegetable mold well drained.

The principal use to which the wood of this tree is applied in this country is for engraving, for which purpose it is admirably adapted; and, for the finer class of illustrations, there is no wood which can be employed as a substitute. Hence, as in the case of the cork-oak, should non-intercourse between this country and the Old World ever occur, we should soon be without a supply of this useful material, which is a strong argument for extending its culture by establishing plantations of it on some of the waste lands of our Middle and Southern States.

THE EUROPEAN SWEET CHESTNUT.

(*Castanea vesca*) a native of Asia Minor, but cultivated in the temperate parts of Europe and Africa from time immemorial, has proved itself well adapted to the climate of the Middle and Southern States, when grafted on stocks of the American species, and is deserving of extended culture in this country for its fruit.

The two most desirable varieties of this tree, cultivated in France, are "La Chataigne verte du Limousin," which produces very large, excellent nuts, of a rich creamy flavor and aromatic odor, when roasted, that will keep a long time, and the tree of which preserves its leaves green much longer than any of the other sorts; and "La Chataigne exalade," the fruit of which is the best of all common chestnuts for the table; but, although the tree is low, with spreading branches, it is such an abundant bearer that it soon exhausts itself.

The principal countries in which the chestnut is employed as an important article of food are the south of France, Spain, and the north of Italy, where it serves, in a great measure, as a substitute both for potatoes and bread. In Spain, it is produced in such abundance as to be, not only a common food of the peasantry, but an article of exportation to the more northern nations. The quantity of chestnuts consumed in Great Britain and Ireland exceeds 20,000 bushels per annum.

The usual modes of cooking chestnuts in France and Italy are, boiling them in water, with simply a little salt, or with leaves of celery, sage, or any other herbs which may impart to them an agreeable flavor; and roasting them, in hot ashes or in a coffee-roaster. They are occasionally scorched before the fire, or on a shovel; but, when thus prepared, are not considered so good. In whatever way they are roasted, the French cooks previously slit the skin, or shell, of all except one; and, when that cracks and flies off, it is an indication that the rest are done.

THE GRAMMONT OR SWEET-ACORNED OAK.

(*Quercus Gramuntia*) formerly a native of the wood of Grammont, near Montpelier, in France, and growing wild at present in great abundance in some of the forests of Spain, is quite hardy, maturing its acorns in England, where it has been introduced; and would be a desirable acquisition to our Middle and Southern States.

Captain S. C. Cook (now Captain Widdrington), who paid great attention to this oak, when in Spain, remarks of it as follows:

"This species is quite distinct from the Q. ilex, its nearest congener. The leaves are thicker, more rounded at the point, of a dull glaucous green, and the tree altogether is of a more compact and less graceful form than the Italian ilex. The great and essential difference, however, consists in the acorns, which are edible, and, when in perfection, are as good as, or superior to, a chestnut. To give this sweetness, they must be kept; as, at first, they have a considerable taste of the tannin, like those of the other species, which disappears in a few days, and accounts for the skepticism of some writers, who assert that both sweet and bitter acorns are the product of the same tree, and that their sweetness is no character. These are the edible acorns of the ancients, which they believed fattened the tunny fish on their passage from the ocean to the Mediterranean—a fable only proving that the acorns grew on the delicious shores and rocks of Andalusia, which, unhappily, is no longer the case. Remains of them, however, may still be traced in the West; and they fattened the swine which produced the celebrated salt meats of Malaga and that vicinity. These are the bellotas which Teresa, the wife of Sancho Panza, gathered herself, in La Mancha, where they grew in the greatest perfection, and sent to the Duchess, wishing, instead of their being only the best of their kind, they were the size of ostrich-eggs. I have frequently seen them produced by individuals, and offered to the company as *bon-bons* are in some countries, with a sort of an apology for their intrinsic value, from their flavor and size. This species is, beyond question, very hardy, I believe even more so than the ilex of Italy. It ascends the sides of the sierras in the inclement region of the centre of Castile; and, in Arragon, is seen within the limits of the *Pinus sylvestris* and *P. uncinata*, as also in the cold and wintry valley of Andorre. The widest forests of it are now in Estremadura, where the best sausages and other salted meats are made from the vast herds of swine which are bred in them."

As a proof of the hardiness of this tree, Dralet mentions that he found it growing on the crest of the mountains of the Andorras, where the snow covers the ground during several months of the year; and this circumstance, he says, explained to him the reason why the kings of Spain had succeeded in getting it to grow in the park at the Prado, near Madrid, where they had tried to cultivate the olive in vain.

THE KERMES OAK.

(*Quercus coccifera*), a low, bushy, evergreen shrub, much resembling a holly in miniature, a native of the south of Europe, and well known as producing the "kermes," or scarlet grain of commerce. Although there has been but little demand for this article since the discovery of America, in consequence of the cheapness of cochineal, this shrub, doubtless, could be cultivated in favorable locations in the Middle and Southern States, on which could be propagated the kermes, somewhat after the manner they are at present in Turkey and the Levant.

This production was known to the Phœnicians, before the time of Moses, under the name of *thola*; and to the Greeks by the appellation of coccus, and to the Romans that of *coccus baphica*; hence the origin of the word "Coccinati," the persons who wore robes that were dyed with the kermes. Previous to the discovery of America it was employed to a great extent in dyeing a very rich blood-red, which is of so permanent a nature, that the old tapestries of Brussels, and other parts of Flanders, although manufactured more than two centuries ago, have lost none of their richness of tint. Since the settlement of America by Europeans, it has been supplanted, in a great degree, by the Coccus cacti, or cochineal. The kermes, nevertheless, is still extensively prepared in some parts of Spain, as well as in the East; and Bancroft states in his "Permanent Colors," that, with a solution of tin, which is used with the cochineal, the kermes is capable of imparting a scarlet quite as brilliant as that dye, and perhaps more permanent. At the same time, however, as ten or twelve pounds contain only as much coloring matter as one pound of cochineal, the latter, at its ordinary price, is more economical.

The kermes (*Coccus ilicis*) occurs as a parasitic insect, having all the appearance of a berry or seed, exhibiting not the slightest indication of its insect nature, being immovably affixed, in clusters, to the branches of the oak, upon which it subsists, by introducing into the substance of the stem a long and delicate haustellum. It is only at the close of its existence, however, that it assumes the form of a seed. Although the insect is provided with two legs, and, when young, possesses locomotive powers, yet, after impregnation, it greatly increases in size, and the eggs are deposited beneath the body; so that, by degrees, as the eggs are excluded, the two surfaces of the body come together and form a covering for the eggs; hence, it will be observed that it is only the females which are collected for traffic; the males, in the perfect state, being minute, active, two-winged flies, totally unlike their inert partners.

In the natural state, the kermes are of a shining appearance, and of the color of a plum covered with a whitish bloom. In the condition in which they are brought to market, they appear of a dull reddish-brown, which is not, of course, the natural color of good kermes, but is imparted to them by steeping in vinegar. The inhabitants of the countries where these insects are obtained, distinguish three stages in their existence. In the Provencal language, the term "Le ver" is applied to them, when they are in the earliest stage of activity; "Le ver couvé," subsequently, in the month of April, when they become stationary; and "Le ver commence d'éclore," in the last stage, in the middle or towards the end of May, when each female insect is found reduced to a skin, covering its brood of eggs to the number of 1,800 or 2,000.

The crop of kermes is more or less abundant, according to the mildness or severity of the preceding winter; when, therefore, there has been little or no frost, and the weather has been generally mild, a good yield is expected, which is not obtained every year; and, as there is no trouble in planting or otherwise attending to the management of the trees, after they are once established, and as no other instruments are required for collecting the kermes than young finger-nails, it may be reasonably supposed that the harvest may be an inexpensive one. The kermes are usually collected in the morning before the dew is off the oaks, as at that time their leaves and prickles inflict less injury to the hands. An experienced person will thus pick two pounds each day. It is stated that the price of the kermes decreases considerably, according to the period in which they are gathered. Those earliest collected are the most valued, and the later ones less, in consequence of being lighter than those first obtained, owing to the young insects having escaped. The merchants who purchase the kermes, immediately steep them in vinegar, and then expose them to the action of heat sufficient to destroy any remaining vitality in the young. This process changes their color to a bright-red hue, for which they have so long been celebrated.

THE GALL-NUT OAK.

(*Quercus infectoria*), a native of Persia, Asia Minor, Arabia, Egypt, Morocco, and Algeria, in its natural habitat, is an evergreen shrub, with a crooked stem, and seldom attains six feet in hight. From the circumstance of its growing near Paris, where it bears the winter quite well in the open air, though losing its leaves in the autumn, it doubtless would be adapted to the climate of our Middle and Southern States.

On this shrub, it may be unnecessary to state, is found the well-known "gall nuts" of commerce, which are extensively used in the manufacture of writing-ink, and in dyeing. These excrescences are the product of the gall-fly (*Cynips scriptorum*), a small insect of a dale-brown color, which may often be found inclosed in the galls sold in the shops of the druggists, collected before the fly had made its escape. The natural history of the family to which this insect belongs may be given in a few words, although the physiological nature of the changes that take place in the action of the juices of the plants attacked by them, whereby galls of a very great diversity of form are produced, has not been ascertained. The female cynips is furnished with an instrument, or ovipositor, of a curved form, which, in most of the species, is concealed in the abdomen, with the extremity only slightly exposed. After impregnation, the eggs are deposited by means of this boring instrument, which is exsertile, within the leaves or twigs of various trees and shrubs; shortly after, the galls are formed on the outside of the attacked part, the eggs being forced from the place where they were originally deposited, and occupying the center of the newly formed gall, which is generally of a fleshy nature, and serves as food to the young grub when hatched. The pupa state succeeds, and is passed either within the gall, as in the insect now under consideration, or in the earth, the larva having previously to its change eaten its way out; soon after, the insect assumes its imago or perfect state. Hence, it will at once be obvious that a gall from which the insect has escaped must necessarily contain less of the astringent principle than one which has its interior less consumed by the insect remaining inclosed therein; and hence it is that there are two kinds of gall-nuts known in commerce: those which still contain the insect, and are known in the trade under the names of "Black," "Blue," or "Green" galls, termed *yerly* by the natives of the country in which they are collected; and those from which the insect has escaped, and which are called "White" galls. The latter contain not more than two-thirds of the astringent qualities of the former, and are of a pale-brown or whitish color, being not so heavy and less compact.

Should this insect ever be propagated in any part of the United States, it would necessarily have to be brought over in the gall-nut, in the larva state, and then at some period after the introduction of the oak itself, unless it should be found that the flies, after coming out, would deposit their eggs on some of our native oaks, on which they might succeed.

Points of a Breeding Mare.

THE mare from which the farmer intends to breed, must be free from disease of any kind; carcase roomy, barrel wide, large, and round formed, with the ribs curving from the back; the short rib "well home," or leaving a small space between it and the hook bone; thighs deep and muscular; bone of the hind legs flat and thin, clean of rank hair, and must have no appearance of swelling or any kind of thickness; feet clean, firm, and sound; pasterns short, but not thick and greasy; the arm in front wide and brawny; chest deep; shoulder oblique and sloping backwards at the withers, and shortening the back; neck rising in an arched form from the withers, and drooping a little from the set-on of the head; crest strong and firm, and thickening downwards; ears long and fine, and quick in motion; eye prominent, quick, bold, and lively; face broad between the eyes and tapering to the muzzle; cheek-bone not very broad, which shows coarseness; muzzle small; lips short and thin; nostrils expanded, but neat; fore-legs standing well forward, and not under the belly of the animal; bone clean, and short in hair; feet standing concave, and not flat; knee-joints flat and broad.

A heavy belly or a great depth of rib is objectionable, showing a great quantity of offal to be carried about in a loose state, in the shape of guts and entrails. A main point in breeding lies in reducing the size of useless parts, and in getting rid of unnecessary appendages, and the lightness of offal ever forms a point of excellence. Huge bulks must be reduced, and it always formed a leading point with our first breeders to reduce the size of the animal, in order to acquire symmetry and compactness; it being an invariable law of nature that bulk is always attended with a corresponding degree of coarseness.

No organ in the animal body shows the results of a superior organization more quickly or more durably than the eye; in every case of breeding it is prominent, pert, and lively, and forms a point of great importance in the selection of animals. When the body is in a state of inaction, the visual organ should appear placid and easy; but when any symptoms of exertion are required, the eye must give the first signal, and communicate to the other parts the intelligence that the time of action has arrived; and these parts must be ever ready and willing to obey the summons, by being closely knit and joined in combination, compact and ready for action, and not loose or disjointed, or far between. A horse may be called society in miniature, the component parts of which must be refined for action and polished for use, and adjusted so that each part assist the other in the most direct, the most rapid, and the most precise combination. These qualities are obtained under the name of "spirit and action," and proceed from a superior organization, produced by the assorting and joining the similar parts in combination.—[Essay on Rearing Farm Horses, by J. D., in Farmers' Magazine.

DEFEAT OF PATENT EXTENSION SCHEMES.

The following, from the Washington correspondence of the Philadelphia North American, comments very properly and forcibly on the prospects of reviving and renewing two of the antiquated monopolies which have been urged upon Congress:

"The vote in the Senate, yesterday, upon the applications of Hussey and McCormick, for the extension of their reaper patents, ought effectually to settle their pretensions now and hereafter. McCormick's original patent being obtained before the existing law, covered all the elementary and substantial principles belonging to former inventions. Still it needed something to complete its practical value, which was found in the two special patents under which he is now working, and realizing a profit of at least $150,000 a year.

Not satisfied with this success, he has followed Congress for years past, asking a revival of the original patent, which was declared to be public property in 1848. That concession would subject every manufacturer who has applied his own improvements to the reaper, to such a tax as McCormick might impose.

There were 50,000 machines made last year, and a fee of $20 each would insure him a million a year, independent of his income from existing patents. Hussey's reaper stands upon nearly the same principle, though the case has more meritorious circumstances connected with it. Merely technical pleas have been put in by both parties, to carry their point before Congress, and though repeatedly rejected, they have turned up again and again, until their selfish importunity has become both provoking and insulting. It is now hoped that they have bored Congress for the last time; for even some of the members who were disposed to be friendly, have been disgusted by the obtrusive pertinacity with which the object has been pursued. It is estimated that a thousand or fifteen hundred of these reaping machines were used in Pennsylvania during the past year, and that the number will be largely increased during the present one. The subject is, therefore, one of interest to the people of the largest wheat growing State in the Union."

State Agricultural Society.

AT a meeting of the Executive Committee of the State Agricultural Society, held at their rooms, March 10th, 1857, the following gentlemen were present: Dr. J. C. Cobb, Wm. S. Daniels, San José; Wm. Garrard, San Joaquin; Andrew Wolf, Geo. H. Sanderson, Stockton.

The Committee were called to order by William Garrard, Esq., the first Vice President.

On motion of Mr. Daniels, the Committee went into an election of a President, to fill the vacancy caused by the resignation of C. M. Weber, Esq.

William Garrard, of San Joaquin county, was unanimously elected as President of the Society.

Dr. E. S. Holden was unanimously elected to fill the office of first Vice President, made vacant by the promotion of that officer to the Chair.

Tuesday, the 29th day of September next, was chosen as the day to commence the State Fair.

Geo. H. Sanderson and Dr. J. C. Cobb were chosen a Committee to lease the room which has heretofore been used by the Society.

The Committee took a recess for one hour.

At 11 o'clock, A. M., the Committee were called to order to hear the report of the Committee on Room, who reported that they had made arrangements to lease the room for six months, from the first of March.

The Secretary was instructed to procure a sign for the Society, and have it placed over the door of the Society room.

Dr. Cobb was authorized to pay the premiums which have been awarded, but not paid, and that the Doctor present his account to the Secretary.

The Committee adjourned to meet in Stockton, on the first Wednesday in May next.

WM. GARRARD, President.
GEO. H. SANDERSON, Recording Secretary.

Wagon Roads to the Pacific.

BY the steamer Sonora, we have the following important information:

A bill has passed the Senate and House of Repesentatives, appropriating $300,000 for the construction of a wagon road from Fort Kearny, in Nebraska, via the South Pass of the Rocky Mountains, to the eastern boundary line of California, near Honey Lake—the said road to connect with and form an extension of the road already authorized from Fort Ridgely to the aforesaid South Pass. The sum of $200,000 is also appropriated for the construction of a wagon road from El Paso to Fort Yuma, at the mouth of the Gila river; and $50,000 for the construction of a wagon road from Fort Independence, New Mexico, to the Colorado river.

The appropriations are both practical and useful, as they contribute directly to available lines of communication between the Mississippi Valley and the Pacific Ocean. If these roads include the digging of wells for water at convenient stations in the deserts to be crossed, and military stations here and there, at points affording a margin of soil capable of cultivation, and then, with a plentiful supply of camels, the great traveling public will have a mode of conveyance long needed, and which they can manage with till such times as the Pacific Railroad is finished—if that is ever to be. The President signed the bill on the 18th of February.

A Yankee Restores to the Russians their Fleet.

IT will doubtless be well remembered that when the late war broke out, and the Allies menaced Sebastopol, the Russians sunk their fleet in the harbor, both to prevent its being taken, and to close the mouth of the channel. The vessels sunk were sixteen war-steamers, four 120-gun *ships*, fifteen 84-gun ships, nine frigates, and numerous brigs, schooners, transports, and merchantmen.

An American engineer has now contracted to raise the wrecks. The enterprising contractor is J. E. Gowen, of Boston, who raised the wreck of the steamship Missouri, in the harbor of Gibralter, under contract with our government. This wreck had laid eight years in that harbor, and the British government made continued attempts to remove it, until the English engineers gave up in despair, and reported that human ingenuity could not free the harbor from that danger. The British Cabinet then requested that the government of the United States would take the matter in hand, and it sent out a live Yankee, who effected the desired purpose in sixty days, under contract for fifty-nine thousand dollars. This achievement was looked upon with great surprise in England.

When Mr. Gowen reached Moscow last summer, to lay his proposals before the Russian government, he found the ground already covered with French and English engineers, some of whom had been there for months. He called upon Duke Constantine laid before him the report of the English engineers, stating the removal of the Missouri from the harbor of Gibraltar to be impossible, and Marcy's certificate that he had done it in sixty days, at a very low price. "You are just the man for me," said Constantine, and in twenty-four hours the contract was signed, and our Yankee was on his way to Sebastopol to survey his ground. The Russian government placed a small steamer at his disposal, and showed him how the operation of sinking the ships had been done, and the Boston man said he guessed he could return pretty nearly half of them in good order, and clear away the remainder.

He is now making his arrangements in this city and in Philadelphia. All the machinery will be prepared and shipped from Boston for Sebastopol early in the spring, and will be accompanied by a large corps of American engineers, ship carpenters, and so forth.—[Bos. paper.

SUISUN VALLEY.—A writer in the Solano county Herald, states that this Valley will produce an abundance of every thing this season, and there will be no cause for complaining. Large fields of grain, such as wheat, barley and corn, are coming up finely. We will also have a large quantity of fruit, from the looks of things. The trees are full—aye, loaded down with blossoms. In the orchard of Mr. Alford, the peach trees look finer and are bearing more blossoms than I have ever seen in any other State. And the day is not far distant when we can boast of as fine orchards as any county in the State.

A NEW AGRICULTURAL BUSINESS.—In Piesse's Art of Perfumery, there is thrown out an idea which is exceedingly pleasing. It is embodied in these words: "We desire to see flower farms and organized perfumatories established for the extraction of essences and the manufacture of pomade and oils, of such flowers as are indigenous, or that thrive in the open fields of our country. Besides opening a new field of enterprise and good investment for capital, it would give healthy employment to many women and children. Open air employment for the young is of no little consideration to maintain the stamina of the future generation."

A LEGEND OF THE MINES.

BY EMILY P. LEDERNIER.

[We present our readers with the following Gem, written for the Alta, by the lady whose thoughts flow as sweetly and as smoothly as the beautiful poetess of Louisville, Kentucky, and whose poetry will ever be as radiant in memory as the bright bow of promise immortalized by her pen. The hardy miners will ever keep alive a kindly remembrance and lasting esteem for one who has spoken so truthfully and so beautifully, for the hardy toilers in our mountains and river beds:]

A traveler from a far-off land,
In search of gain to the golden strand
Of Calis came, where the famous bands
Of miners sift the golden sands;
Digging and delving under the mold,
Peering deep for the yellow gold.

Many were there with feverish dreams
Of dragging up from the countless streams
The lustrous spirit which ever seems
Like a false god's smile—with its subtle beams,
Deep in the gulches, and under the mold,
Luring the searcher after the gold.

On a mountain's brow in the waning light,
The traveler paused with well-pleased sight,
Prospecting the ground before the night
Should settle down with its shrouding might,
And fall, like a vail, 'twixt the miner's toil
And the face of his idol under the soil.

And the web of the sleeper's dream was strowed
With golden flowers in a golden road—
With a golden scythe he cut the gowd,
And bathed where the pure Pactolian flowed;
And then he washed from the yellow tide
Gold enough to send for his bride!

But here a voice at his cabin door,
Drifted the happy dream to the shore;
And to real life he woke once more,
And sighed as he murmured o'er and o'er,
Deep in the gulches, and under the mold,
I must delve and search for the flashing gold!

The traveler rose at the dawn of day,
And swept the bright curls from his brow away,
For he, too, as on the rock he lay,
Had a vision of woman's entrancing sway;
But he woke to pursue, wilful and strong,
The mania fierce of the miner throng.

Not in the surface claims he plied,
But sharply he drilled in the mountain's side,
And the sparkling quartz, with its shining pride,
Told a tale of the boundless wealth inside,
And delving and drilling with pick and bore,
He tunneled a path to the bright-eyed ore.

Thus dimly he wrestled along the track,
And never his soul did fear or slack, [back,
For home-thoughts and love-dreams no more came
But his mind forever was on the rack,
To sluice and sever, and mass the gold,
Bedded so pure in its crystal fold!

Among the workers a whisper ran,
That fearfully pointed at the man,
For he grew to ignore the human clan,
And the human on him had fixed a ban,
For strangely when hovered the thick-winged night,
He wandered alone to the quartz claim hight.

There, underneath the pregnant hill,
Where the virgin gold was forming still,
With his peerless treasure he tarried at will,
And the clang of labor rang terse and shrill,
As delving and drilling with pick and bore,
He tunneled a path to the bright-eyed ore.

But the word went forth, that unhallowed rays
Lighting the cavern, meet his gaze,
Of thrilling whisperings thro' the maze,
And flickering gleams in the labyrinth ways,
And a spirit-maid, with sunlight hair,
That beckoned him on to her golden lair.

And he, worshipping, listened to the magic words,
For she promised him gold in uncounted hordes,
And he loved the maid, and he worshipped the gold,
And he followed her steps with a step as bold,
Till he felt the heart of the mountain beat,
And he saw where the veins and arteries meet.

And he knew he had wounded a living thing,
And he sought to flee from the mortal sting,
Which the vengeful spirit hurled at his soul;
But never more to the human goal
Might he backward turn! While ages roll,
Sweet memories' bells will echoless toll.

'Neath the heart of the mountain,
Where many a fountain
And silvery river are dashing unseen,
There, where the waters are rushing and flushing,
The gold-seeker sleeps in a Lethean dream,
Unwaked by the glories that over him gleam;
And the golden veins forever are gushing,
Hidden deep in the precious sands,
That never are reached by the miner's hands;
But many a thought
On his brow is wrought,
As digging and delving under the mold,
He peers so deep for the yellow gold.

THE NEW CALCULATING MACHINE.—As an instance of the wonderful extent of the power of the calculating machine called the arithmometer perfected by M. Thomas, of Colmar, after thirty years' labor, we now state that it can furnish in a few seconds products amounting to 999,999,999,999,999,999,999,999. A marvelous number, comparable to the infinite multitude of stars which stud the firmament, or the particles of dust which float in the atmosphere. The working of this instrument is, however, most simple. To raise or lower a nut-screw, to turn a wince a few times, and, by means of a button, to slide off a metal plate from left to right, or from right to left, is the whole secret. Instead of simply reproducing the operations of man's intelligence, the arithmometer relieves that intelligence from the necessity of making the operations. Instead of repeating responses dictated to it, this instrument instantaneously dictates the proper answer to the man who asks it a question. It is not matter producing material effects, but matter which thinks, reflects, reasons, calculates, and executes all the most difficult and complicated arithmetical operations with a rapidity and infallibility which defies all the calculators in the world. The arithmometer is, moreover, a simple instrument, of very little volume, and easily portable. It is already used in many great financial establishments, where considerable economy is realized by its employment. It will soon be considered as indispensable, and be as generally used as a clock, which was formerly only to be seen in palaces, and is now in every cottage.—[London Athenæum.

NEVER SATISFIED.—Nobody is satisfied in this world. If a legacy is left a man, he regrets it is not larger. If he finds a sum of money, he searches the spot for more. If he is elected to some high office he wishes for a better one. If he is a single man, he is looking out for a wife, and if married, for children. Man is never satisfied.

John Bull's Baggage.

DID you ever see an Englishman, just from home, traveling without that inseparable accompaniment of his, a *hat box?* Through all kinds of difficult transportation, when it is trouble enough to get yourself and the necessary "luggage," as he calls it, through, John Bull sticks to his "'at box." First, you see him coming up the gang plank, carefully guarding it, as though it contained wax flowers! holding it out at arm's length in front of him, his huge steel-rimmed eye glass firmly pressed in between his eyebrow and cheek, *going one eye on it.* He reaches the deck, and if he has not found his state room (which you may be sure he has secured if there is one on board), he sits it carefully down in a corner on top of his sole-leather trunk (which is not more than twice the size of the hat box), and turns round with an unutterable expression of repugnance depicted upon his features as he surveys the crowd around him, and the steamer, which he considers an abortive attempt at an imitation of "those we 'ave at 'ome." While his back is turned, a careless porter has piled a big trunk right on top of his box. This indignity is too much; he immediately gets very red in the face, and drawing himself up to his full length and putting on his dignity, he prepares to annihilate the man, with his just displeasure—

"Take that hoff my 'at, you blockhead! don't you know 'ow to 'andle luggage better?"

"Go to the devil! take it off yourself!" is the reply.

John Bull is astounded, to be thus addressed by a servant! He rescues his property, relates his grievance to the next bystander, and inquires "what kind of a blasted country 'ave you 'ere?" From this to his journey's end his hat box is continually a trouble to him; you never see him have a hat on, he continually wears a little grey cap, much too small for him, you think it must have been his little son's, it is so out of proportion to the size of his face!

What can he have in the box? You think he must certainly have the latest style, which he is going to introduce when he arrives at his destination. You engage him in conversation and find he is going to the same place you are, and he patronizingly tells you that he is well acquainted at the best hotel in the city, and will see that you *'ave hattention.* The morning after your arrival your English friend makes his appearance with *the hat* on his head. Merciful heavens!! is *that* the thing he has guarded so faithfully? Why, you could have bought it second hand from among the stock of an "*old* established" hat store any where for a dollar; you have a distinct recollection of seeing one precisely like it when you was a boy, in the garret, when you was at your grandfather's in the country, carefully laid away under the eves, full of seed beans. But your friend John Bull thinks his is *blasted nobby!* and so he is pleased why should we not all be so? WASH.

A GOOD MAN'S WISH.—I would rather, when I am laid in the grave, that some one in his manhood should stand over me and say, "There lies one who was a real friend to me, and privately informed me of the dangers of the young. No one knew it, but he aided me in time of need. I owe what I am to him." Or would rather have some widow, with choking utterance, telling her children, "There is your friend and mine. He visited me in my affliction, and found you, my son, an employer, and you, my daughter a happy home in a virtuous family." I would rather that such persons should stand at my grave than to have erected over it the most beautiful sculptured monument of Parian or Italian marble. The heart's broken utterance of reflections of past kindness, and the tears of grateful memory shed upon the grave, are more valuable, in my estimation, that the most costly cenotaph ever read.

NO PERFECTION.—Naaman was a mighty man, *but* he was a leper. Every man has some *but* or other in his character—something that blemishes and diminishes him—some alloy in his grandeur—some damp to his joy; he may be very happy—very good; yet, in something or other not so good as he should be, nor so happy as he should be. Naaman was as great as the world could make him; and yet, as Bishop Hall remarks, the basest slave in Syria would not have changed skins with him.—[Mat. Henry.

THE WORLD MOVES.—The finger of Galileo is shown under a glass case in the Florence Museum. It stands on a mysterious-looking bit of parchment, pointing toward heaven. The hand to which it belonged is supposed to have been put to torture by the Inquisition for ascribing motion to the earth, and the finger is now worshipped for having proved the motion.

It is confidently asserted that the married ladies of Sonora have formed a society for the purpose of inquiring into the character of marriageable young men. This is a great, grand project; but involves, we fear, extreme peril to the philanthropists engaged.

A Yankee has invented a plague which kills off all who do not pay the printer. It has played sad havoc in New England.

Who is there that somebody does not contrive to like.

He is the best accountant who can cast up correctly the sum of his own errors.

It is not easy to straighten in the oak the crook that grew in the sapling.

You will never have a friend if you must have one without a failing.

Better be the head of yeomanry than tail of the gentry.

Be contented and thankful; a cheerful spirit makes labor light, sleep sweet, and all around cheerful.

A stranger is received according to his dress, and taken leave of according to his merit.

We have often heard of a man "being in advance of his age," but who ever heard of a woman being in the same predicament?

The world can never be wiser than when it knows that it knows nothing.

The man who couldn't "trust his feelings" is supposed to do business on a cash principle.

Sympathy.

DOWN in the deep recesses of the heart, lives a little plant called sympathy; it is of humble origin and low pretensions, but, nevertheless, beautiful. It is a tender plant and of delicate organization, therefore it needs nourishing, but well repays cultivation, and, unlike others, its progress is hastened by the other plants—Love and Charity. This delicate plant needs to be nurtured and watered by the dews of Affection, or it will become exterminated by the rough weeds of Malice and Hatred, but if properly cared for, it will grow and flourish, sending forth its sweetness, enlivening and cheering the hearts of all. Who has not had his heart cheered by the sweet influence? How it warms and quickens the heart, dispels the dark clouds of distrust, and inspires confidence and courage. Who, as he has returned the gaze of a fond friend, has not felt a thrill of delight pervade his whole soul?

"Oh, there are looks and tones that dart
An instant sunshine through the heart!"

And who has not felt their power? Who, as he has stood by the bedside of a dying friend, has not felt the soothing influence of sympathy? How like the gently distilling dew, or the healing oil has it fallen upon his wounded heart.

The young orator ascends the platform; a breathless silence pervades the audience, and one can even hear the falling of a pin; he commences in a low, faltering voice; soon he becomes animated with his subject, he catches from the audience a spirit of sympathy, and he seems gifted with new power of utterance. His eloquence astonishes his hearers, and he is confounded with their applause. How much of his success is due to this mysterious influence exerted over him by others. How he felt himself sustained, and his heart warmed and encouraged by the rays of sympathy beaming upon him from the countenances of those around him!

How like a withering blight does the contemptuous sneer, the smile of scorn and the keen, cutting sarcasm fall upon the sensitive spirit, warping its noble energies and discouraging its efforts. The shrinking heart recoils from it, while the sweet smile of sympathy lights up the countenance, enchains and encourages the heart, brings into action the higher and nobler feelings of our natures and powers of the soul, and stimulates us to elevate and improve ourselves. How often we read in others feelings congenial with our own, and do we realize how much this feeling of sympathy in others adds to our happiness?

We need sympathy in all the various duties and relations of life; who does not need sympathizing friends, in whom he can repose confidence, who will sorrow with him in his trials, and rejoice with him in his joys, and who will be to him like guardian angels? The delicate tendrils of the heart must have some other object around which they can twine themselves, and which will support them in the rough storms of adversity and the changing winds of fortune. It lightens the cares of life, to feel that they are shared by others—how hard it is to struggle against life's rough waves alone; how easy, when we are sustained and encouraged by those we love! We pity the friendless; how bitter is their lot; we do not wonder that they are sometimes led into vice, for they have little to stimulate them to virtue. Who does not long for the sympathy of the pure, the noble and the refined? Then let us strive to imitate them, and to elevate ourselves, that we may be better fitted for their society. Let us strive to encourage the growth of the little plant Sympathy, in our hearts; it will reward our efforts, for while we impart its healing virtues to others, they are reflected back upon us in a tenfold degree. Let us strive to improve the noble faculties of the soul, to expand the mind, and as its newly developing powers are cultivated and brought into action, they open new avenues of happiness and afford new sources of enjoyment. It is only by trying our abilities we become acquainted with ourselves; how many are the germs of great and noble intellects that lie concealed beneath the mists of ignorance and superstition; who can tell how wonderful are the hidden powers of the soul? were they drawn out how would they astonish us? Here we commence an existence which is to be immortal, and the mind is to continue expanding and developing new powers through a long eternity!

We may, by acquainting ourselves with human nature, learn to share our sympathies with others in that delicate and judicious manner which will neither offend or wound the feelings of the most sensitive, and how many there are who need sympathy; the sick, tossing on beds of suffering, the poor, struggling with the adverse winds of fortune, and the afflicted of all classes! How many are the hearts pining in silence, whose griefs may be lightened, and whose wounded hearts may be cheered by the sweet voice of sympathy! This love of sympathy is inherent in our natures, and is implanted within us for wise and noble purposes. It is an incentive to virtue, stimulates us to strive to make ourselves worthy of the esteem and confidence of others, and leads us to aspire after higher and nobler attainments.—Evelyn M., in Boston Cultivator.

NEW CONUNDRUMS.—Why is a grainfield like a group of children? Because when the heads bend and nod, they should be cradled.

Why are the sheaves of grain like rude boys? Because they must be thrashed before they are fit for use.

New Agricultural Books.

THE following list of new and valuable works has just been received by us from the East, and the Books can be had at our offices in San Francisco and Sacramento:

Young Ladies' Seminary, Benicia.
MISS MARY ATKINS, : : : : : : : PRINCIPAL.
THE School Year of this Institution is divided into two terms of five months each; but the term commencing January 5, 1857, will close May 1st, 1857, in order that the semi-annual vacations may take place hereafter in May and October.
At the close of each term there will be a thorough examination of the pupils in all of their studies.
The Course of Instruction is such as is usually pursued in High Schools, and also includes the accomplishments of Drawing, Painting, Vocal and Instrumental Music.
The government of the school is gentle, but decided. A daily account of the recitations and deportment of each pupil is sent, monthly, to the parents, who are thus regularly informed of the progress of their daughters.
All of the pupils board either with their parents or at the seminary, and are under the special care of their parents, or of the teachers of the Institution.
The School is open to inspection at any time, and friends are cordially invited to visit it; but no pupils can receive calls from any persons, excepting those introduced by the parents and guardians to the principal.

TERMS:

	PER MONTH.
Tuition in the Higher English Studies	$ 8 00
" " Common " "	6 00
" " Music and use of Instrument	10 00
" " Ancient and Modern Languages	5 00
" " Drawing and Painting	4 00
For Board (per week)	6 00
For Washing (per session)	25 00

No extra charge will be made for Vocal Music or Embroidery: neither are the pupils required to furnish their rooms, bedding, &c.; but each pupil must have every article of clothing distinctly marked with her name.
Payments are to be made invariably at the beginning and middle of each term, in advance.

Eagle No. 2 Boston Plows;
Churns of all kinds, &c., &c., &c.
For sale at the lowest rates by
TREADWELL & CO.,
Corner California and Battery streets,
San Francisco.
N. B.—Any of the above named articles can be had at our branch store at Marysville. v7-9 tf

New Cultivator.
THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measures operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who wish finely cultivated soil it has no equal.
Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.
All persons are invited to call at the workshop and examine it.
v7 5 3m R. BEECHING, Manufacturer,
35 Pine street, San Francisco.

The California Farmer.

SAN FRANCISCO, FRIDAY, MARCH 20, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited free.

TO OUR READERS AND CORRESPONDENTS.—We can invite our friends to many and varied dishes we present in this week's issue. Agricola comes to us with Practical Agriculture, and a chapter well worthy the careful perusal of every cultivator of the soil, and will bear twice reading; what is said of a "farm school," is worthy all consideration.

Agriculturist—The Agriculture of Oregon will demand the interest and attention of not only the farmers of Oregon, but the merchants of San Francisco. We should hope that Capt. Dall, of the Pacific mail steamship company, may be able to clear himself of the serious charge made by our correspondent, for it is a serious one to obstruct the trade in breadstuffs, and thus add to the present difficulty already existing; the charge comes from a well authenticated source, and this shows how the flour market is operated upon in the Bay city. Merchants will do well to look to this. We would fain hope an explanation may be given, but when the farmers' interest are at stake or in jeopardy, we must speak; what we give is from a well known source.

Quartz Mining and Quartz Mills should receive the particular attention of the miner and the mechanic.

Letters on Agriculture from several of our friends; these are all worthy their particular attention, for every farmer is able to communicate some truths, and it is by the exchange of these truths, mind acting on mind, that great good is accomplished; and if all our farmers would write more freely their experience, the condition of their farms and the results of their labors, all would prosper more.

Our "Ladies' Department" has again received contributions from "Helen" and "Adda," which we hope they will continue; and an old friend and true one comes in stars also; and we are happy to announce several new and valuable contributors to this department, whose writings will be perused with deep interest. "Serena" sends us copy, and we feel proud in saying to our readers that we hope to have our columns often enriched by thoughts from one so gifted. "Hortense" is on file and will appear. Her sweet and affectionate words of friendship are worthy of preservation. We hope to hear from her often. We have other valuable aid promised us, and we hope our "Ladies' Department" will be worthy the approbation of every family in our State, and be received as a welcome visitor.

MSS. copy from abroad in quantities, for publication, which we shall present in future numbers. In our issue this week will be found a humorous article on "Hats," by Wash: it is rather satirical, but a pleasantry. The writer being in a position to observe, and having often noted the witticisms of writers who visit America from abroad, he has taken the idea of an "Englishman's Hat," and made a pretty pleasantry and witty article of it. Wash is another Squibob.

The report from Stanislaus is of interest to all practical farmers.

The letter of one of our distinguished men on Sheep Raising, will be read with interest. Letter from H. S. on the same subject, will appear in our next. Many thanks for it.

Quartz Mining.

OUR correspondent, J. E. Clayton, Esq., whose second very interesting letter appears in our columns to-day, would have us take a higher ground in behalf of the Mechanic Institute of this State, and wishes to have our journal stand at the head of all journals in behalf of Agricultural and Mechanical Science. This is well, but we believe we *now* stand *in that very position*, and we believe we can say so without a particle of vanity or egotism, for we have always, boldly and earnestly, advocated every measure, the tendency of which was to elevate the character and condition of the "working men of California;" to do this has been our pride, and if the Mechanics have neglected the duty they owe the community and themselves in not receiving the FARMER, and in not making known one to another those practical truths in their pursuit and calling, then the fault is not ours. We have felt and do feel that not only the Mechanics, but the Manufacturers and Farmers, too, in many parts of our State, have neglected their own interests very materially, in not becoming acquainted one with the other, and in not becoming readers of the CALIFORNIA FARMER; for we feel sure that there is valuable matter and practical facts in every number, and no person can be engaged in any one of these branches named and not be the loser by neglecting to take our journal, because he *loses the practical results of other men's labor and other men's minds*, and thereby loses knowledge that would be of great value to him.

We sincerely hope that the mechanics and working men, and especially the miners, will look with favor upon our efforts for their interests, and that they will give us the results of their own practical experience, and also give us their encouraging sympathy and support.

Miners and mechanics in many places could easily get us a list of five, ten, twenty, or more, and thus they would give us the means to do more for the good of all. We hope the letter of our correspondent will be read with much pleasure by our patrons and friends, and that they will give us their aid and support in the great work we have undertaken.

The Bonded Warehouses of San Francisco.

How few of our citizens ever think of visiting such places as the Bonded Warehouses, if they are not directly interested in prices current, or in the rise and fall of flour? They conceive they have no interest in foreign goods, but if merchants of all classes, and real estate owners, and mechanics, and farmers ever give a moment to reflection upon the subject of our present embarrassments in trade, we ask them to go to the Bonded Warehouses of Mr. Griffin, formerly Flint's Warehouses, and go through their vast and extensive vaults, and they will no more wonder that our State is embarrassed—that our home merchandise brings half cost—that our mechanics and manufacturers are out of employ, and that our laborers are in need of food and clothing.

We were very kindly and politely shown through the entire building, by our friend Charles Wolcott Brooks, Esq., whose post of duty is one of responsibility and great care, and who performs it admirably, and to whom we return many thanks.

We know it is impossible to give an adequate idea of the wealth here deposited; yet it is one of the great engines that is undermining our own State, and demands the serious consideration of all political economists.

We shall give a list of the articles we found on storage here, in bond, reminding our readers that here they lay, ready to be poured upon the market just when they will pay best for their owners, and, being of foreign manufacture, the duties are not paid until the owners can conveniently make a profitable sale.

The following are some of the articles; these are foreign articles indeed, being manufactured out of the United States:—Hhds. and casks of brandy and Wine, casks and baskets of olive oil, fruit of all kinds, cordials, porter, ale, sardines, soap, cheese, candles, pie fruits, fish, tamarinds, sauces, currie powder, pickles, mustard, vinegar, vegetable oils, mushrooms, axle-trees, marmalade, demijohns, 3290 bags beans, 250 bales hemp, 5300 boxes soap, letter paper, 71 cases nutmegs, mace, orange flower water, chocolate, 1000 bundles railroad iron, carpenter's tools, crockeryware, linseed oil, machinery, cutlery, zinc, hardware of all kinds, tea, sugar, coffee, rice, figs, raisins, macaroni, vermicelli, cigars, quills, champagne, absynth, dry goods, blankets, silks, &c; and we could enumerate much more; but we ask all who feel for our prosperity to ask themselves, can we as a people expect to prosper; can California ever, with all her gold, be a prosperous State while she imports from foreign countries, or even other States, millions of dollars worth of goods that she can successfully produce within her own borders.

We felt as we looked upon these vast receptacles of wealth, where many millions lay, that here was the gangrene that was eating out our very vitals; and when we reflect that for all theis merchandise now lying idle—duties still owing to our government—that there has been also hundreds of thousands sent away for the freight of the same—that capital also idle—when will our citizens awake to their own condition, and labor for our homes.

We shall resume the subject; in the mean time we ask all who are willing to give us their views upon the effect which such an amount of foreign merchandise has upon the mercantile trade, to do so; our columns are open.

The Dairy.

WE call the attention of Dairymen to the subject of Dairies, and the Dairy business, in all its branches. We feel an interest in the success of this branch of our domestic wealth, and if we could have the co-operation of all who are interested in butter making, cheese making, milk ranches, raising of new stock and the importing of new breeds of valuable stock, we could do much for them.

We need the co-operation of every branch—in union there is strength—and if we could but get the voice of each and all, if every man interested would give us all the information in his power relative to his own wants, if each would make inquiries, give facts, state results, and call on his neighbors to do the same, a very important change for the better would be the result, and a greater prosperity come over all classes.

If we could have such a co-operation, the dairymen of California would control the State, and shut out for ever all foreign competition, and then their permanant prosperity would begin. If they require a proof of this, let them look to the grain growers of California; they control their branch of business, and have made themselves rich, and they have given the death blow to speculators in flour and breadstuffs, as they ought to do. They raise the grain to make the flour, and they should have the benefit of their labor. When they do as they have this year the whole country gains.

DONAHUE'S IRON FOUNDERY.—In the notice we gave of this celebrated foundery, we omitted one very important fact, and one which is important to all large manufactories. C. W. Lightnas, Esq., the able superintendent of the foundry, has now been connected with the establishment three years, acting as draughtsman, designer and superintendent, thus combining those great and streng features of success which must always accrue where one mind can become familiar and have controlling influence for a series of years. The knowledge they attain is of inestimable value to a proprietor; and we have seen and known more loss and ruin in California arising from the foolish and unwise policy of changing heads, for paltry dollars, than have ever arisen from any other cause. Success ever depends upon the steady, persevering and permanent pursuit of a good work, and the foundery to which we allude is an evidence of it.

THE trotting match that was to have come off on the 15th inst., between the horses Gen. Taylor and Henry Clay, did not take place.

Sheep Raising.

WE are very happy to receive the following communication from our friend, and we most cheerfully give place to this valuable letter of information relative to the introduction of sheep into California. We know the Messrs. Whitney & Co. will most cheerfully concede all that is due to our correspondent, to whom great praise is certainly due.

Truly and well has the "curse of gold" been described; it has indeed been a withering blight upon the energy of many a soul, but we rejoice a better day is coming, and that the noble science of farming is now about to receive its just appreciation. We pray every one may not only read the letter of our correspondent, but mark the passages where he speaks of the affection he felt for his lambs, and for their safety; but they were permitted to fall a prey to the devouring wolf. How true a picture is this of men in California; they leave rural pursuits, and seek for glory, fame and wealth in the political field, and lo! there comes a devouring wolf—and their purest, noblest and best energies are devoured by this "wolf in sheep's clothing." Politics may *appear* innocent to the newly initiated, but soon the blight comes, and all is lost.

We repeat again, we hope this letter of our friend, who was written thus truthfully, will be read, and we shall be glad to hear from him often. We can say for Messrs. Whitney, all the strife that will exist between them and our correspondent, will be to see who shall most nobly strive to do good in California:

—

SACRAMENTO, March 18th, 1857.

EDITORS FARMER: A writer in your paper of last week, signing himself C. C. C., on the subject of sheep importation and wool growing, has very innocently, no doubt, done me injustice in crediting to Messrs. Whitney & Co. the honor of being the "pioneer importers in this line," about a year since. I, sir, am the first person who imported fine wool sheep into California. Born and reared in the country (for which "accidency" of birth I shall ever be thankful to my Creator and procreators), agriculture, horticulture and stock raising are to my mind and feelings the most pleasing, delightful and honorable occupations a man can be engaged in. At these branches I had determined to occupy myself prior to the gold discovery. In view of the business, both on my own account, and to furnish the country of my adoption with an article which I knew was admirably adapted to it, and would at an early day afford a very lucrative article of export, I brought with me from the Sandwich Islands in the summer of 1847, where I spent a few months on a visit, five young sheep (two rams and three ewes), of an excellent quality for wool—nearly pure Merino.

They were obtained in the valley of Wimea, an elevated region lying at the northern base of Mona Kea, on the large island of Hawaii. From here I got them packed on the backs of Kanakas some twelve or fifteen miles to the port of Toahaie—thence I took them in a small coaster to Lahaina, where they were kept several weeks in a merchant's yard and garden, where I stopped—thence on another schooner to Honolulu, where I guarded them with much care and solicitude (for occasionally they played truant into the streets), in the yard of my hotel for a month. In the month of August set sail with them on board the little brig Providence—(which vessel, I may say *en passant*, owned at the time by Gen. McDougal, Judge Blackburn and Dr. W. C. Parker, was the first sea-going one that ever ascended the Sacramento river—lay at the embarcadero of this place during the fall of 1848 and winter of '49, and thence voyaged to Sutterville, where she sunk about the same time a $250,000 prospective fortune of mine in that unfortunate city went under), and arrived after a long passage of thirty-five days at San Francisco. At that little village (Sutterville), my sheep remained a week or so, to recruit, when I sent them in a launch to Sonoma, to the care of Mr. Wm. Boggs, son of Ex-Gov. Boggs; in which lovely vale I contemplated making my home for life, and had there established myself, when the accursed discovery of gold was made—a discovery that has brought more evil crime and deeply damning pollution upon this fair western land, than had a hundred Pandora's boxes been opened in it.

Not long after reaching Sonoma the dogs killed two of my pets, and frightened the others away into the hills, where I presume the wolves made a meal of them. Having fed the gentle creatures with my own hands through so long and varied a journey, you may imagine the warm attachment we formed for each other. Even now, as I think of these dear innocent companions of my voyage, tears dim my eyes. To call up such recollections and associations of the happy past, adds to my grief in another way—indeed I hardly ever pillow my head at night without mourning over the contrast of what is, and what would have been in California, but for the curse the Almighty has sent upon the land. But for the infernal gold, bringing with it an influx of the offscourings of all nations, the vile and vicious of every land and clime, and with its tainting touch and influence making men grossly selfish and knavish, who may have brought some virtue in them hither, we should have been able to boast of a country and an innocent, contented, joyous population, as would entitled it to be termed a hesperian Arcadia.

And as it is, sir, the only hope of any bright future to us here, and the generations which are to follow, lies in its tillers of the soil and breeders of stock.

On this most pleasing theme I may—should this communication be acceptable to your columns—dilate more at length in a future number, giving your readers the benefit of my travels and observations regarding the best locations for sheep raising, etc., etc.

CHAS. E. PICKETT.

Letter from Shasta.

THE annexed letter was not written for publication—merely as a business letter; but it is so practical in all its bearings, that we take the liberty to publish it, and to express our thanks to the writer for the interest he manifests, not only for the success of our journal, but for the cause generally. If all to whom we have sent books and seeds would but reflect upon the good they might do, by giving utterance to their thoughts, however plain or matter of fact they might be, they would not hold back.

We have many parcels of seeds and books which we are always happy to distribute, among farmers: the Alfalfa, Chinese Sugar Cane, &c.; but if farmers will not take the only agricultural paper in the State, how can we communicate with them. Our correspondent says: "they would give any price for that Alfalfa." Well they might; and if they had taken the FARMER and learned the true value of this invaluable clover, they could have made thousands of dollars by it; but it is not too late yet. The Alfalfa is one of the best species of green food for milch cows or for hay that the world produces. There are a thousand subjects as valuable for every farmer to know; but some of them will take half a dozen political papers, when not one of them treats upon their own daily pursuits; but they take no agricultural paper, lest they should be esteemed "book farmers." We hope better things of our friends in Horsetown, and trust they will all realize the value of that information, which may be had so cheap, and join in communicating to one another their practical labors.

We thank our friend for his kind letter, and hope he will excuse us for the liberty we have taken. It was to do good that we published it. No farmer should neglect to collect all the knowledge he can of the Agriculture of California, and we believe he cannot secure it in a more certain way than by sending us $5 and ordering the FARMER:

—

HORSETOWN, Shasta County, March 6, 1857.

MESSRS. EDITORS: I have taken an opportunity of sending you a few lines, thinking that you might like to hear from me. The things that you sent to me I received some time ago. The books, wheat and garden seeds arrived in good condition, and I have planted them, most of which are coming up and look finely. Those patent office books which you sent me I find are very valuable, as I have taken a great many items from them, which are of advantage to me. The wheat I am very much pleased with; also the Alfalfa seed, which I could have sold here at a big price. The farmers not knowing what it was, I told them, and gave them a kind of a description of it; and told them if they would send five dollars to the editor of the CALIFORNIA FARMER and take that paper, they would find out all about it; and that it would be of great use to them.

I have been so very busy of late, getting in my crop, that I have neglected writing you before. I have spoken to several men here about your paper, and they like it very much, and think they will send for it very soon. Those copies which you sent me I have distributed throughout this neighborhood, and the people like it very much. I am very certain that in the course of a few days I will be able to send you a list of subscribers for your paper.

You spoke about having some seeds sent you from Washington. I wish, as soon as they arrive, you would send me some—a few of each kind. I wish you would be sure and send me some of the Chinese Sugar Cane seed, which I have seen noticed in your paper; also some of the King Phillip or brown corn, &c.

We have had some very heavy rain storms here of late, which have done a great deal of damage to the miners and others upon the large streams. Owing to the heavy rains the farmers have been very backward about getting in their crops this season, some of them not putting more than half as much as they expected to put in last fall.

DANIEL HYDE.

OUR BOOK TABLE.—We have received from our friends the following Books, for which we return our sincere thanks:

From Hon. J. B. Weller, from Washington, Statistical Report of the Sickness and Mortality of the Army of the United States. A most valuable work, from which we shall make extracts.

From J. F. Morse, M. D., of Sacramento, the 3d number of the California Medical Journal, a work most ably edited by Dr. Morse, and one that should be in the hands of every Surgeon and medical practitioner in the State, and worthy an extensive circulation abroad.

Dinsmore's Thirty Miles round New York, a Railroad and Steamboat Guide, an invaluable book for all travelers.

The Annual Report of the President of the Mercantile Library; an interesting pamphlet of one of the best institutions of our State, and of which we shall speak at length hereafter.

The South Carolina Agriculturist, for November, a very valuable number, and speaks well for the South.

We have some forty valuable Books, received from New York and Boston, which will be reviewed at length hereafter, and for which due credit will be given, and for which we return many thanks to the liberal donors.

Report from Stanislaus County.

LA GRANGE P. O., Stanislaus county, March 10, 1857.

EDITORS FARMER: After a winter of toil and hard labor, I now take this opportunity to let you and your readers know how things are moving on in this part of the State.

The first part of the winter was quite dry in these parts, and the prospects of the farmer looked dreary. Yet the rain falls on the just and unjust alike. During the early part of the winter we had some seasonable rains, to aid us in plowing and seeding. On the 13th, 14th and 15th days of February, we had heavy rains; the Tuolumne river, at the town of La Grange, rose ten feet in a few hours. Much damage was done to Ditches and Reservoirs up in the Mining region. The Dam that raises water in the Ditch at La Grange, was injured by the rapid rise in the river on Sunday, 15th February. On February 24th, the rain began to fall copiously, and continued to do so for three days and nights without intermission. At this time I was in the town of Sonora. Wood's Creek, and other creeks, were swollen more than at any time for several years previous. Some bridges were badly injured; also buildings were in danger of being swept away by the rush of water. The engine-house and machinery of Messrs. Heslep and Bell, one mile and a half west of Sonora, were badly injured by the water in Wood's Creek. The Milldam of Caothers & Co, near Keeler's Ferry, was swept away; this is on the Stanislaus river. Another Mining Dam above Knight's Ferry was somewhat damaged. The Milldam of Talbot Mill Company, on the Tuolumne river, was broken. Mr. Gallop's Ranch, on Dry Creek, north of the town of La Grange, was some injured by the freshet, ditches and fences being swept by the swollen stream. Also, the Ranches below, belonging to Armstrong, Brasfield, Letcher, Cooper and McCarty, were injured. One man was drowned near Cooper & McCarty's Ranch. An eight-mule team was saved by the coolness of John Coe at this place; the team was owned by a Frenchman,—his life was in eminent danger for a short time. The roads are bad; many of the stages have ceased to run for the present. Flour is high; 50-lb sacks $5 to $6; hay $60; not much good beef in market. At this time I think it safe to say that crops have not looked as well for the past three years in the month of March. If nothing befalls us, we will have good crops this season. Stock range good. We have a good school just begun in this district. Three miles below LaGrange is located Branch's ferry; there is also one at LaGrange.

This last winter's sowing of wheat was done as follows: Soaked my wheat in bluestone, in the following manner: put in casks, at night, what I intended to sow the following day; dissolved ¼ lb. bluestone for each bushel of wheat, and put in a sufficient quantity of water to swim the wheat, or entirely cover it, and let it remain until morning then removed it to the barn floor, and dried with lime, and as soon as possible sowed. In due time I will let you know the result.

I hope to hear from some of the farmers in this State, and learn their notions about smut, and how to prevent it. Some of the farmers have begun to make some fences about their ranches. Some make mock fences, and some are keeping dog-fences. This last, and the mock fences rank nearly together; they are first cousins (*cozens* to cheat the farmer out of his grain). Here permit me to say that some have begun their fallows for the next crop, whilst others are making dog-fences.

ROAD.

Hemp Lint and Flax Seed.

SANTA ROSA, Cal., March 15, 1857.

MESSRS. EDITORS: I take the liberty to send you a sample of Hempt Lint, raised on my ranch, one mile from the county seat of Sonoma (Santa Rosa). This hemp was raised on land never before under cultivation, without any manure, and I think, from this sample, that we can raise as good lint here as can be raised anywhere. If you think it worth notice, you may show it to some hemp raiser, and ask him if it is not good.

We want to show you that we have some good country down our way.

Yours with respect, &c.,

H. H. LINVILLE.

—

We are much pleased to receive the above letter from our kind friend and correspondent. It is just in time, as the subject is one of great importance.

By referring to our article on the Bonded Warehouse, it will be seen that we have to send away a large amount of gold, annually, for flax and hemp for manufacturing purposes. Messrs. Tubbs & Co., are largely engaged in manufacturing cordage which, has proved equal to any imported. Besides, we are obliged to import oakum to a large extent.

At the present time we are about introducing the cultivation of hemp and flax, which can be successfully raised in our State. A large quantity of flax seed has just been received by us, through the kind liberality of Tubbs, & Co. which we shall be happy to distribute in parcels for experiment. We have also packages on sale for those who desire to plant in quantities.

We can speak of the sample of hemp sent us as being very superior—long, fine fibre, and evidently of superior quality. We invite those acquainted with it to call at the State Society's rooms and examine it.

LITTELL'S LIVING AGE.—No periodical has become a better standard of literature, in general, than Littell's Living Age, and none more truly the record of science; and so with Little & Co., Apothecaries' Hall. Their skill in medical science and their correctness in their peculiar sphere, as apothecaries of high standing, stand unrivaled in the Bay City. It is very important that true and reliable men should stand as the guardians of health, in compounding medical prescriptions, and none are more reliable than Little & Co.

Home Manufactures.

FURNISHING WAREHOUSES OF SAN FRANCISCO.

ONE of the most important considerations of those who came to California with their families, and were obliged either to ship the furniture "'round the horn," or dispose of it at a ruinous loss, has heretofore been, that they could not obtain here those valuable and necessary articles of furniture which is requisite either to make a family comfortable, or furnish a house genteelly. All fears are banished now of not obtaining all that is needed, either necessary, genteel or luxurious, and we venture the assertion that in no city of the Union can better, richer, or more elegant furniture be found than in the city of San Francisco.

We have heretofore spoken of the various rich pieces of furniture that we have seen scattered in various warehouses, and recently we paid a visit to the large and spacious furniture warehouse of *Geo. O. Whitney & Co., California street*, and we confess our surprise at the immense stock of furniture in this house (four stories and basement), and hardly a place to walk. Messrs. Whitney & Co. are of the "old pioneer" stamp, and having been one of the oldest houses, are well known and consequently have a very extensive trade; teams loaded with furniture are constantly fitted off to order. One thing is very creditable to this house, purchasers always seem to be pleased. There is one thing in connection with this business which we must always object to, *i. e.* they are goods manufactured abroad, and these goods draw our real capital, and impoverish us; we must make all our own furniture in California. We most cheerfully commend the best houses in all instances, even of foreign manufactures, but home manufactures must have the preference; and we hope every furniture warehouse, every furnishing warehouse, of every name and kind, will see the real necessity of supporting our own workmen, and using our own capital in preference to all others. We must also speak at the present time, of another warehouse of the same nature, in our city.

J. G. Clark & Co., 132 *Washington street.*—This immense and splendid warehouse extends from Washington street to Jackson, is nearly 300 feet long, and is three stories high, with a basement, and filled to overflowing with furniture and furnishing goods of every kind, quality and price; from the most simple and neat to the most superb and costly. It requires hours to examine the stock of a house like this. We have done so, for it was an object with us to form a judgment upon the stability and prosperity of California: believing that if our men of wealth and capital were thus laying foundations of immense business houses, they surely had a hope for the future; and if the present business of the State required warehouses so immensely stocked, what would the future require. We saw one sure sign for the future at this house that gave us infinite pleasure—it was the superb pieces of California-made furniture now standing side by side with that of the imported, and bearing away the palm; and we learned with surprise and pleasure that this house is now employing some twenty men exclusively in converting our native woods into the most superb furniture on this coast. We examined many specimens of sofas, couches, bedsteads, bureaus, and whole sets of furniture, all of which appeared to be richer, handsomer, stronger and more perfect than any of the imported; and the proprietor told us that he has now so managed his plans that he can manufacture all the principal kinds better and cheaper than he can import them. All who feel the importance of sustaining home industry and encouraging our own workmen, should look to this subject, and we hope that the proprietors of this warehouse may become convinced that all we use shall be "home made," and what is more, give us a chance to show our readers what they can do, at the next exhibition of skill, which is to be the great Mechanics' Fair, in this city, in August next.

HOLLOWAY'S OINTMENT AND PILLS are highly recommended for the cure of Erysipelas. They act in unison upon the system, cleansing and purifying the blood, and never fail to cure any skin disease, however desperate the case may be. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot or box.

"Always in Advance."

THOSE who are desirous of having our journal will please remember the TERMS are—always in advance. We often have letters directing us to send the FARMER and a bill; in looking over the letter we do not find that "Five-spot," and knowing the parties to be good and honorable men, we send the paper. It then *sometimes* occurs that forgetfulness, or convenience, or a removal, or perhaps a visit to the States, causes our claim to be overlooked, and the small sum of five dollars, is lost to us. Now we wish to be as kind and obliging as we possibly can; our labors and duties are many and arduous, and we do hope our friends will think of this five dollars—it is but a small sum itself, but the aggregate of many fives creates means that would materially advance the cause of all interested.

When a subscriber's term is out, we do not wish to stop the paper abruptly, and we therefore inclose a bill with the next number, and wait sufficient time for him to signify his wish. If we are not requested to stop the paper, and he continues to receive it, we consider it equal to renewal and look for a remittance, and we ask our friends to inform us promptly in this matter. Either return the paper as a notice of non-renewal, or kindly remit us, and thus aid us in a work we believe worthy support.

A CARD.

☞ THE Report of the Agricultural Society, for the year 1856, including the full Reports of the Visiting Committees to the Farms and Vineyards throughout the State, Reports on the Exhibition, the Annual Address of the President, Address of Col. J. B. Crockett, detailed list of the Exhibited Articles, the Prize Essay on the Potato, with other important matter, is now issued in a neat Pamphlet of about eighty pages, illustrated. Persons desirous of obtaining copies will please address the Office of the CALIFORNIA FARMER, when copies will be forwarded as per order. Price Fifty Cents.

☞ For sale at the Offices of the CALIFORNIA FARMER, State Agricultural Society's Rooms, Sacramento—and at 260 130 Washington street, San Francisco. Also, at Ullman & Co's, J. W. Sullivan's, J. J. LeCount's, San Francisco; Dr. J. C. Cobb, and J. B. Manny, San Jose.

Partial Burning of Calvary Church.

ON Thursday evening, between eight and nine o'clock, Calvary Church (Dr. Scott's), on Bush street, was discovered to be on fire; but it was at least fifteen minutes before the doors could be beaten in, so that access could be had. The church was filled with so dense a body of smoke that it was impossible for any one to enter, and as no fire could be seen, the pipes were directed at random. The fire was at length extinguished, but not without causing great injury. It originated in the library room in the basement, at the southeast corner of the building. Immense volumes of water were thrown into the house, and at one time the depth of water in the basement was nearly a foot. There had been no fire in the building for several days, and at half past four o'clock on Thursday afternoon, the Rev. Dr. Scott left his study, but previous to his leaving, as is his usual custom, he went through the church and found everything secure. An hour or two afterwards the sexton entered the building, but saw no signs of a light. A few minutes before the smoke was discovered issuing from the building, a man was seen to leave the church, but those who saw him could not recognize him. He must have entered at the southeastern basement door, and set fire to the partition between the library room and the main entrance. Two rooms escaped injury, the study and the room below, which contained much property of value. The carpetings in every other portion of the house were rendered unfit for use, and the ceiling requires to be removed. The damage is probably about $10,000, but there is an insurance of $20,000 on the church, which will much more than cover all the loss. Calvary Church was erected in 1854, the lot having been purchased for $20,000, and the building finished at an expense of $50,000. The building in size fronts sixty feet, by a depth of one hundred feet; height of side walls from the ground, forty-five feet. The order of the architecture of the edifice is Ionic-Italian-Corinthian.

DOANE SHERIFF OF SAN FRANCISCO COUNTY. We announce with pleasure the fact, that Mr. Charles Doane has been declared Sheriff of San Francisco County. With this announcement we hail a new and better feeling in all the departments of business of our city connected with this office, and we believe our citizens will come forward, pay their taxes, keep the schools open, and accomplish more for the city than any other event that has occurred for a long time. The reputation of Sheriff Doane will give it an influence of responsibility and trust that will insure great safety and peace to our city, and we hear pleasure expressed in every quarter.

NEW CLUB EATING ROOM.—We call attention to the card of Messrs. Wilson & Alexander, on Montgomery street. This House approaches that style and character which we described last week; it is in fact the largest, finest and most fashionable Eating House in the State, and worthy a very special call.

MUSIC LESSONS.—Parents having children they desire to have correctly instructed in the science of Music, and so taught as to imbibe a love of this beautiful science, are directed to the card of "Melodia," in our special advertising columns.

AN ALARMING FACT.—More property is destroyed by fire every year in the United States, than in all the rest of the world. The annual loss is put down at $72,000,000.

GALES SEATON, Esq., eldest son of Colonel Seaton, of the National Intelligencer, died on the 17th ult., at Washington City. For a number of years he was editor of the Raleigh (N. C.) Register.

SHIPMENT OF TREASURE.—The shipment of treasure by the steamer Golden Gate, to-day, amounts to $1,645,358 03.

TRAVELING.

California Steam Navigation Company.

ARRANGEMENT FOR MARCH 1st, 1857.

Departure from Jackson street wharf, at 4 o'clock, P. M.

CARRYING UNITED STATES MAIL.

Steamer NEW WORLD, Capt. Samuel Seymour;
" ANTELOPE, Capt. E. A. Poole;
" CONFIDENCE,
" WILSON G. HUNT,
" HELEN HENSLEY Capt. E. C. M. Chadwick;
" J. BRAGDON, Capt. Thos. Seeley;
" URILDA, Capt. E. Z. Clark;
" CORNELIA, Capt. E. Conckiln.

One of the above steamers will leave Jackson street Wharf every day at 4 o'clock P. M., (Sundays excepted,) for

Sacramento and Stockton,

Connecting with the light draft steamers for

Marysville, Colusa, and Red Bluffs,

For further particulars inquire at the Office of the Company corner of Jackson and Front streets.

v6-1 SAM. J. HENSLEY, President.

Contra Costa Ferry Notice.

Corner Broadway and Davis streets

ON and after MARCH 1st, 1857, the Contra Costa Ferry Boats will run from the new landing, corner of Broadway and Davis streets, and will leave as follows:

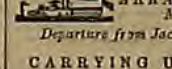
SAN FRANCISCO.	OAKLAND.	SAN ANTONIO.
At 9 A. M.	At 8 A. M.	At 7½ A. M.
12 A. M.	10½ A. M.	10 A. M.
6 P. M.	4½ P. M.	3 P. M.

San Francisco, March 1st, 1857.

v7-1 if CHARLES MINTURN, Agent.

CITY COACH.

FARE ONE DOLLAR.



THIS Coach will run to and from the Steamers to the RASSETTE HOUSE, and to all parts of the City, taking passengers for One Dollar each, including Baggage. Orders left at the Rassette House will be promptly attended to by P. MATHEWS & J. ENGLISH.

Please notice the Lettering of the Coaches, "Rassette House."

v7-3

BENJ. F. HARDY, M. D.

OFFICE---Rassette House,

21 door west of entrance on Bush street,

SAN FRANCISCO.

☞ Residence—Room No. 8, up-stairs, third floor from Parlor. v7-10

☞ NEWSPAPER ROUTE FOR SALE.—We can offer a good Route for the city of San Francisco, and one for Sacramento, to one who has the taste for making known our journal. A very profitable route can be thus secured to active and experienced men.

SPECIAL NOTICES.

☞ **FLAX SEED.**—We have just received several cases of very superior Flax Seed, from the East. It is of very superior quality; and there is no doubt but it can be grown here more successfully than in any other State in the Union. We really hope many will be induced to try this most valuable article. We are ready to furnish all who would like to try it as an experiment, with small parcels, *free*, if they will try it carefully. Those making it a business can be supplied in large quantities. WARREN & CO.,

v7-10 130 Washington street, San Francisco.

☞ **TO STOCK RAISERS.**—We earnestly invite stock raisers of all kinds to advise with us and give us information in regard to such stock as they may have for sale, and all the particulars of price, quality, &c. We are often inquired of relative to such matters, and can always find purchasers for almost all kinds of extra stock. Valuable stock will always sell; and we intend to keep a register of all such stock as may be in market, and assist in finding purchasers for it, and to do everything in our power to further the breeding of good stock.

v7-10 WARREN & CO.

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

BOOKS FOR GARDENERS.

JUST received, at the office of the FARMER, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

☞ **CHRISTMAS GIFT.**—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.

BY MRS. E. W. WIRT, OF VIRGINIA.

For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.

WARREN & CO.,

State Agricultural Society's Rooms, Sacramento;

v6-21 tf And 130 Washington street, San Francisco.

☞ **READ—Copies of the Farmer for Mailing.** That all may have an opportunity of sending the FARMER to their friends in the East, so as to make known the resources of California, we have

Reduced the price to Twelve and a-half Cents per Copy.

It will hereafter be found at the following places:

J. W. SULLIVAN, ULLMAN & CO., } Post Office Arcade.
NOISY CARRIER'S, Long Wharf
HUTCHINGS & ROSENFIELD, Montgomery street.
BOOK STORE, corner of Clay street and the Plaza.

At these places can also be found copies of the State Society's Reports. Price 50 cents.

The FARMER will also be had ready for mailing at all times at the office, at $1 50 per dozen; also single copies.

WARREN & CO., Editors and Proprietors.

SANDS' SARSAPARILLA,

FOR PURIFYING THE BLOOD,

AND FOR THE CURE OF

Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the STOMACH, the CIRCULATION, and the BOWELS, and thus three processes, which are ordinarily the result of THREE different kinds of medicine, are carried on at the same time through the instrumentality of THIS ONE remedial agent. Its great merit is, that it meets and NEUTRALIZES the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.

LYNX COUNTY, Oregon Ter., March 11, 1855.

Messrs. A. B. & D. SANDS, New York: Gentlemen,—In the spring of 1850, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted, and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 2d of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were reduced, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swellings in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor, as all our neighbors will certify.

Yours, respectfully,

CALEB DAVIS.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; E. H. McDONALD & Co., Sacramento; and by Druggists generally.

ROMAN EYE BALSAM,

FOR INFLAMED EYE-LIDS.

The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eye-lid evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.

READ THE FOLLOWING EVIDENCE.

NEW YORK, July 15, 1856.

Messrs A. B. & D. SANDS: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your ROMAN EYE BALSAM, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years.

Yours, &c.,

G. B. WILLIAMS, 262 BROADWAY.

PRICE, 25 CENTS PER JAR.

The Great Stump Puller.

WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.

It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.

It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.

The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.

Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!

It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. (v7-9) WARREN & CO.

To Farmers and Traders.

THE undersigned will pay the highest market prices, in **Cash**, on delivery, for California and Oregon *BUTTER, CHEESE, LARD, HAMS and BACON*. Large Dairies can make contracts for all they may make through the year, at the market price, when delivered, or otherwise, as may be agreed upon. Should any one feel disposed to consign to me, for sale on their account, any of the above articles, they can have very liberal *CASH* advances made on such consignments, and prompt returns. E. S. CROSS,

38 Commercial street, first store above Front, San Francisco.

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of Insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakespeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and bear, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for oursel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered unassurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promot s habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,346 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

A Gardener at Shares.

AN excellent opportunity can be given to a good practical as well as scientific gardener, for a series of years. To a person who could command a moderate capital a chance will be given that is permanent, and certain to pay very handsomely.

None need apply unless they can produce the very best testimonials as to ability and character, and one who is free from embarrassment, and can answer the advertiser fully.

A note addressed to "B. C." through the FARMER Office, with real signature, will receive prompt attention. v7-5 tf

A House and Garden Wanted.

A PRACTICAL working Gardener would like to take charge of some house and land, to keep it in order and improve it for one or two years, only requiring as payment the perquisites he could make by extra cultivation and sale of vegetables, &c., such as could be grown while keeping the place in order and safely.

Any person going East, or who wish a place kept in order for one or two years, without cost, can have satisfactory bonds that this will be done, if it is a good place, by addressing "T. Y. F." through the FARMER Office, with real name: then the advertiser will call on them.

☞ Please state where the place is. v7-5 tf

[PREMIUM MANUFACTORY.]

Hudson's Golden California Mustard.

THE proprietor of this manufactory would invite all who feel an interest in California productions to visit his establishment and examine his Golden Mustard. This article is made of California Seed of the very purest quality, and put up in tins of 10 lbs., 5 lbs., 3 lbs., 1 lb. and ½ lb., and in glass of 1 lb. and ½; and it can be had at prices lower than Eastern prices, and at the same time proved to be purer and better than the imported.

The proprietor also manufactures a very superior article of Salad Oil, to which he desires to call the attention of the public. Sample bottles of his make will be sent to hotels and large purchasers when desired.

For any further information regarding this Mustard, we refer to the principal business houses in this city.

Purchases at wholesale or retail are specially invited to call at the office,

22 Front street, corner of Pine,

H O HUDSON.

P. S.—The highest price always paid for pure A No. 1 Mustard Seed. v6-20 3m

Ladies' Department.

[For the California Farmer.]

LINES—DEDICATED TO H. M.

Adieu, dear friend, for thou art gone
To tread the haunts of men;
Shall those bright smiles that on us shone,
Shall we not have again?

That circle where you often sat
At morning, noon, and night,
And joined the gay and social chat,
Will miss their borrowed light.

For many acts of kindness shown
To those that shared a part,
We offer thee the greatest boon,
A true and thankful heart.

Go then, my friend, perform thy part
In all that's just and true:
Remembering, souls that 're free from art,
Good wishes breathe for you. HELEN.

[For the California Farmer.]

A Short Ride.

FEATHER RIVER, March 1st, 1857.

MESSRS. EDITORS: To show you and our friends in the city that we are enjoying ourselves in the country, I must tell you how much we found to amuse us in our short ride on one of our late sunny days that are giving new life to earth, and casting the roseate blush, and radiant smile, o'er the pale face of nature.

My friend Nelly, and I, were seated in a carriage, with a good horse and whip, which our friends had kindly provided for us, and with two gentlemen as traveling escort until we crossed the river and reached the plain, we set out to cull charms from nature's lavish store. Leaving our escort to their own enjoyment and to reach the river before us, we left the carriage road, and drove down a ravine, where the late flood that had laved its banks had been swallowed up, leaving the banks carpeted with a lovely green. Then we crossed the meadows and up the broad river's side, where we found that her late mad ragings, and foamings, had ceased, and she was rolling quietly on to the great deep; but her clouded face told that the Miner (mainspring of all our business life) was troubling her crystal tide. We found our guides waiting, so crossing the river and applying the silk, we rode out upon the open plain, with light hearts and buoyant spirits; for the little birds caroled and flitted over the green lawn, now and then a small flower was roguishly peeping out at the sun, and far in the distance loomed up the snow-capped mountains in such majestic grandeur and beauty, that I sighed to think I had not been born a Poet, to speak out my burning thoughts to those that had never looked upon so grand a scene. The plain seemed bordered with white cottages and cabins, gilded by the warm sun; some nestled so cosily under clusters of grand old oaks, that we felt tempted to call, and have a closer view of so quiet a spot; but fancying that strangers might criticise our horsemanship, we rode from one grove of trees to another, and in fancy built in each grove a cottage, a garden, an arbor; and brought from the mountain a crystal stream to water the whole. But this was fanciful. Then riding to a grove of very large Buckeye bushes, we halted to gaze at the reality; for here in this lone spot, upon a green mound, the sinking sun was shining upon the glistening marble slab which marked the last resting place of a noble Pioneer. He too had been charmed by the plains and the groves that we had been admiring, for these he had contended and fallen; and now naught but the cold tombstone told where the bold Pioneer lay.

Sleep, Father! sleep! for thy labors are o'er,
Thy sons have fled to a far distant shore;
The stranger shall revel in wealth and pride
On the soil where thou hast suffered and died.

But thy grave shall be shaded with flowers
Watered from Heaven with genial showers,
The birds shall chant thy requiem o'er
While like thy spirit to Heaven they soar.

The sinking sun admonished us that it was time to return, and driving to the nearest point on the river, we came to a cabin where men only presided as lord and lady. We stopped before the cabin, and as an apology for our intrusion, I inquired if there was a crossing at that point on the river? They answered, no; but said that they kept a public house, and politely invited us to alight, saying that they could offer us nothing stronger to drink than a glas of cold water, or a bottle of Perry Davis' painkiller.

Seeing our guides standing at the door, we entered the gate, but saw no boots or old clothes strewed about the yard, and observing a look of neatness about the door, a confidential feeling of safety crept over us as we entered. They handed us what they called "the old arm-chair," and we were seated round a small center-table. One of the gentlemen performing the part of hostess, invited us to take off our bonnets and stay a half hour; but we declined, of course, saying we had not time.

Being informed that they had lived here several years as farmers, I took a survey of the room, but saw no grease or pancake-batter spilled about the floor, nor "the dishcloth on the mantlepiece;" but clean-looking beds and well-arranged wearing apparel, told plainly that men *may* make themselves really quite comfortable, when necessity demands the effort; yet I regretted that some kind-hearted lady had not ere this made herself worthy of so quiet a home. Then I examined the table before me, but saw no cards, wine bottles, or chess-boards; but here was "Harper's Magazine," the CALIFORNIA FARMER, the "Carmina Sacra," and several Eastern papers, all of which told that here time was neither lost or killed, but profitably employed. We were informed that a new house was soon to take the place of the old cabin, and I imagined that some fair lady from the fireside of a New-England home, was destined to grace the new mansion.

We sang several tunes from the Carmina Sacra, and found among us cultivated voices, for all the parts; after which, heartily wishing success and happiness to the farmers, we hastened home, where we found ourselves much happier for our short ride, and thankful that pleasures so simple were dear to our hearts. ADDA.

Smiles and Tears.

OUR readers will recognize the beautiful thought of one of our correspondents, which comes to us at times, breaking away from the mist and clogging of this world, and giving utterance to bright thoughts that gladden us and lighten our pathway, like as the sun when it breaks through the storm clouds and beams upon us, and shows the bright blue beyond.

Welcome, welcome again, thou cheerer of many sad hearts. Thine own must be blessed, indeed, for thou givest much to others; and truly it is said, "it is more blessed to give than to receive." And the words of our correspondent remind us of that touching strain of Washington Irving: "There is a voice from the tomb sweeter than song; there is a remembrance of the dead to which we turn, even from the charms of the living." These we would not exchange for the song of pleasure, or the bursts of revelry."

Here, also, are the words of Rev. C. Waterson, of Boston:

"With what a marvelous vigor can the soul
Put forth its hidden strength, looking at death
As an angel from the courts of God!
And with what beauty, at the closing hour,
Will childhood's sweet affection blossom out."

[For the California Farmer.]

Aye! smile young mother, in all the joyousness of thy heart, over thy first born—God's precious gift, so lately bestowed. Beautiful as a dream is the soft, dimpled cheek, nestled so closely and confidingly to thine—the lovely eyes of heaven's own hue—the sweet, rosy lips, ever wreathed with a happy, innocent smile. Yes, 'tis all thine own, that little cherub face and form.

What depths of love, undreamed of before, hast thou discovered in thy heart, since this darling babe was added to thy household treasures. Bright visions of long, blissful years to come, rise before thee. Oh! how tenderly will you guard this lonely bud; shield with ever watchful care, from every rude wind or ungentle breath. What joy to watch the gradual opening and expanding of the infant intellect; and how will you mould that tender mind to your own thoughts and wishes; how each day will entwine more closely around your heart, the tendrils of the clinging vine.

Yes, smile on young mother—surely thou hast much cause for joy; into thy keeping, for a while, has been given an immortal spirit—one of God's own angels. * * * * *

The gushing music is hushed! Mournfully is the wail of grief borne upon the still air, breathing of lost hopes, heart-strings broken, and low trailing in the dust.

Fast and thick fall bitter tears, wrung from a heart torn—oh! so cruelly—upon the sweet, cherub face, now still and cold as marble. The bud is broken! even with the fresh dew of morning among its opening petals, it withered away. One cold, cold breath from the destroyer, and the beautiful flower was snapped from its stem; and now bitter tears of anguish bathe waxen cheeks and sweet lips, where the heavenly smile still lingers—even in death.

Brightly shines the sun without, but to the heart of that sorrowing mother, comes not a ray of sunlight. In that little coffin, strewn with pure, white flowers, her own dead babe, the fairest of all, has her sun set; with it, to go down into the grave. Life, lately so bright, has become but a vale of tears.

Weep for thy lost darling! no word or wish of thine can e'er call back thine idol! gone, forever gone from thy embrace. Smiles in the morning! tears of agony ere the noonday! and this is life.

But, listen! comes there not softly stealing through thy soul, gentle whisperings of hope and comfort. Even in this thy first great sorrow, hast thou cause for smiles and rejoicing. Higher and more holy, should be the joy within thy breast, than that which welcomed the birth of thy babe. Another angel in heaven! Gone home, pure and unsullied, ere the dark earth-stains had clouded the spirit's purity; not a taint of sin's poison ever shadowed that innocent heart.

A voice, more tender than thine, sweetly called the child, and, without a fear of the dark river, the babe obeyed.

Oh! yes, mother, look up and smile. Tears of anguish will fall, but through them all thou canst still smile in holy confidence and trust, knowing thy treasure is not lost, but forever free from all the sin and temptations of earth, infinitely more happy than thou, with all thy earthly love and wisdom, could have rendered it here. The spirit of thy child rests safely in the bosom of the Saviour. * * * *

The Young Bride.

OBSERVE that slow and solemn tread, when the young bride takes her wedded one by the arm, and, with downcast looks, and a heavy heart, turns her face from "sweet home," and all its associations, which have for years been growing, and brightening, and entwining so closely around the purest and tenderest feelings of the heart. How reluctant that step, as she moves towards the carriage; how eloquent those tears, which rush unbidden from their fountain!

She has just bidden adieu to her *home!* she has given the parting hand—the parting kiss! With deep and struggling emotions she has pronounced the *farewell!* and oh, how fond, and yet mournful a spell this word breathes! and perhaps, 'tis the *last* farewell to father, mother, brother, sister!

Childhood and youth, the sweet morning of life, with its "charm of earliest birds," and earliest associations, have now passed. Now commences a new—a momentous period of existence! Of this she is well aware. She reads in living characters—*uncertainty*, assuming that where all was peace—where all was happines—where home, was all in all to her. But these ties, these associations, these endearments she has yielded, one by one, and now she has broken them all asunder. She has turned her face from them all, and witness how she clings to the arm of him for whom all these have been exchanged!

See how she moves on; the world is before her, and a history to be written, whose pages are to be filled up with life's loveliest pencilings, or, perhaps, with incidents of eventful interest—of startling, fearful record! Who can throw aside the vail, even of "three score years and ten," for her, and record the happy and sun-bright incidents that shall arise in succession, to make joyous and full her cup of life—that shall throw around those embellishments of the mind and heart, that which crowns the domestic circle with beauty and loveliness; that which sweetens social intercourse, and softens, improves and elevates the condition of society? Or who, with firm and unwavering hand, can register the hours and days of affectionate and silent weeping—of midnight watching? Who pen the blighted hopes—the instances of unrequited love—the loneliness and sorrow of the confiding heart—the deep corroding cares of the mind, when neglected and forgotten, as it were, by him who is dearer to her than life—when all around is sear and desolate—when the garnered stores are wasted, and the wells dried up, and the flickering blaze upon the hearth wanes, and goes out! and leaves her in solitude, in silence and in tears? But her affections wane not, slumber not, die not!

The brilliant skies may shed down all their gladdening beauties; nature array herself in gay flowers, bright hopes—and friends, kind friends, may greet with laughing countenances and glad hearts, but all avail nought. One kind look,—one soft and affectionate accent, the unequivocal evidence of remaining love; one *smile* like that which wooed and won that heart, would enkindle brighter, and deeper, and lovelier emotions at its fountain, than heaven, with all its splendor, and earth, with all its beauties, and gay associations.

Oh! young man, ever be to the young bride what thou seemest now to be; disappoint her not! What has she not given up for thee? What sweet ties that bound heart to heart, band to band, and life to life, has she not broken off for thee? Prove thyself worthy of all she has sacrificed. Let it ever be her pleasure, as now, to cling with confiding joy and love to that arm. Let it be her stay, her support, and it shall be well repaid. Hers is an enduring—an undying love! Prosperity will strengthen it—adversity will brighten and invigorate it, and give to it additional lustre and loveliness! Should the hand of disease fall upon thee, then wilt thou behold woman's love—woman's devotion! for thou wilt never witness her spirits wax faint and drooping at thy couch! When thine own are failing, she will cling to thee like a sweet vine, and diffuse around thy pillow those sweet influences and attractions that shall touch the master-springs and nobler passions of thy nature—that shall give new impulse to life! Her kind voice will be like music to thy failing heart—like oil to thy wounds! Yes! she will raise thee, restore thee, and make the happy, if anything less than an angel's arm can do it.

She that marries a man because he is a "good match," must not be surprised if he turns out "a Lucifer."

PROSPECTUS
OF
VOLUME VII.
OF THE
CALIFORNIA FARMER.

THE CALIFORNIA FARMER was established in January, 1854; its success was a problem that the future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the virgin soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer FARMER expected to meet with obstructions, trials and difficulties, that would try our strength and temper too. But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he must meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—so our humble selves in the enterprise of the journal we then presented, we had faith—we were willing and ready to labor and toil—to do and to suffer—confident that ere long the goodness of the cause we had espoused, its happy and beneficial influences, with dignity, nobility, and prosperity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good—to them we and our cause are known—our desert at their hands is manifest.

To those who are strangers to us and the journal we publish, we again present the CALIFORNIA FARMER.

Our journal is devoted to Agriculture and all the useful sciences—it will ever be our aim to have the Farmer the true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the TRUE friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Homes of our glorious State. Free from every political, sectarian, or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that our means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication, we have access to facilities for information rarely obtained.

In the department of Education, of Home Influences, we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artisans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall esteem most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it in comparison, and abide the issue.

With grateful acknowledgments for a generous sustaining in years of trial, and with the assurance to our patrons of many improvements in the opening year, we ask their continued favor and generous influence for this journal.

The terms of the FARMER are, for the year (always in advance), $5.

v6-9 90 J street, Sacramento.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid.* Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by

J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

CHINESE SUGAR CANE,
OR,
SORGHO SUCRE.
PURE SEED.

THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 30 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,
W. P. ORME, Atlanta, Georgia.
ATLANTA, November 7, 1856. v6-22

SEEDS.
HOVEY & CO.,
DEALERS IN SEEDS,
No. 7 Merchant's Row, Boston, Mass,

ARE now receiving their new and fresh stock, embracing all the best and most desirable varieties of Agricultural, Garden and Flower Seeds, grown expressly for them by the most experienced cultivators. Purchasers who wish to obtain the most reliable Seeds are requested to forward their orders early.

Seeds packed securely for California or any other part of the country.

Also, from their own Nurseries, a very extensive collection of Fruit and Ornamental Trees and Shrubs, Grape Vines, Strawberries, Gooseberries, Roses, Greenhouse Plants, &c., embracing the best varieties in every department.

The Mathematical Works of Professor Davies are too well known to require special notice. They are the text-books (in connection with those of Professors Church and Bartlett) of the United States Military Academy at West Point, and nearly all the colleges in the United States. The elementary Course of Mathematics, consisting of the revised editions of Arithmetics, Algebra, Geometries, &c., and recommended by the superintendents of public instruction of Michigan, Illinois, Missouri, Wisconsin, Minnesota and North Carolina, and are used in the best schools and academies throughout the United States. Clark's English Grammar, Willard's School Histories, Parker's School Philosophy, Fulton and Eastman's Book-keeping, and Monteith's and McNally's School Geographies are also the favorite books in each of the above named States, as well as in all parts of the country where they are used. v7-4 2m

Important New Works,

The Farmer's Drill.
[PATENTED, AUGUST, 1853.]

THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct. 28th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.

Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.

This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.

For full particulars address
M. G. GRIFFITH, Agent, Diamond Springs, Cal.;
Or to C. FINKBONER
(Of the firm of G. W. Stewart & Co.),

J. L. POLHEMUS
DRUGGIST

OFFICIAL NOTICE!
POLHEMUS' DRUG STORE
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.
I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.
Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for
Half the Price Usually Charged
By other Druggists, legitimate or illegitimate, and of
The Purest Drugs and Chemicals.

THIRDLY.
I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.
We Keep Open all Night!
And charge no more for medicines than in the day time.

FIFTHLY.
We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.
Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.
We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.
Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.
Flower of the West, for Fever and Ague.
Delight's Spanish Lustral, for the Hair.
HUDSON'S CALIFORNIA GROWN MUSTARD.
Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.
We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.
v6-12 J. L. POLHEMUS.

PACIFIC MUSEUM,
Corner of Clay and Kearny streets.
INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!

THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Wolf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.

Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montes.

☞ A full Brass Band is in attendance every evening. Open every day and evening (Sundays excepted).
*** Admission 25 cents during the Day, and 50 cents in the Evening. v7-2

v7-6 3m PETER DONAHUE.

FIRST PREMIUM AGAIN!
R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.
Rooms, cor. Sacramento and Montgomery streets,
SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

Sale of the Superior Shorthorn Herd
OF THE LATE
NOEL J. BECAR.
To the Editors of the California Farmer:

DEAR SIRS: I wish to communicate through your columns, to the Breeders of Shorthorns, that I have been authorized, by the executors of the late Noel J. Becar, to dispose of his entire herd of far famed Shorthorns. We have also determined not to sell a single animal from that herd until JUNE, 1857, on the day of my annual sale, which generally takes place about the 20th.

Many inquiries have been made by letter, and otherwise, and I take this course to answer previous and future questions. A very full and explanatory Catalogue will be issued in due time, and very generally circulated to all my present correspondents, and as many others as may desire it.

Mr. Fordham, Westchester, N. Y., December, 1856. } L. G. MORRIS.

For Sale.

INDIA Rubber Packing, Submarine Dresses and Rubber Cement. For sale by
v7-6 2m BRYANT & CO., 68 Battery street.

From the East.

The steamer Sonora, Capt. Lapidge, arrived on Tuesday afternoon, from Panama, bringing Eastern news to Feb. 20th, with 646 passengers and 663 packages of freight.

A bill authorizing the Mints to pay out the newly coined cent in exchange for Spanish silver, at the old rates, passed both Houses of Congress on the 18th of February.

A bill to ascertain and settle private land claims in California passed the Senate on the 18th ult.

A bill is before the Committee on Post Offices, of the House of Representatives, to provide for the safe and convenient remittance by mail of sums of money not exceeding $25, by means of orders drawn by the postmasters on one another.

Mr. Peabody, the rich American banker, of London, has presented $300,000 to the city of Baltimore, for the establishment of a Free Library, a Musical Academy and Picture Gallery. The donation is to be increased, hereafter, to fifty thousand dollars.

Dr. Benjamin Hardinge has published a long and very surprising advertisement in a New York paper. The heading of it, subjoined, will give an idea of the important discovery he professes to have made. The advertisement covers several columns. Here is the beginning:

"Benjamin Hardinge's new process for extracting all the gold from quartz, by dissolving large quantities of quartz in water; and then using the liquid stone in molding granite, making artificial porphyry, jasper, marble, and almost all the precious stones, colored with mineral oxides and molded cheaply—promising to effect an entire change in building material, statuary, etc." The certificates of several respectable chemists accompany it.

The following is given in the N. Y. Herald. The names of the parties are not stated:

"A memorial has been presented from gentlemen of wealth residing in New York, asking Congress to give them the privilege of establishing a line of steamers to ply monthly between San Francisco, touching at the Sandwich Islands, and Shanghae, thence down the coast of Asia and across to Australia, touching at the Society Islands."

Spring has set in very early this year. The "breaking up" is pretty general throughout the country, and has been attended with freshets and inundations which have destroyed a great deal of property over the Union.

Land Titles.

By the following notice it will be seen that we are making good progress in the settlement of land titles, and this will do more for the prosperity of our State than all other causes put together. We rejoice most heartily at the prospect, for all parties now seem to be ready and willing to aid in the settlement of questions that shall give permanence to every enterprise:

United States Attorney's Office.—Notice has been received from the Attorney-General of the United States, per mail of 20th February, that appeal will be prosecuted in case No. 318, D. C., and 291, L. C., M. G. Vallejo and assigns claimants, for the land called "Suscol;" and that appeals will *not* be prosecuted in the cases following:

Family Physicians.—A good family physician, one on whose integrity and devotion an invalid can rely, a physician whose skill and knowledge is reliable in all cases, and whose cheerful presence under the most trying case comes like healing balm to a sick and weary invalid, such should be universally known; and no doubt we have many such in San Francisco, but a residence of some time at the Russetto House, San Francisco, has given us the pleasure of the acquaintance of Dr. Benj. Hardy, and we feel it is serving the cause of humanity to name one so highly deserving to be better known. When we first met the Doctor, his happy and cheerful salutations reminded us of a physician we once had during an illness of many months, and sick and helpless as we were we longed for the hour of his appearance, for we felt his very presence was better than medicine; it was our best medicine; and his faithful, cheerful and devoted attendance saved our life. Such men we feel are physicians, indeed; they administer to the mind, heart and body—and such physicians are the most successful.

BOOKS, &c.

The Fruit Garden.
By P. Barry,
Of the Mount Hope Nurseries, Rochester, N. Y.

A TREATISE intended to illustrate and explain the Physiology of Fruit Trees; the Theory and Practice of all operations connected with the Propagation, Transplanting, Pruning and Training of Orchard and Garden Trees, as Standards, Dwarfs, Pyramids, Espaliers, &c.; the laying out and arranging of different kinds of Orchards and Gardens; the Selection of suitable Varieties for different purposes and localities; the Gathering and Preserving Fruits; Treatment of Disease, Destruction of Insects; Description and Use of Implements, &c. Illustrated with upward of 150 Figures, representing the different parts of Trees, all Practical Operations, Forms of Trees, Designs for Plantations, Implements, &c. 1 vol., 12mo., cloth. Tenth Thousand.

HOMES FOR THE PEOPLE IN SUBURB AND COUNTRY; Or, The Villa, the Mansion and Cottage Adapted to American Climate and Wants. By Gervase Wheeler. 1 vol., 12mo., with 100 Engravings. Third Edition.

"Good taste, practical common sense, and an eye to the usages of the country appear throughout the work, while its designs and illustrations will prove an invaluable assistance to those who wish to build, and to build wisely and well."—*N. Y. Evangelist.*

"The author's study has been to furnish models for convenient, tasteful and even elegant suburban and country dwellings, from the lowest to a high cost, and to afford all the necessary information for their construction. We should like to see such books wide spread, as our national architecture needs improvement."—*Philadelphia Presbyterian.*

"There are abundance of books on architecture and on landscape gardening, but an actual absence of such another volume as the present. The designs are exceedingly tasteful, and imbued with the highest spirit of architectural beauty."—*N. Y. Express.*

Copies of either of these books sent by mail (post-paid), for $2, remitted to

Valuable Works
PUBLISHED BY
BLACKIE & SON,
No. 117 Fulton street, New York.

A HISTORY OF THE EARTH AND ANIMATED NATURE. By Oliver Goldsmith. With numerous notes from the works of the most distinguished naturalists. Illustrated by nearly 2,400 figures, of which 230 are beautifully colored. Two vols. large 8vo.

RHIND'S HISTORY OF THE VEGETABLE KINGDOM. Embracing the Physiology, Classification, and the Culture of Plants; with their various uses to Man and the Lower Animals, and their application in the Arts, Manufactures and Domestic Economy. Illustrated by 700 figures engraved on Wood and Steel, of which 100 are elaborately colored. One vol. large 8vo.

THE FARMER'S GUIDE. A Treatise on the Diseases of Horses and Black Cattle, with Instructions for the Management of Breeding Mares and Cows. By James Webb, Veterinary Surgeon.

HOW TO CHOOSE A GOOD MILK COW; or, a Description of all the Marks by which the Milking Qualities of Cows may be Ascertained. With a Supplement on Dairy Cattle, their Qualities, Management and Productive Results, with Hints for Selecting. Illustrated with Engravings.

☞ Samples of the above Books can always be seen at the Office of California Farmer, where Catalogues will also be found. v7-6

The Most Successful and the Best.
NOW COMPLETE AND FOR SALE,
SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
Six Charts for Primary Schools.
The Standard Primer. Illustrated with cuts.
By Epes Sargent, author of "Standard Speaker," &c.

The following are nearly ready:
Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

Sargent's Standard Speller contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

Rural Publications.

THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages Two Dollars per annum. "Without question the best Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."

THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.

THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.

SPECIMEN NUMBERS
Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to

HORTICULTURAL.

Commercial Nursery,
Three-Quarters of a Mile East of the City of San Jose.
THE Proprietors of this Nursery, having received the award of the
FIRST PREMIUM
OF THE
STATE SOCIETY
the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of
FRUIT AND ORNAMENTAL TREES,
For the Trade of 1856 *and* 1857,
that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.
Our Stock consists of
One Hundred Thousand Trees,
FROM FOUR TO ELEVEN FEET IN HIGHT.
Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;
TOGETHER WITH
Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.

Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.

Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.

Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.

Catalogues can be obtained at the Nursery, or mailed to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.

☞ Our Agents are as follows: Locount & Hill, San Francisco; Roes & Norcross, Sacramento; A. G. Brown, Stockton.

All communications addressed to the subscribers will receive prompt attention.
SMITH & WINCHELL.
v7-1 3m

Smith's Pomological Gardens
AND
NURSERY.
On the American River, 2½ miles from Sacramento.
THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of
Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants
to be found in any one establishment on the Pacific Coast. Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple,	Peach,	Pear
Cherry,	Nectarine,	Apricot,
Fig,	Currant,	Gooseberries,
Raspberries,	Strawberries,	Grape Vines,

All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.
Among the fine Trees are the following varieties:

Elm,	Locust,	Catalpa,
Maple,	Laburnum,	Weeping Willow,
Ash,	Allanthus,	and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous to mention.

We would call particular attention to our large stock of extra size Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

☞ Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.
A. P. SMITH.

NOTICE.
We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff,* very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.

San Jose Nursery.
THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of
FRUIT AND ORNAMENTAL TREES,
ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.

Apples, 112 varieties,	all best kinds;	
Pears, 97	"	very select;
Peaches, 69	"	all approved;
Cherries, 25	"	fully tested;
Plums, 27	"	very best.

The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer
Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.
In each of the above the very best and most approved varieties.
The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—
Black and Honey Locust;
Chinese Allanthus, Catalpas.
—Also,—
20,000 Mulberry Trees,
All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.

ROSES! ROSES!! ROSES!!!
In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 90 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.

The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.

Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.

The French Garden,
Near the Cottage, on the Santa Clara Road.
A. DELMAS,.....PROPRIETOR.

GRAPE VINES! GRAPE VINES!!
THE Proprietor of these extensive grounds would take pleasure in calling the attention of the public to the very great collection of Grape Vines, which he will offer the present season.

The Fruit from this Garden was exhibited at the late State Fair, and received the Diploma of the Society. The White Wine made from this Vineyard received the First Premium of the State Society. This Vineyard also obtained the First Premium for the Best Vineyard of Foreign Grapes, the present year.

The Proprietor will offer the present season his grand collection of Eighty One Varieties. Among this splendid assortment will be found—
Black Hamburg;
Chasselas of Fontainbleau;
Chasselas of Frontingnac;
Cannon Hall Muscat;
Muscat of Alexandria;
Charlesworth's Tokay;
Syrian; Black July;
Golden Chasselas;
Together with every variety of the Grape known and approved.

The undersigned is confident that this collection is the largest and most complete in the country, and to this the attention of the public is particularly invited.

The subscriber would also offer—
APPLE, PEAR, PLUM, PEACH, APRICOT, NECTARINE, and other Fruit Trees,
—Also,—
RASPBERRY, CURRANT AND GOOSEBERRY TREES,
In good assortment.

Catalogues of all the varieties grown in this Garden will be sent to all who desire them, by addressing letters to the proprietor.

All orders will be answered promptly, and Trees and Vines carefully packed for any place in the country.

THE LAW OF NEWSPAPERS.
1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscriptions.
2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.
3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.
4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.
5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.
☞ Postmasters would oblige, by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.
Postage of the Farmer.—The Postage of the Farmer to any part of the State is only 6½ cents per quarter, or 26 cents per year. This is the lawful postage established by Congress, and when more is exacted it is a violation of law

Agricultural Reviews and Essays—No. 7.

Japan.

"COMMODORE PERRY'S Japan Expedition. By Francis L. Hawkes, D. D." (D. Appleton & Co., New York)

"TRAVELS of Marco Polo; edited by William Marsden, Esq." (London.)

"HARRIS'S Collection of Voyages" (London.)

"NARRATIVE of my Captivity in Japan, during the years 1812 and 1813; with Observations on the Country and People. By Captain Galownin, R. N.;" to which is added "An account of the Voyages to the Coasts of Japan, and the Negotiations with the Japanese for the release of the Author and his Companions. By Captain Rikord." (Colburn & Co., London)

THE success of our distinguished naval officer, Commodore Perry, in his expedition to Japan, by means of which a trade with that country, hitherto denied to all nations, but the Dutch and Chinese, has been opened to the world, and which, from our proximity, may be of such advantage to California, is a great event in History. I suppose, therefore, that those who feel disposed to excuse me for introducing to their notice the importance of availing ourselves of every procurable information regarding the condition of China, will be equally tolerant towards me in regard to Japan.

A great deal of the wealth which was once attributed to those fortunate Islands, and which was used by the great Columbus as an inducement to influence the monarchs of Europe to send him westward in search of them, is doubtless fabulous. And when we reflect that his only authority was Marco Polo, who towards the close of the thirteenth century was engaged in the service of the great Kublai-Khan in China, and who, though the most distinguished traveler of his time, had never been in the country, while we give the great discoverer credit for his acuteness in using such a strong *argumentum ad hominem*, we see at once the propriety of having more reliable information. But there is room for allowances, with the probability of enough being left behind to satisfy people of moderate views; for Marco Polo writes like another "Sinbad the Sailor." "The entire roof of the sovereign's palace," says he, is covered with gold, in the same manner as we cover houses and churches with lead. The ceilings of the halls are also of the same precious metal, and many of the apartments have small tables of pure gold considerably thick. So vast, indeed, are the riches of the palace, that it is impossible to convey an idea of them. In that country there are pearls also of great value. There are also found there a number of precious stones."

It was not, however, till fifty years after the discovery of America by Columbus, that the Islands of Japan were set foot on by Europeans. The attention of the World was turned to other objects. Spain was content with her American discoveries; and Portugal in having succeeded in doubling the Cape of Good Hope. England had her private matters at home to settle, which concentrated her energies there; and France had not begun to be great as a maritime power, and has never to this day directed her attention to maritime discovery. But in the year 1542, a Portuguese ship bound for Macao, in China, was driven from her course, and forced by the storm upon one of those islands.

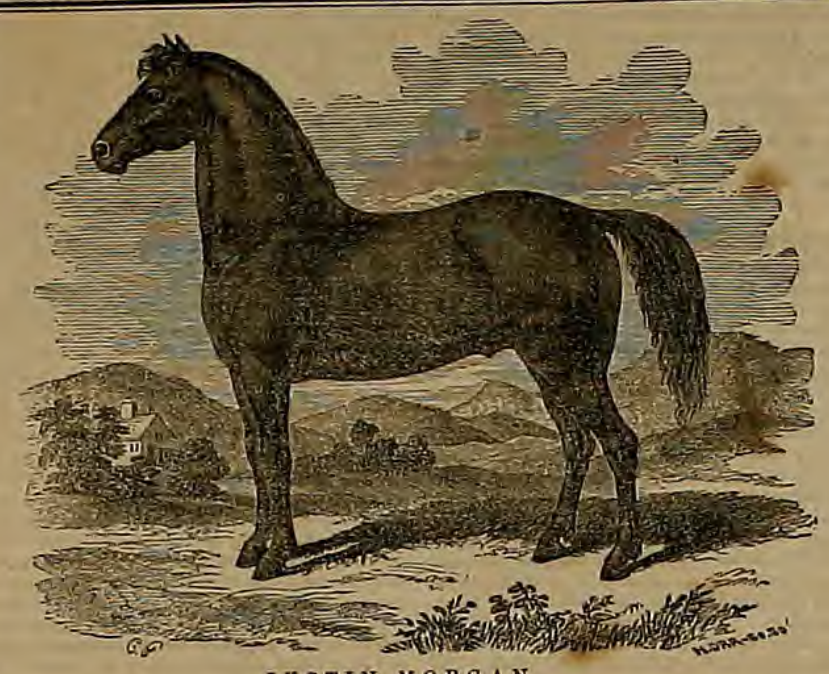
Unlike their descendants of later times, the Japanese authorities of those days received them with much courtesy, and freely allowed them to traffic with the inhabitants. And if it had not been for the religious prepossessions of their European visitants, it is likely that those restrictions which have prevailed so long would never have been imposed. On their first arrival, they succeeded in making an arrangement with the prince of Bungo, in consequence of which a Portuguese ship was sent once a year to that island, laden with cloths, furs, silks and other commodities; and everything wore the appearance of a disposition on the part of the natives to admit a friendly trade. But the eyes of the Church were turned towards those Eldorados of the Eastern Ocean; and Francisco Xavier, a joint founder with Loyala of the order of the Jesuits, reached that country not more than seven years after the errant Portuguese had been driven on their shores. He was cordially received by the emperor, and allowed to preach the gospel in peace; and many became proselytes to the new religion. But by and-by the intriguing spirit, for which that order, it is said, has ever been distinguished, began to manifest itself, and produced such an ebullition of popular indignation as ended in the massacre of the whole catholic population, and the establishment of a code of laws so strict, that, intercourse with foreign countries, or foreigners, under any circumstances, was prohibited by the severest penalties.

But before this melancholy persecution took place, the Dutch had discovered the profitableness of the Japanese trade. So early as the year 1598, William Adams, of Limehouse, London, hired himself, as he quaintly writes, "for chief pilot of a fleet of five sail of Hollanders, which was made ready by the chief of their Indian company, Peter Vanderhaeg, and Hans Vanderguct; the general of this fleet was Jacques Mayhay in which ship, being admiral, I was pilot."

Of this fleet or squadron, which sailed from the Texel on the 24th of June, 1598, only one vessel, in which was our pilot Adams, reached Japan, and that not before the 11th of April, 1600; with the crew in such a deplorable condition, and after enduring such hardships, as convinces any one that the special petition, "for all those who travel by land or by water," in the English liturgy (composed a short time previously) was not, at that time, so superfluous as it now appears to be. "Great," says Adams, "was the misery we were in, having no more than nine or ten men able to go or creep upon their knees; our captain and all the rest looking every hour to die." The Portugnese priests, too, did everything they could to influence the royal ear against the hapless adventurers, representing them as unbelieving heathens and blasphemers, but the emperor, actuated by a sense of justice, was pleased to order Master Adams and one of the marines to be brought before him. "So," says he, "taking one man with me, I went to him; taking leave of our captain and all the others, who were sick; and commending myself into *His* hands who had preserved me from so many perils on the sea. The 12th of May, 1600, I came to the great king's city, who caused me to be brought into the palace, being a wonderful costly house with gold in abundance. Coming before the king, he viewed me well, and seemed to be kind and wonderfully favorable. He made many signs unto me, some of which I understood, and some I did not. In the end there came one who could speak Portuguese. By him the king demanded of what land I was, and what moved us to come to his land, being so far off. I showed him the name of our country, and that our land had long sought out the East Indies, and desired friendship with all kings and potentates in way of merchandise, having in our land diverse commodities which these lands had not, and also to buy such merchandise in this land as we had not."

The most eloquent advocate of "Free Trade and Sailors' Rights" could not have used more forcible arguments. But Adams was no common man, and boasts a little of his being well known at home, and having moved in good society. "I am a man," says he, "not unknown in Ratcliff and Limehouse. I am well known to my good master, Nicholas Diggins, and Mr. Thomas Best, and Mr. Nicholas Isaac, and Mr. William Isaac; also to Mr. William Jones, and Mr. Becket." But he had other qualifications which doubtless did more to recommend him to the special favor of the emperor. "I was in such grace and favor with him, and pleased him so," says he, "by reason I taught him some points in *geometry* and the *mathematics*, that what I said could not be contradicted. In process of four or five years, the emperor would have me make him a small ship. I answered that I was no carpenter, and had little knowledge thereof. 'Well,' saith he, 'do it as well as you can; if it be not good it is no matter.' Wherefore, at his command, I built him a ship of the burden of eighty tons, or thereabouts; which ship being made in all proportions as our manner is, he coming aboard to see it, liked it well; by which means I came into favor with him, so that I came often into his presence, and from time to time he gave me many presents." Adams afterwards built for the emperor another ship of 120 tons burden, in which he made a voyage from Miaco to Jeddo. For these services he was amply repaid. "Now," continues he, "for my service which I have done and daily do, being employed in the emperor's service, he hath given me a living like unto a lordship in England, with eighty or ninety husbandmen, who are as my servants and slaves. The precedent has never been done before. Thus God hath provided for me after my great misery; to his name be the praise forever. *Amen.*"

What a pity that a people so generous and friendly should have got so excited, through the intrigues of an infatuated priesthood, as to prevent so long those international civilities and interchanges of commodities, for which one would have thought so good a foundation had thus been made! It is true, the Dutch managed to be allowed all along to carry on a little trade, but they were so abjectly humble as even to deny that they were christians, and submitted on particular occasions to tread upon the cross, that universal emblem of christianity, as an evidence that they spoke the truth. Who pities them, therefore, if they have been confined to the wretched little island of Desima, occupying a space of about 600 feet in length, by 240 in breadth? or, if they have been guarded like prisoners by a party of soldiers, who allowed none to come out or enter without leave? What a striking contrast is there between their cringing behavior, and the frank and manly conduct of our spirited commodore!



JUSTIN MORGAN.

THE above cut is from a work on the Morgan Horses, lately published by C. M. Saxton & Co., New York, which says: "The different accounts that have been circulated in regard to the origin of the Morgan breed of horses, agree that they are descended from a horse called the Justin Morgan [represented above], who derived his name from Mr. Justin Morgan, of Randolph, Vt., once his owner. As to the origin of the Justin Morgan, however, they differ widely."

The Islands of Japan, now happily rendered accessible to the merchant, are allowed by all to be exceedingly rich in the precious metals. Gold is washed out with them, as with us, from the banks of the rivers, and is also extracted in small quantities from their copper, which is said to be of a superior quality. The northern districts of the great island of Niphon form the principal gold region, where it is of better quality, and found in greater abundance. Silver mines are described as being quite as numerous as the gold mines, and the quality also superior. In one year the Portuguese carried away 2,350 cherts of fine silver, worth about three million of dollars. Copper also, it is said, of the very best quality abounds in all the islands. It was formerly one of the chief commodities purchased by the Dutch, who some years carried off from thirty to forty thousand pekuls, each pekul being about 133 pounds.

It is to the early voyagers that we have to look principally for information regarding this mysterious country; for with the exception of Galownin, a sea-captain in the Russian service, who, in the beginning of the present century, was detained for several years as a prisoner, the intercourse of foreigners with the exclusive Japanese, for the last two hundred years, has been so restricted as to confine their opportunities of observation to the cities and towns along the coast. From those we learn that the country is governed jointly by two sovereigns, a temporal and a spiritual, of whom the former was once the mere deputy or agent of the other. He seems, however, to have gradually gained accessions of power, while that of his associate has been gradually on the decline. We also learn from them that the constitution of society is purely aristocratic, being divided into eight distinct classes; and that the law of primogeniture is strictly maintained. They represent them as a brave, a generous and refined people, and possessed of a degree of civilization far exceeding that of their neighbors, the Chinese.

The industry and skill of the Japanese, *as agriculturists*, have gained the praise of all travelers who have visited and written about the country. Not only the fields and flat country, but likewise the hills and mountains are made to produce corn, rice, pulse, and numerous edible plants. Every inch of ground is improved to the best advantage; and it was not without astonishment that the old travelers, on their journeys to and from the imperial court, beheld mountains, inaccessible to cattle, cultivated to their very tops. This they effect by building up terraces, rising above each other, and having recourse in such cultivation to manual labor only. The same system, we are told, prevails in China; and the traveler in Europe cannot have failed to observe a similar practice resorted to by the vine-growers of the Upper Rhine.

Of all the vegetable productions of the country, the *urusi* or varnish-tree seems most entitled to consideration. It belongs to the same family, if it is not the same plant, as the poison-oak (*rhus toxicodendron*) of this country. On incision it yields a rich, milky, glutinous juice, out of which the Japanese make their celebrated varnish. With this varnish they cover and coat all their household furniture, all their dishes and plates, and all their drinking vessels, whether made of wood or of paper, all using them from the emperor down to the meanest peasant.

The country abounds in flowers, and flowering shrubs. The *subacki* is a pretty large shrub, growing in woods and hedges, and bearing flowers not unlike roses, and of which there are said to be 900 varieties. The *satsuki* is another shrub, bearing flowers like the lily, and offering many varieties. The two sorts which grow wild, one with purple and the other with scarlet flowers, are a great ornament to the hills and fields, "affording," says old Kampfer, "a sight pleasing beyond description." Besides, who can fail to admire the Camelia Japonica, which has become quite a common green-house plant?

By all accounts their manufactures are of a much more substantial character than those of the Chinese, and at the same time equally neat and elegant. "With respect to steel manufactures," says Galownin, "the Japanese sabres and daggers surpass all others in the world, those of Damascus, perhaps, excepted. They bear extraordinary trials. The Japanese are extremely skillful in polishing steel and all other metals. They make metal mirrors, which, for their object, are scarcely inferior to our looking-glasses. Their saws are so good that with them the thinnest boards may be sawed out of the hardest wood." They also manufacture astronomical and mathematical instruments, with sufficient accuracy to enable them to make ordinary observations and measurements.

The natural inference of all which, as it appears to me, and which I believe any sensible man will come to, after mature reflection, is, that it is not enough to have merely succeeded in having the ports of a country of so interesting a character opened to us. We want to be allowed to travel freely through the interior. We want to explore the mineral resources of those Islands. We want to ascertain their mode of cultivation, as adopted both by gardeners and common farmers. We want to trace out by proper investigation the resources of the country; so that our trade with it may assume a vigorous character. We want, for the sake of science, to become acquainted with its botany, geology, and zoology. And we want besides, the full exercise of our birthright as freemen, that "wherever our Maker has land" our feet may tread in security and peace, and that the title of an American Citizen may be a sufficient passport for admission into every country under the sun.

AGRICOLA.

The Triumphs of Labor.

THE following eloquent Essay upon the Value, Influence, Power and Triumphs of Labor, by our valued correspondent from Johnsonville, will be perused with interest by all classes of our readers, it is a happy, a prophetic glance of the future, and as certain to be fulfilled as that time rolls on—we of course allude to the march of science. The kind wish and words of of cheer tendered us we fully appreciate, and it shall nerve us to greater effort.

The workingmen of California hold the power, most assuredly, to accomplish great things. No one can for a moment doubt the fact that we have the very best class of Mechanics in every department of labor carried on now, that can be found in the world—workingmen of genius and talent of the very highest order. What is now wanted is to bring their interests into combined action for their own advancement. We are glad they have so able an advocate as their friend at Johnsonville, from whom we hope to hear often.

That our friends may know where Johnsonville is, we would say it is a small village five miles north of Mount Ophir, in Mariposa county, near the famed Josephine Quartz Mine; and we are most happy to learn that the mill of E. L. Beard, Esq., is doing well, yielding $40 per ton:

EDITORS FARMER: The interests of labor are now engaging the attention of the philanthropists and enlightened statesmen all over the world, and being one of the great mass known as workingmen, I feel a lively interest in everything that pertains to labor. It is the duty of all good governments to protect the laboring millions by wise laws and just compensation. It is the workingman that makes the best soldier, the best sailor, the best engineer, the best mechanic, the best citizen, the best statesman and the best propagandist of free principles. Educate the workingmen, and you will get the most practical legislators and the most thorough political economist.

There are many reasons why the laborer should be protected by society and by wise legislation; the government works well enough while at peace with foreign nations, but when the tocsin of war is sounded on our frontier, to whom does the government look for its aid and protection but to the laboring men of the country? It is his strong arm and enduring body that will bear up under the long march, the supperless bivouac, and the desperate battle.

The government may in times of peace build great forts and construct great ships, but when the strife comes, the surest breastwork is the broad chest and powerful arm of the laborer. It is then that labor stands proudly forth before the world and asserts its supremacy over the idle races of men; the strong arm of the Saxon subdues the savage and idle races of men on every continent, and in due time they will push their conquests over every savage and uncultivated country on the globe. And it's right. This is the "manifest destiny" of the Anglo-Saxon race; they will subdue every savage tribe, cultivate every uncultivated region, and finally the whole earth will be made to blossom as the rose; the vast forests and jungles of America will teem with intelligent millions of free and happy men and women; Africa will be regenerated by the intelligent working Saxon, and be made to open her vast wealth to the commerce of the world; and this earth that now has a population of about one thousand millions, will be made by workingmen capable of sustaining one hundred thousand millions of souls—and all this vast difference is to be the result of skillful and intelligent labor. Educate the poor, enlighten the laborer, enable him to unite the skill of science with a strong and ready will, and the results will far exceed the comprehension of our wisest men.

Put one hundred millions of intelligent workingmen on the North American continent, and you will soon see great canals uniting the two oceans across Central America; the iron road will span the continent on every four parallels of latitude; the magnetic wire would inclose us like a fine network of quick intelligence that would thrill the lightest touch from pole to pole and from ocean to ocean, so that no hostile touch could pass unknown by the whole republic. In fact the intelligence of the whole mass would become so completely united that it would seem as a lake of pure water, that would all be moved by throwing one small stone upon its bosom; the union of the waters of the lake is not more intimate than the sympathies of a united and intelligent brotherhood. Each one would feel the wants of his brother, and the want would scarcely be felt before the supply would be on hand to satisfy it.

All these grand results will be the legitimate offspring of labor and skill combined. How glorious the cause of labor and science? How grand the results to be obtained? How cheering to the philanthropist, and how full of promise to the toiling millions of the earth?

Then work on, dear FARMER, in the great and glorious cause of *labor and science;* you shall soon be paid back by the toiling sons of your adopted State, and in your declining years you shall see the fruits of your labor in the drainage of swamp lands, the construction of great iron roads, the successful working of the quartz mill, and the building up of a great empire of intelligent workingmen on the shores of the Pacific, and the FARMER shall be their favorite organ. So mote it be, is the sincere desire of your friend,

J. E. CLAYTON, M. E.

JOHNSONVILLE, Mariposa Co., March 16, 1857.

SCHOOL LANDS.—In a communication of the State Treasurer to the Assembly, it is stated that 235,360 acres have been located under School Land Warrants.

Smut in Wheat.

This is a question of such vast moment to all grain growers the world over, that we feel called upon to publish everything that will throw any light upon the subject, or be of any use in removing so foul a disease.

The following letter and extracts, sent us from Lodi, Seneca county, N. Y., although received late, and although it tries to repudiate the plans pursued here with perfect success, yet if it will serve to call out discussion which shall end in good results, even at this late day, we shall rejoice. We are pleased and thankful to our friends at New York for their kindness, and shall be happy to hear from them often:

—

Gentlemen: The kindness of a friend (G. M. Cole, of your county), furnished me with a Number of your California Farmer, dated Dec. 26, 1855, in which I found a communication from Mr. Morley, of La Grange, in which he gives it as his "opinion" that "*bluestone*, dissolved in water applied to wheat, and *dried with lime*, will prevent smut." I am entirely unacquainted with "bluestone," and the effects of it, poisonous, or not; but I am, from long experience, perfectly satisfied that no possible application to seed wheat, *before sowing in the fall*, will, *certainly*, prevent smut in the next summer's produce. The *theory* is absurd; and I have tested the falsity of it to my entire satisfaction.

Supposing the results of my observations and experiments in regard to the *cause of smut* might be useful to the *practical* farmers of your State, I send to you a copy of a communication, consisting of several numbers, &c., a part of which was published in the Albany Argus, in February 1833, and the *whole* was published in the Genessee Farmer, in March and April 1850, from which last paper I have cut it out for your use, if you see proper to publish, or rather to republish, it.

If you publish it be so good as to send to me, at my residence at "Lodi, Seneca Co., N. Y.," one or two copies of each of your papers containing it, as I have now no printed copy. "Scientific Professors" (so called), may (as they have in this country), attempt to cast ridicule upon my facts as well as upon my inferencs. If so, I can furnish you with more "copy," containing many additional facts, as well as arguments, in support of my opinion. If you wish to learn more of me I would refer you to my friends, G. M. & Cornelius Cole, Esqs., of your city and county [Sacramento].

J. H. Halsey.

Messrs. Warren & Co., Publishers Cal. Far.

Lodi, Sen. Co., N. Y., Feb. 12, 1857.

—

On Smut in Wheat and the Cause of it.

Messrs. Editors: This being a season of the year when practical farmers have the most leisure time during the day, with long winter evenings in which to read, reflect, and learn the ways of men and things, I propose to furnish for your useful and widely circulated paper a few communications, containing statements of *facts* in relation to agricultural matters, as they "came to pass" with me, together with such inferences and opinions as I have formed upon those facts; and inasmuch as I have recently observed in newspapers some publications in which the old, absurd, and (as I had believed) exploded hypothesis of the "*fungus*" origin of smut in wheat is revived and inculcated, I will begin with that subject.

During the winter of 1833, while spending some months in Albany, I wrote and published in the Albany Argus a series of articles, containing my observations and experiments continued through several successive years, in relation to the "cause of smut." Those articles were written in the plain, common language of the country (as all such communications should be), and addressed to *practical farmers*, as being the persons most immediately intereated in the subject matter of them. A series of experiments, continued through the past *sixteen* years, has in every respect corroborated the statements made in my former publications on this subject. I will, therefore, here request you to insert those articles as follows:

NUMBER I.

I have read many essays on the subject of the smut in wheat, and almost every writer has invented a new hypothesis as to the cause of it. In the *refinement* of their theories (like philosopers in most other speculations), they have, in my opinion, wholly "overstepped the modesty of nature, in their vague conjectures about "*invisible insects*," "*vitiating principles in the air*," "*diseases from unseasonable cold and wet*," and that *smut is of an animal nature*, &c., &c. None of these theories or conjectures were satisfactory to my mind; but as I had not sufficient information to enable me to controvert them, or even with any propriety to question them, until very recently, I have remained silent, hoping that some one more capable than myself, would undertake a series of observations and experiments, which might result in a discovery of the true cause. Not being aware that any one has done so, and believing that some facts in my possession relating to this evil may be of service to intelligent farmers (by drawing their attention to it, if in no other respect), I will proceed to state them. It is perhaps proper here to premise, that for several years previous to 1830 my wheat had been considerably affected by smut; but by letting it remain in the field, *uncut*, until it was thoroughly, or *dead* ripe, the smut grains became so perfectly dry, that when the crop was threshed, they were very nearly all broken. The dust was cleaned out by the fanning mill, leaving the wheat entirely free from the smut usually found sticking to the "*downy*" end of the grain. In the summer of 1830, finding that my wheat had an unusual quantity of smut in it, I determined, if possible, to discover the cause of it. I commenced my operations by pulling up the stools of the smut wheat and examining the roots. In all cases (and I examined a very great number) I found the roots mouldy and rotten, the outer covering or "bark" had evidently been eaten off by some worm or insect; but of what kind, I was unable to ascertain. After several days of fruitless examination, I accidentally discoveed on one of the smut ears a very small ash-colored *bug*, about an eighth of an inch in length, something less than a line in diameter, and about a line in hight. It appeared to be busily employed in gnawing its way into the husk or chaff of one of the smut grains; in a few moments it perforated the chaff, and begun to feed greedily on the smut grain within. My curiosity was excited by seeing that little insect feasting, with much apparent satisfaction, upon a substance that I had supposed no animal in the world would eat. After some reflection, it appeared to me that many animals appear to have an innate knowledge or instinct, which pointed out to them the best mode of preparing their food; and observing that this bug seemed to be feeding on its natural aliment, I determined to make some experiments for the purpose of ascertaining what agency (if any) this species of bug had in the production of smut. On a careful examination, I found one or more bugs on almost all the smut ears. A day or two afterwards, I took a small clean glass bottle, into which, after much care and trouble, I succeeded in putting three or four smut ears with about a dozen bugs on them; a paper cover was then tied over the mouth of the bottle so closely that no insect could get in or out. The bugs continued to feed on the smut grains for about three weeks, when they all died. Thinking it probable that they had deposited their nits or eggs in the smut grains, I took the smut ears and dead bugs out of the bottle, cleased it thoroughly, brushed the dirt off the ears, and again put them into the bottle, which was closed as before. Within about four weeks I had a considerable number of young bugs hatched out, which immediately began to feed on the remaining smut grains. I kept them several weeks, until during autumn they all died also.

NUMBER II.

During the summer of 1831, I again found that my wheat was smutty, and repeated my experiments upon the same species of bug (mentioned in my first number), of which I found great numbers on the smut ears. As in the preceding year, I put as many of the smut ears with the bugs on them, in my bottle as it would conveniently hold: as before, the bugs all died in the course of three or four weeks. I then carefully examined many of the smut grains, in nearly all of which I found a small maggot or worm. Some were about an eighth of an inch in length, and in diameter nearly as large as the parent bugs; others were smaller, and several so small as to be scarcely visible to the naked eye. In some of the grains I could not discover any maggots, probably because they were too minute to be visible to the naked eye, and I had no lens with which to examine them. The remaining smut grains were left untouched in the ears, put into the bottle again, and in two weeks again had another full crop of bugs hatched out. These last, with the smut ears in which they were bred, are now in my possession. A few days after I had found the bugs in my bottle were hatched out, I observed immense numbers of the *smut bug*, as I shall hereafter call them, almost literally covering the floor and timber of the barn where my wheat was housed. There must have been millions of them. No doubt they had been bred in the smut ears carried in with the wheat. Within three or four weeks they had all disappeared. Those which I saw in the fields were extremely shy, and upon the slightest touch of the ear fell to the ground, where they laid perfectly still and inanimate, *feigning*, as it would seem, to be dead. Being so small, and in color approaching to that of the soil (a gravelly clay), it was very difficult to find them. After remaining quiet, however, for a few minutes, they ran up the stem of the smut wheat and resumed their feeding on the smut. They were quite active in *running*; but whether they ever did or could *fly*, could not be ascertained. Their habits appear to be similar to those of the pea bug; and on a close examination, several smut heads were found, in which all the grains had evidently been perforated near the lower part in the same manner that pea pods are found to have been perforated by the pea bugs. The punctures were so minute as to be scarcely perceptible to the naked eye; but no doubt with a good glass all the smut grains would have been found perforated in the same manner.

Upon much reflection I have come to the conclusion, that smut wheat is the natural food of the bugs described. There may be, and very probably are, other vegetable substances upon which they sometimes subsist when their natural aliment is not to be obtained. But as *conjectures* without *facts* upon which to found them are oftentimes worse than useless, none are suggested at present, although (if convenient) some may be hazarded in a future number.

That the smut is *not produced by a diease in the plant*, is thought conclusively proved by the facts stated. But if additional proofs were wanting, they are at hand, sufficiently strong as imagined to convince the most skeptical, in some circumstances which took place on my farm during the past year. The year previous, much pains had been taken to procure seed wheat perfectly free from smut for one field. The land had been in clover about three years; it had been plowed three times and was in excellent order. The wheat was sown in good season, and in the fall looked very well; it continued to grow finely until it eared out, when it was found to be more smutty than any other on the farm, although two fields which had borneu smutty crop the previous year had been again sown. I was at a loss how to account for this, until it was recollected that the *clean* field which I had sown with *clean* wheat had been well *manured* a few weeks before the wheat was sown. The manure was taken from the barn yard where all the straw and chaff of the smutty crop of the previous year had been thrown after being threshed. The smut grains of the former crop were undoubtedly carried into the field with the manure. In these smut grains, probably, the *maggots* of the smut bug existed in great numbers, and thence came the *insects*, which smutted the wheat to so great a degree as to amount, probably, to one-tenth of the whole crop in the field.

NUMBER III.

In my former articles I gave a statement of facts. A leisure moment affords me an opportunity of giving my *theory*, founded on those facts.

I suppose the smut bug (or its precedent worm) to remain in the ground in a torpid state, during the winter, like the common fruit curculio. When the spring opens with sufficient warmth, it revives and commences its work of destruction by attacking the *roots* of the young wheat. I am led to believe this the more readily because, as stated in my first article, I have invariably found the vitality of the roots of the smut wheat destroyed by some worm or insect; and I can imagine none so likely to commence the destructive process as that which completes it, by its operations on the grains in the ear. It therefore probably feeds on the bark, or outer covering of the roots, until the time of the earing or "heading out." Those plants which have been thus injured, generally throw up feeble stems, with small ears, not having received the proper quantity of nourishment from the roots. As soon as the ear appears above the sheath, and and when it may be supposed to be in a critical state of gestation, the bug leaves the roots (the bark of which has become too tough, or too scanty, to supply it with suitable food), and climbs the stems to the ear, where it consummates its destructive operations by perforating the chaff cases of the grain, within which it deposits its nit or egg. The puncture probably injures the small vessels which would otherwise supply the grains with their proper nourishment (in whole, or in part), and causes an entire change in the substance of the grain. This change renders it the proper and natural food of the bug. It also becomes the fit receptacle for the deposition and nurture of the ova of the insect. I suppose the change in the grain to be produced by the perforation of the case, or chaff, and deposit of the nit or egg; for I have now in my possession several ears, in which there are many grains of smut and good grain intermingled; and also several ears in which the grains are part smut and part good farina—some about half and half, and some more or less of each.

It has been conjectured by several writers on this subject, that a radical change in the plant is effected by the operation of some latent poisonous principle, before the earing out. One writer (Duhamel) has stated he "found the ears smutted as early as March or April, upon carefully opening the hood, or blade, *even when not more than the sixth part of an inch in length!*" Another (Tillet) says, "the smutted heads or ears oftentimes be found *vitiated in the hood*," &c. Spallanzani "found (or supposed he found) that the smut was produced in the plants long before the impregnation." Whence Darwin concluded, "that for want of impregnation, or the vivifying principle, the wheat corn might putrify, as is the case with addled eggs," &c.

With a knowledge of the facts stated in my former numbers, it is impossible for me to believe that the grain could have been smutted by any "vitiating principle in the air," when the ear was not more than the sixth part of an inch in length, and still "in the hood;" or that smut was produced from "unseasonable cold and wet." For, in either case, I must suppose that a diseased state of the stem, or ear, would so operate upon all the sap vessels, as to produce a change in all the grains in the ear, or at least of the whole of each grain affected by the disease. That there is a constant circulation of the sap in plants while growing, some degree similar to the circulation of the blood in the animal creation, I presume no one will deny. Such being the case, it is difficult to imagine how one part of a grain can be good and the other bad, when the same sap is circulated and distributed to each section in precisely the same manner. I have little confidence in the statements of the discovery of smut at so early a stage in the growth of the plant—in the fine-spun theories respecting the cause of smut, I have none at all. My observations have convinced me that the change in the grain is produced after the earing, or "heading out," and while the germ of the grain is expanding. In cases where the grain is wholly smutted, I suppose the perforation to have been made at so early a period, that the germ being very small it is wholly affected and changed into smut. When the grain is only in part smutted, I suppose the nit to have been deposited at so late a period as to injure the part of the grain immediately around it; and that the other part of the grain being too much hardened to be operated upon, produces good farina or flour. As the bug is slow in its operations (and but one perhaps on an ear) it may be, and probably is, several days in perforating the grains in a single ear. In such cases, some of the grains perhaps are not perforated at all, and of course are not affected, while others in the same ear are entirely or in part smutted. Whether the bug, when it deposits the nit or egg, leaves with it some poisonous matter for its sustenance, which produces the change in grain, or whether the nit very soon becomes a worm, which nestles in the grain, and thus produces it, I do not know.

—

When I wrote those articles for the Argus, I had no very definite opinion as to the particular manner in which the smut was formed by the operations of the "bug" (or "beetle," as some fastidious learned people insist upon calling the insect). It will be perceived that in my third article I gave it as a supposition that "the bug, or its precedent worm, when revived by the warmth of the spring, commenced its work of destruction by attacking the roots of the young wheat." From subsequent examinations, I am convinced that that conjunctore was not well founded. I am now perfectly satisfied that the excoriations of the roots of the wheat were made by the "wire-worm," which has for the last twenty-five or thirty years destroyed so much of our wheat; but which has generally been supposed to have been "killed by the winter." That the ova, or larva, of the smut insect remains, during the winter, dormant in the smut grain, as an egg or worm, there can be no doubt. The unexpected result of carrying the smut grains into my wheat field with the barn-yard manure, as stated in my second article, appears to afford sufficient proof of this. As great numbers assume the insect form in the fall, they probably pass the winter in that state, and, like other insects, revive in the spring. However this may be, those which I hatched all died after a few weeks spent in feeding on the smutted grains contained in the bottle with them.

From all the investigations which I have been enabled to make, in relation to the manner in which the smut is produced by the operations of the insect, it is this: "It perforates the glume (chaff case) of the grain, and deposits its nit or egg. On the outside of the chaff case the puncture closes up (as do, generally, the lips of a punctured wound in flesh); but in the inside, the wound or puncture is kept open by the oozing in of the undigested sap of the plant, which runs into the unfilled cavity of the glume and fills it with smut, which is nothing more nor less than the crude or unprepared sap of the plant thus prematurely let in where good flour would have been formed if the sap had been left undisturbed, to pursue its ordinary course of preparation and circulation through the natural channels or sap vessels. And when one part only of the grain is smutted and the other part is good flour, it is, as suggested in my third article, because the perforation was made at so late a period that a portion of the cavity (less or more) had been already filled with properly prepared sap (flour), and but a part left unoccupied, but which was filled with undigested sap (smut) immediately after the puncture was made; both operations, that of forming good flour and the other of forming smut, no doubt going on at the same time; the latter, however, probably proceeding much the most rapidly.

Having, as I confidently believe, fully established the fact that smut in wheat is caused by the operations of an insect, and having discovered and identified that insect, I will proceed to consider as to the best means to be used as preventive remedies. And here I will confess that I have not any great degree of confidence that after the insect has been for several years an inhabitant of a farm, there is, or can be found, any certain and immediate preventive remedy for the evil, by the destruction of the insect, or otherwise. I have practiced several modes of preparing the seed wheat—at one time washing it with water; at another, soaking it in very strong lime water for twelve hours or more; in a third instance, wetting the wheat and mixing quick lime with it. Neither of these modes of preparation entirely prevented smut in the produce. The smut insect had become an established inhabitant in my farm, and I found it almost impossible to turn it out of the possession.

At length, however, I tried another plan. The heavy chaff and "tailings" of the cleanings of my wheat, containing the unbroken smut grains (with, of course, the nits or eggs of the insect in them), I carefully carried from the barn and destroyed them, so that none of the smut grains went into the manure. Particular care, also, was taken to sow no seed which had a grain of smut in it. This course was pursued for several successive years, and, after some twenty years of observations, experiments and exertions to free my wheat from smut, I succeeded in raising good and clean wheat generally, but not always—occasionally I have found my old enemy smutting my wheat again. It probably strayed over into my fields from some neighboring farm; for, since the wheat in this vicinity was first discovered to have become smutty, the evil has occurred, I believe, in some locality or other, every year, in a greater or less degree. Notwithstanding all my care and exertion to free my wheat from smut, I am not at all sure but that nature had as much to do with my success as I had myself. I believe it is generally understood that some seasons are not as favorable to the reproduction of insects as others. Cold and wet weather no doubt destroys many of the young insects after they are warmed into life. Severe winter frosts may also do the work by freezing and addling the eggs. It is also asserted (and I believe truly), that parasitical insects deposit their nits in other insects, which being hatched out, prey upon and destroy those that have thus served them for nests and food. Some one, or perhaps all of these causes combined, may have contributed to produce the desired result. Be this as it may, I am perfectly satisfied that the course which I pursued was the best, and indeed, the only one at all likely to be successful. If the smut grains are thrown into the barn-yard, and thence carried out upon the farm in the manure, I do not think it possible to free a farm from the smut insect. The insect appears to be brought to maturity at the time that the wheat is usually earing, or "heading" out, and the deposit of the nit, or egg, is commenced immediately thereafter. Early sown wheat generally fares the best; probably because of its heading out before the insect is ready to commence its operations. But if sown very early, for the purpose of having it ear or "head" out before the maturity of the smut insect, it is frequently attacked in the autumn by the Hessian fly; and thus, by attempting to escape one evil, we run into another oftentimes much worse; for the Hessian fly is generally far more destructive than the smut insect—the former frequently destroys the whole crop, the latter never destroys more than a minor portion of it. At the same time, however, *if the grain is cut before it becomes dead ripe*, it is very much injured by the grains being blackened by the dust of the smut as well as by having the unbroken smut grains mixed with it. Very late sown grain is very liable to be smutted if the insect is in the neighborhood of it. Wheat should, therefore, be sown neither very early nor very late. The best season for sowing it is, undoubtedly, between the 5th and 25th of September. Yet, as to its being smutted or not, much will depend upon the weather of the succeeding spring. If the season should be cold and late, it will probably retard the growth of even the early sown grain, and bring its latest growing heads within the period of time required by the insect for the deposit of its eggs.—J. H. H.

Cultivation of Peanuts.

The increasing commercial value of the peanut now renders it a subject worthy of attention, and we offer a few hints in regard to its cultivation. This nut is easily grown, and possesses, perhaps, more value than any production of our country, according to the labor necessary to produce it. Already the annual export of the article from Tennessee will not fall below twenty-five thousand dollars, and the demand is yearly increasing. It causes but little exhaustion of the soil, and properly managed, would be found to improve in place of exhaust.

The soil best adapted to the ground pea is a moderately rich loam, neither very heavy nor very light. A stiff soil will not admit the stems bearing the fruit to penetrate it with facility, and a sandy soil is too thirsty. Again, if the soil is too rich, the tendency of the plant is to run to vine instead of the formation of fruit. Any soil of the requisite texture, capable of producing five or six barrels of corn to the acre, is well adapted to the growth of the ground pea without the addition of any manure. But should manure be used at all, it should be used in small quantities. The ground is prepared by laying it off in rows three feet distant, and very slightly ridging, as in the culture of cotton. When manure is applied, it should, as in the case of cotton, be put in the drill. Throughout the entire cultivation, the chief objects should be to keep the ground clean of grass, and as level as possible. The slight ridge on which the seed are planted will be nearly or quite worked down by the first hoeing. As the vines extend over the surface, it is necessary to keep the ground well stirred with a trowel hoe plow, or other implement that does not turn it over. A couple of plowings and an occasional working with the hoe, is regarded as a sufficient amount of cultivation—less than what is required for cotton, and not exceeding that of the corn crop.

As soon as the vines are killed by frost the harvesting should commence. The first operation is to turn a coulter close to the vines, on each side, for the purpose of loosening the earth. The plants are then taken up with a hoe, and laid bottom upwards on the ground to dry. There they are to remain for several days, until they are cured—the time being shorter or longer according to the state of the weather. If it rains, it will do the crop no injury. When sufficiently cured the vines should be packed away in a barn, or under any good shelter, where the fruit may be picked at leisure.—[Tenn. Far. and Mechanic.

Value of an Agricultural Paper.—A gentleman in Kentucky, writing to the Tennessee Farmer and Mechanic, says: "One receipt I saw in your paper last summer, I think, was worth at least one year's subscription to me. It was how to prevent young trees from dying in hot, dry weather. My young orchard had begun to fail. Two of the trees had died, and the leaves were turning yellow on others and dropping off, and I knew not what to do for them. Your paper came to hand and brought the desired information. I went next day and dug around and watered and put straw around all the living trees. In a few days I saw all the yellow leaves had fallen off, and the trees all commenced growing and done finely without the loss of another one. I think if I had not done this, I should have lost the larger portion of my young trees."

"PLOW DEEP TO FIND THE GOLD."

The following song, says the editor of the Ohio Cultivator, we remember to have seen in an English journal some years since; but it is well adapted to this country at the present time.

Plow deep to find the gold, my boys!
Plow deep to find the gold!
The earth hath treasures in her breast
Unmeasured and untold.

Clothe the mountain top with trees,
The sides with waving grain;
Why bring over stormy seas
What here we may obtain?

Oh, Britain need not bring her bread
From countries new or old,
Would she but give the plowshare speed
And depth, to find the gold!

Earth is grateful to her sons
For all their care and toil,
Nothing yields such large returns
As drained and [illegible]d soil.

Science lends the kindly aid,
Her riches to us [illegible]
Moved by the plow [illegible] moved by spade,
Stir deep to find the gold.

Dig deep to find the gold, my boys!
Dig deep to find the gold!
The earth hath treasures in her breast,
Unmeasured and untold.

Educate your Boys, Farmers!

The following from the pen of Prof. Mapes, editor of the Working Farmer, is worthy being a leader in that valuable journal; and it should *lead* all farmers to *thinking* upon the important subject of which it speaks. It is the only thing that will make a successful working Farmer:

Education of Farmer's Boys, Laborers, &c.

Why is it that all classes of citizens, except farmers, consult their best interest by educating their assistants? Every city and almost every town in our country, has a Mechanic's Institute for the educating of apprentices during evenings, and most of the cities have Mercantile Library Associations for the improvement of merchant's clerks. Villages have Lyceums and Lectures, but do farmers attend them? Are not farmers negligent of education? As a general rule do they even send their own children to school but a small portion of the time? During spring, summer and autumn, thousands of farmers keep their children from school, and do not even provide books for their use in the evenings. Do farmers generally make the slightest exertion to assist in educating the children of the poor in their neighborhood? How often do we find traders in large cities who have all the attributes of success except education, and almost invariably they state that their fathers were farmers, and brought them up without the necessary education to assist them in the prosecution of any business.

We know that there are many noble exceptions to the above, and that here and there throughout the land, we may find instances of farmers who feel the liveliest pleasure in educating their children in the best manner, and the children in turn educate the workmen and their families. Many a family who now feel life almost a burden, after the toils of the day might be rendered happy by a social evening circle, where one might read for the benefit of the whole. Call in the children who are lolling listlessly about the fire, invite the workman, who would otherwise be around the fire of the kitchen or the tavern, and let the farmer, his wife, or the most intelligent of his children, read to the party for one hour every evening; it will soon become a pleasure in which all may participate. Select such books at first as will amuse, gradually change to the useful, and rest assured that all will be benefited by such practice. Recollect that one hour each evening for three years, is one thousand hours, and know that one thousand hours' judicious reading will educate any one in many of the useful arts and sciences. At any rate, one thousand hours so disposed of by a farmer and his family, would render every one of them capable of earning twice as much on the same farm as could be earned by any uneducated farmer, and the necessary books may be had for less money than would pay for the extra amount of nuts and cider consumed during one thousand hours of idleness by the same individuals.

Each hour so spent is worth six at an ordinary school, and thus may be made to represent a day's schooling. After the habit is once established and cheerfully continued, it is the privilege of the young to learn and not their task. Besides all those advantages, the constant habit of such evening meetings begets confidence and intimacy, and fathers and elder brothers would cease to be considered as petty tyrants by younger children; the whole moral tone would rise, and farmers would no longer complain of the difficulty of obtaining *good help*.

In a profession, calling for severe bodily exercise, a corresponding exercise of mind becomes necessary to insure good health—we do not mean mere animal health, for the bones and muscles are not the whole man, but he has a head and heart which follows nature's laws, and becomes inert if not exercised. What is there on an old style farm, with a regular routine of succession of crops, farmed and manured in the same way for the last half century, to exercise the man, or that part of him called brain? He follows the plow or the harrow listlessly, unless some new truth as *mind food* has been received the night before, and is being adapted to *brain analysis*. When he meets the evening circle again with the new thought digested, he can explain all, and find himself progressed by so doing; his moral state is elevated by elevating others, and all are improved.

How often do farmers direct their sons and helpers to do what perhaps is necessary, without ever giving their reasons for so doing, and thus neglecting to instruct others in what they understand themselves? Is this fair play? Should they place a son with a mechanic to learn a trade, would they not desire that he might be made to understand all the mysteries of his craft? And why not so with the art of farming? Many things are habitually done on every farm, the reasons for so doing which are seldom or never explained. Are there not many farmers who do not know why they plow? They certainly know that their crops are improved by plowing, but why? If the soil is once loosened, why does it not always remain loose? What has the admission of atmosphere to do with the growth of plants? Does it benefit them, and how? If aye, should not the subsoil receive the same benefit, and if so, by what means can it be disintegrated? If by the subsoil plow, should it be used in wet as well as in dry soil,

and if not in the former, why? Would underdrainage fit the subsoil so that subsoil plowing would benefit it, and why? After soils are once thoroughly disturbed by plowing before planting, should they be disturbed during the growing of row and hill crops, and why? Why are soils more productive when manured? Are all manures equally efficacious, and if not, why? Thousands of pertinent questions suggest themselves, every one of which, if fairly discussed at an evening circle, would outwork the latent energies of the minds of children and working men, adding the observations derived from practice to the registered truths of books, and thus chastening both into useful certainties.

Brother farmers, arise from your lethargy, and determine that every workman and child in your neighborhood shall at least be made acquainted with all the truths which have been printed in relation to Agriculture. We have tried it, and our greatest pride is now, to call the attention of visitors to a friend and gentleman on our farm, who had the germ within him awakened by such an evening circle, and who now has charge of our farm. He is not twenty-one years of age, and is capable of working any farm profitably. We do not use the word gentleman to represent either a wealthy, or scholastically educated puppy, but *a man* in the form of his Maker, whose moral code is beyond reproach, and whose self-procured education renders him capable of comprehending the mind-efforts of other men, and of observing Nature's laws understandingly. This always leads to gentleness and the ability of self-government, and a gentleman is the consequence. Aye, a gentleman farmer, be he rich or poor, be he principal or assistant, he is alike a gentleman, and all around him will feel the influence of his advancement. He alone will fail to observe himself as compared with others, except for the purpose of elevating them to his own plane. Would that every middle aged man in the community could realize to the fullest extent the value of such a gentleman, and would lend his aid to make all others like himself. We only require to comprehend such a character clearly, and at once we duplicate it. Who should be nature's gentlemen, if not the farmers? They own the greater portion of the wealth, and are numerically much the larger class. They stand between their Maker and the portion of creation requiring to be fed by them. What are the merchants, bankers, and other inhabitants of large cities, but the factors and agents of the farmers? They merely sell his produce, and import the products of other countries for his use. Cities really live by the smiles of the agricultural community, and nothing but the want of education prevents them from taking the relative rank their vocation and usefulness entitles them to enjoy.

Estimated Value of Sheep and Wool. The sheep of the British Isles are believed to number about 35,000,000; England alone possesses about 27,000,000; Scotland, according to the agricultural statistics of 1854, has 4,787,235; and Ireland, in 1853, had 3,142,656. Calculating the 35,000,000 as worth 30s. a head, the sheep stock of Britain is worth £52,000,000 sterling. The well being of these flocks is a point of national as well as of agricultural importance, for they not only materially enhance the fertility of the soil and afford a good return to the farmer, but also largely contribute to the feeding and clothing of our population. About 10,000,000 of sheep, weighing on an average 80 pounds each, are annually slaughtered for food. This furnishes 800,000,000 pounds of mutton, or on an average rather more than half a pound per day for each individual in the three kingdoms. The mutton at 6d. per pound is worth $20,000,000 sterling. Professor Low estimates that, allowing for the deficient weight of the wool of slaughtered sheep and lambs, each fleece averages 4½ pounds, and the total annual produce of wool will therefore be 157,500,000 pounds. Fixing the value at 1s. 3d. per pound, the total yearly value of the wool of Great Britain is nearly £10,000,000 sterling. A hundred years ago the flocks of Great Britain were about half as numerous as they are now.—[Essay by Finley Dun.

Farm Work.—It is a matter of great importance to the farmer, that he should lay out the work of the season beforehand. We need much more thorough system in our farming operations. Determine upon the fields you will cultivate, and what shall be allotted to oats, corn, rye, wheat, buckwheat, potatoes, and other root crops; what walls shall be reset, and what ditches shall be dug; and how much labor will be needed to accomplish the work. Leave nothing to be decided upon in haste. A great deal of time and mental labor will be saved, by making your plans deliberately at the beginning of the year. If there are doubtful matters, consult the best farmer in your neighborhood, and give his opinion due weight in your decision. A neighbor's experience will often save a useless expenditure of money and labor. When your plans are laid, carry them out, month by month, and week by week, until the year is completed. If you need capital for your legitimate business, hire it. You can as well afford to pay interest for this purpose as any other business man. Turn not aside to speculation in anything that you do not understand. Glory in the farm, and live by it.—[American Agriculturist.

Fine Stock.—Among the treasures which Mr. Troye, the artist, brought from his recent explorations in Oriental countries, is a veritable Arab mare. The animal was purchased for a stock importing company in Kentucky. She is a long, well-knit, shapely creature, of a grayish color, about the average size, with very large and muscular thighs, and a marvelous elasticity in every movement. Her value is estimated at $10,000. This is the second mare of the Desert which has been brought to the United States. The first, imported by this Kentucky company, came in by way of New Orleans. An Arab is extravagantly fond of such animals. He would almost as soon think of selling his own child as the fleet and patient beast which has been reared in his own tent, is his tireless companion in Desert journeys, and his most productive source of income. The best stock in the world came from Arabia, and the importation of original Arab mares to this country cannot fail to improve the American breed of horses.—[N. Y. paper.

To Toast Cheese.—Mix with three ounces of cheese, finely grated, four ounces of grated bread crumbs, two and a half ounces of butter, two eggs well beaten, a table-spoonful of cream, a table-spoonful of mustard, a little salt and pepper. Put it into a sauce pan and stir over the fire until heated, and then lay it thick on toasted bread. The cheese must be just browned in the oven after being put on the bread.

Arrangement of the Crystals of Cast Iron.

Robert Mallet, an Englishman, the author of a work published in London, on Artillery, affirms that in the "molecular aggregation of crystaline solids, the crystals always arrange and group themselves with their principal axes in lines perpendicular to the cooling or heating surfaces of the solid; that is, in the lines of direction of the heat wave." He assumes, that as a gun, in cooling, radiates heat from the center, outward in all directions, the particles arrange themselves in radial lines ready to be separated on the application of a comparatively slight force, thus possessing least strength in the direction where it is most wanted. He illustrates by the following experiment, which might be readily tried: "If a cylinder of lead, some four or five inches long, and of about the same diameter, be cast around a cylindrical bar of iron about an inch and a half in diameter, and considerably longer, the lead becoming rapidly consolidated by the contact of cold material interiorly as well as exteriorly, will have a tolerably homogenous structure, and may be cut into, beaten out, etc., without exhibiting any trace of crystalization. But if one of the ends of the central bar be heated red-hot, and time be allowed for the heat to be conducted along into the interior of the lead, and thence conducted outward in all directions till the heat is nearly up to the melting point of lead—say to about 550° Fahrenheit, and the lead be now sharply struck with a hammer, the whole mass will be found to have a crystaline structure, all the principal axes of the long thin crystals radiating regularly from the center; and by a few blows of the hammer the mass will separate and fall to pieces, so complete are the planes of separation."

As a consequence of this law, it is inferred that every abrupt change in the form of the exterior of any casting, is attended by an equally sudden change in the arrangement of the crystals, accompanied with one or more planes of weakness in the mass. The small cast-iron cylinder of the hydraulic press used in raising the tubes of the Britannia Bridge, failed under the immense pressure, until another form was substituted with a bottom more rounded; and the theory laid down, and to a certain extent established by this writer, would seem to indicate that when angular forms are absolutely required in castings exposed to great strains, it might be expedient to cast the parts in rounded forms, and then turn or plane them to the forms required—[Scientific American.

Science Increasing Longevity.—Doctor Buchanan, in a recent lecture before the Mechanics' Institute at Cincinnati, said that, in the latter part of the sixteenth century, one half of all who were born died under five years of age; the average longevity of the whole population was but eighteen years. In the seventeenth century one half the population died under twelve years. But in the first sixty years of the eighteenth century, one-half of the population lived over twenty-seven years. In the latter forty years, one-half exceeded thirty-two years of age. At the beginning of the present century, one-half exceeded forty years; and from 1838 to 1845 one-half exceeded forty-three. The average longevity at these successive periods has been increased from eighteen years in the sixteenth century up to 43.7 by the last reports. This increase in the duration of life has been caused by improved medical science, improvements in the construction of houses, drainage of streets and superior clothing.

Speed of Circular Saws.—A correspondent residing in Ralston, Pa., informs the Scientific American, that in a mill in that place, in which he is interested, there are two circular saws—one thirty inches in diameter, for sawing shingles, speed 1850 revolutions per minute; and the other 34 inches in diameter, for sawing studding. This latter saw was at first geared to run at the rate of 950 revolutions per minute, a speed which was recommended by several machinists. At this speed it was incapable of performing a fair day's work; it turned out only about one-third the work of the shingle machine. The size of its driving pulley was increased to give it a speed of 1200 revolutions per minute, and it now cuts with ease three times the quantity of lumber in the same space of time; "there is no loss of time now experienced in backing out the saw to allow it to recover itself." He is of opinion that the most ecomical speed to run large circular saws, is from 12,000 to 14,000 feet per minute at their teeth.

Important Improvement.—Experiments for the economical extraction of gold from its matrix have recently been conducted in London. It appears that the quartz is first calcined, and reduced to an impalpable powder, which is then placed in a glass retort immersed in a cistern of water, kept up to a boiling temperature; this is connected with glass tubes attached to a regenerator, in which the chlorine gas is produced by the decomposition of the black oxide of manganese, acted upon by hydro-chloric acid. This gas passing through and saturating every particle of dust, hitherto invisible, converts the same into a soluble chloride of gold. The sand is then well washed, the chloride consequently dissolved, and a stream of carburreted hydrogen being passed through the solution, precipitates the metallic gold in the form of a deep purple powder.

Chemical Minuteness.—On the recent trial of Dr. Palmer, in England, for poisoning Mr. Cook, and for which he has been executed, Dr. Herepath, the well known chemist, stated that the presence of strychnine could always be detected; and gave as an important proof that if he put 10 grains into 70,000 grains of water he could detect its presence in a tenth part of a grain of that water.

Trade of the Lakes.—During the past fifteen years the value of the trade of the lakes has swelled from $65,000,000 in 1841 to $608,310,320 in 1856; and the whole of this grand aggregate, with the exception of $42,260,000 set down for Sackett's Harbor, Cape Vincent, Oswegatchie, Genessee and Niagara, came through the following ports:

Buffalo,	$303,023,000	Milwaukee,	$35,000,000
Chicago,	223,898,000	Manmee,	94,107,000
Cleveland,	162,185,640	Sandusky,	59,965,000
Detroit,	140,000,000	Oswego,	147,385,000

Ground Oats for Horses.—Ground oats contain more of the nitrogenous or flesh making principle than any other kind of horse food that can be produced; at the same time they furnish a mixture of coarse and fine food—the husk of the first and the meal of the latter. The coarse serves to keep the bowels in a soluble condition, thus obviating the necessity for drastic medicine.

Desolate Home.

The charm of home depends upon the perfection of its circle; break the circle, and the charm is broken.

Death is a fearful visitor, no matter when or how he may come. His advent, even when his face is most thickly vailed, and footsteps most cautious, is terrible; but when he uses his power as if he loved to use it, and surrounds his mission with superfluous and peculiar horrors, then the heart-strings must snap and the blood curdle in the veins.

Many and many a time have we written for others what we are now writing for ourselves. For we can see how tame were our descriptions, how indifferent were our expressions of sympathy, how cold and passionless were our words. Forgive us, ye who have mourned and suffered, nor fear lest our future words and deeds shall not be fervent and tender.

Our darling has, indeed, departed. For the few hours that her little form remained with us, we felt that we had her still; but now we know that she is gone. It was a bright morning when we followed her to rest, but brought back with us darkness. The home which she shunned and made musical was as gloomy as a cavern, and so it remains. A few days ago it seemed like heaven, but now the stars have faded out, and the lark that sung at the gate has fallen with an arrow in its breast.

And when the night came on, how it brought a new measure—fully heaped—of lonely agony! How we sought to sleep, and were awakened by her blessed voice—her pattering footfalls—her thrilling touch! It did, indeed, seem as if she was there! But when we looked around and saw her not there, then the truth returned like a sudden blow, and we sank into the bitter waters.

She lies in her coffin. There are rosebuds in her hand, and a wreath of myrtle encircles her brow of alabaster. The leaves fall solemnly; the winds moan like a chained beast about her dismal bed. It is hard to leave her there, it seems so cold and dreary for the child! And yet we know it must be—and, because it must be, it is.

Yet why not talk what we know as well as what we feel? Our bird now sings amid the eternal branches; our bud now blooms in the garden of God; our darling reposes in the bosom of the Crucified. It is well. God loved the child, and loved her most when he took her up where Rachel's children are. We will eat this sweet morsel of consolation, and it shall strengthen us.—[Buffalo Express.

Arab Reflections.—The Arab Sheikh, his enthusiasm once cooled down, gave way to moral reflections. "Wonderful! wonderful! There is surely no God but God, and Mahomet is his Prophet," exclaimed he, after a long pause. "In the name of the Most High, tell me, O Bey, what you are going to do with those stones! So many thousands of purses spent upon such things! Can it be, as you say, that your people learn wisdom from them, or is it, as his reverence the Cadi declares, that they are to go to the palace of your queen, who, with the rest of the unbelievers, worships these idols? As for wisdom, these figures will not teach you to make any better knives, or or scissors, or chintzes; and it is in the making of those things that the English show their wisdom. But God is great! God is great! Here are stones which have been buried ever since the time of the holy Noah—peace be with him! Perhaps they were under ground before the deluge! I have lived on these lands for years. My father, and the father of my father, pitched their tents here before me; but they never heard of these figures. For twelve hundred years have the true believers (and, praise be to God! all true wisdom is with them alone) been settled in this country, and none of them ever heard of a palace under ground. Neither did they who went before them. But lo! here comes a Frank from many days' journey off, and he walks up to the very place, and he takes a stick (illustrating the description, at the same time, with the point of his spear), and makes a line here, and makes a line there. Here, says he, is the palace; there, says he, is the gate; and he shows us what has been all our lives beneath our feet, without our having known anything about it. Wonderful! wonderful! Is it by books, is it by magic, is it by your prophets, that you have learned these things? Speak, O Bey! tell me the secret of wisdom."—[Layard's Ninevah.

A Thought.—I remember that Adam Smith and Gibbon had told us that there would never again be a destruction of civilization by barbarians. The flood, they said, would no more return to cover the earth; and they seemed to reason jostly, for they compared the immense strength of the civilized part of the world with the weakness of that part which remained savage, and asked from whence were to come those Huns, and from whence were to come those Vandals who were to again destroy civilization? Alas! it did not occur to them that, in the very heart of great capitals—in the very neighborhood of splendid palaces, and churches, and theatres, and libraries, and museums—vice, and ignorance, and misery might produce a race of Huns fiercer than those who marched under Attila, and Vandals more bent on destruction than those who followed Genseric.—[Macaulay.

Beauty of Solitude.—Unthinking heads who have not learned to be alone, are in a prison to themselves, if they are not also to others; whereas, on the contrary, those whose thoughts are in a fair and hurry within, are sometimes fain to retire into company, must sometimes have bad company. Be able to be alone; lose not the advantage of solitude, and the society of thyself, nor be only content, but delight to be alone and single with Omnipotence. He who is thus prepared, the day is not uneasy, nor the night black unto him. Darkness may bound his eyes, not his imagination. In his bed he may lie, like Pompey and his sons, in all quarters of the earth; may speculate on the universe, and enjoy the whole world in the hermitage of himself.

Idle Visits.—The idle are a very heavy tax upon the industrious, when by frivolous visitations they rob them of their time. Such persons beg their daily happiness from door to door, as beggars their daily bread, and, like them, sometimes meet with a rebuff. A mere gossip ought not to wonder if we evince signs that we are tired of him, seeing that we are indebted for the honor of his visit solely to the circumstances of his being tired of himself. He sits at home until he has accumulated an insupportable load of *ennui*, and then sallies forth to distribute it among his acquaintances.

At Edinburgh, Scotland, Dr. Dionysius Wiclobyoke, a physician of considerable eminence, whose income from his profession was from $5000 to $6000 per annum, has been convicted of forging a will, and, notwithstanding evidence was introduced of former good character, was sentenced to fourteen years transportation.

HORTICULTURAL.

Commercial Nursery,
Three-Quarters of a Mile East of the City of San Jose.
THE Proprietors of this Nursery, having received the award of the
FIRST PREMIUM
OF THE
STATE SOCIETY
the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of
FRUIT AND ORNAMENTAL TREES,
For the Trade of 1856 *and* 1857,
that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.
Our Stock consists of
One Hundred Thousand Trees,
FROM FOUR TO ELEVEN FEET IN HIGHT,
Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;
TOGETHER WITH
Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.
Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.
Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.
Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.
Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.
Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.
All communications addressed to the subscribers will receive prompt attention.
v7-1 3m SMITH & WINCHELL.

Smith's Pomological Gardens
AND
NURSERY.
On the American River, 2½ miles from Sacramento.
THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of
Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants
to be found in any one establishment on the Pacific Coast.
Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.
FRUIT TREES—fine, vigorous, and in every variety of the following:
Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.
ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.
Among the fine Trees are the following varieties:
Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Allanthus, and China Trees.
Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.
We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.
ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.
Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.
GARDEN SEEDS.—1,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.
Catalogues furnished to applicants.
Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.
A. P. SMITH.

NOTICE.
We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.
Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.
J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.
v6-19 3m A. P. S.

San Jose Nursery.
THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of
FRUIT AND ORNAMENTAL TREES,
ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.
Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 60 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.
The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer
Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.
In each of the above the very best and most approved varieties.
The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—
Black and Honey Locust;
Chinese Allanthus, Catalpas.
—Also,—
20,000 Mulberry Trees,
All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.

ROSES! ROSES!! ROSES!!!
In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 96 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.
The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.
Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.
Address letters to L. PREVOST,
San Jose City.
San Jose City, Oct. 16, 1856, v6-13 4m

The French Garden,
Near the Cottage, on the Santa Clara Road.
A. DELMAS,.....Proprietor.

GRAPE VINES! GRAPE VINES!!
THE Proprietor of these extensive grounds would take pleasure in calling the attention of the public to the very great collection of Grape Vines, which he will offer the present season.
The Fruit from this Garden was exhibited at the late State Fair, and received the Diploma of the Society. The White Wine made from this Vineyard received the First Premium of the State Society. This Vineyard also obtained the First Premium for the Best Vineyard of Foreign Grapes, the present year.
The Proprietor will offer the present season his grand collection of Eighty One Varieties. Among this splendid assortment will be found—
Black Hamburg;
Chasselas of Fontainbleau;
Chasselas of Frontingnac;
Cannon Hall Muscat;
Muscat of Alexandria;
Charlesworth's Tokay;
Syrian; Black July;
Golden Chasselas;
Together with every variety of the Grape known and approved.
The undersigned is confident that this collection is the largest and most complete in the country, and to this the attention of the public is particularly invited.
The subscriber would also offer—
APPLE, PEAR, PLUM, PEACH, APRICOT, NECTARINE, and other Fruit Trees.
—Also,—
RASPBERRY, CURRANT AND GOOSEBERRY TREES,
In good assortment.
Catalogues of all the varieties grown in this Garden will be sent to all who desire them, by addressing letters to the proprietor.
All orders will be answered promptly, and Trees and Vines carefully packed for any place in the country.

Trees, Shrubs and Plants.
4,000 GRAFTED APPLE TREES, of every variety;
20,000 Los Angeles Grape Vines;
50 dozen Tulip Bulbs—Holland;
A general assortment of PLANTS.
Just received on consignment, and for sale by
W. HASELTINE,
Commission Agent, 131 Clay street.
N. B.—Consignments of Trees and Shrubbery are solicited and will receive strict attention. [v7-8 1m] W. H.

The California Farmer.

SAN FRANCISCO, FRIDAY, MARCH 27, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

Bring In your Grain.

We have refrained from giving views of the grain market for the last few weeks, from the fact that we had hoped the farmers would be wise and secure the rewards of their labor while the opportunity lasted. We again urge every farmer, every original holder of grain, to be wise now, be wise before the golden opportunity has passed; any reasonable mind must be fully convinced that *five cents* per pound for wheat is a fictitious price, and yet there are causes at work that may retain that price for a brief time, but we most sincerely hope the growers of grain will not be seduced into any error that will blight their own present and most happy prospects. *Sell now* should be the resolve of every grain grower; wisely, cautiously, yet openly act. Change your grain into real wealth, pay your obligations, and relieve yourselves from that blighting incubus, debt—thus improve your farms, make your homes comfortable, pleasant, luxurious, even, if your means will allow it; beautify that home, and educate your children. The most of our farmers can all do this now, for a kind Providence has smiled on them of late in an abundant harvest, and also a prospective one in in the future; but do not be ungrateful for these blessings, and become selfish and go beyond your true and legitimate business, and engage in speculation that shall forever blight your hopes.

We have some sorry facts of some farmers, who, forgetful of their own present good fortune, have become tainted with a love of gain and "make haste to be rich," by engaging in wild and mad speculations. We deeply regret this, and we warn them to wash their hands of this most unfortunate mania, and return to that happiest of all labors and duties the labors upon the farm. We are preparing some facts in regard to the present speculations which will startle farmers, if they are led to believe they are to receive any longer those enormous prices that are now beyond any market in the world. If they want proof of the *scarcity (?)* of breadstuff, let them go into the warehouses of San Francisco, and the delusion will vanish.

Hard Work and No Small Potatoes.

We cannot better illustrate the value of "hard work," and the good that will always result from it, than by sketching the steady results flowing from such labor. Nothing great is accomplished without great labor; and that which is worth doing at all is worth doing well. These maxims we saw fully illustrated at the farm of J. A. Hobart, Esq., at San Pablo, particularly in the crop of potatoes raised the past year. Mr. H. is fully convinced of the value of subsoil plowing and constant cultivation. We examined the soil, naturally a strong black clay or adobe material, such as is found in that region, which, without the proper understanding of its nature, will bake in dry weather hard as a brick. On this substance Mr. H. has applied his practice, and we learned from him that he subsoiled to the full extent of his plows, and then plowed freely, and repeated five times; thus completely pulverizing the soil to the depth of two feet. On this ground he has planted potatoes for five years, constantly plowing deeper and deeper, and enriching it with manure to repay the soil for what is taken off in the crop.

No soil could be in a more mellow or finer condition, and no crop which we have ever seen can surpass it. The crop of the past year, planted in July and harvested in January, yielded 200 sacks per acre, of 130 pounds per sack, or 27,000 pounds—thirteen and a half tons per acre, and giving the very pretty sum of $600 to $700 per acre. This is the result of a judicious and well directed labor.

We examined the balance of the potatoes now being sent to market, and they would average nearly one pound each—*no small potatoes*. We have never seen a finer lot of potatoes on the Pacific coast. From these facts we derive this moral—poor, shiftless farming, should be called "small taters," for such will always be the result of it; but wise and judicious farming will always secure an abundant crop of fully ripened fruit, as the reward of well directed labor.

The Dress does not Make the Man.

We very often feel indignant at the foolish remark of some workingmen, who, when called upon to come forward and take part in public meetings or in assemblies, where measures are in progress for the general welfare, express themselves as unfit to be seen, or do not dare to step forward because they are not *dressed fitly*—they may have their *working suit* on, or their old hat, or unpolished shoes, and these will sometimes prevent a *man* from performing his duty to himself and those around him.

We hope the day is not far distant when the workingman shall feel the true *dignity of labor*, and also feel that the sun-burnt cheek and brawny hand and working suit form a coat of arms richer than any patent of titled nobility; and that whenever or wherever called upon he will ever be prepared, as an intelligent freeman, to take part in all public meetings, when the good of the people requires his presence and action.

We too often hear the unkind remark, that all our public assemblies are ruled by professional men, to the exclusion of mechanics and others. When the mechanic and farmer shall feel the true responsibility that rests upon them, and educate themselves to take part in all the measures of public good, then they will act as true men and occupy their true place.

Fatal Accident.—Mr. James McCain, formerly from Pennsylvania, and whose family is living in that State, was killed on the 23d instant, at Butte Flat, near Rough and Ready, by the caving of a bank while engaged in mining.

A Pleasant Trip to a Pleasant Spot.

Seizing the first leisure moment we stepped on board the Oakland Ferry Boat and crossed to the fair City of Oaks, to take a stroll among the cultivated spots of this evergreen city.

Oakland is yet destined to be a most prosperous city, in spite of the retarding influence that has so long prevented her rise and progress. The unsettled condition of her land titles has been a blight upon her; it has been like a mildew, withering in its influences, as many a fair spot will testify; but we hope a better day is at hand. As time is precious to us, we were obliged to make short calls among our friends; but note a little at each.

Messrs. McDevitt & Ross, house painters, have not only been industrious mechanics, but they have a very neat garden, with a pretty greenhouse, where they improve every leisure moment from business to cultivate with taste and care many beautiful plants and vines. We saw much to admire at their garden. There were *two plants* of great promise in the collection, we especially noted—"industry" and "improvement." Among the various plants under cultivation we were pleased with a fine Tomato plant, a year old, from which the fruit had been gathered all winter, and now in fruit. The soil had been much improved by lime, soapsuds and ashes; these all served to destroy various insects that infested the soil and the plants. We were particularly pleased with the interest manifested by these young men for a County Agricultural Society—which could be formed at Oakland, and do a vast deal of good.

Messrs. Devitt & Ross' example of industry is worthy of imitation. We cannot help mentioning a pair of fine "mousers" we saw, of enormous size—pretty and gentle pusseys, weighing fifteen and fifteen and a quarter pounds each—the finest cats we ever say, worthy a special premium.

Our next call was at the Garden of John Smith, a nice well and cleanly cultivated piece of very fertile land of some fifteen acres, twelve acres of which were devoted to the Strawberry; varieties, British Queen (principally), some Black Prince and Chile. One acre was occupied with the Raspberry, of three varieties.

Next call at Messrs. White & Kelsey's, a very handsome spot of ground, of forty acres, and a piece of land rarely equaled. Messrs. W. & K. have three acres in Strawberries, four acres in Raspberries, a large piece in Currants, and a fine fruit-tree plantation. It will be recollected by many who visited the San Francisco markets the past year, that fine Raspberries and Currants were for sale at the stall of Mrs. Weaver. They were raised at these grounds, and were as fine as could be raised. To show the value of one acre of Raspberries, we can give the following items: the produce sold of one acre was 2500 pounds, equal to $1000, and the sale of plants from the same ground $2000, making $3000 from an acre of ground in one season—THIS IS WELL.

We called on Capt. Reed, who cultivates thirteen acres, and cultivates it well. He has a new house, good improvements, fine fields of early potatoes, onions, &c.

We visited Mr. Bogge, where we saw the finest lot of early Peas and Beans we have seen this season. Grounds in good order, well cultivated, free from weeds, good fences, fine neat cottage, happy home—these are the indices of thrift and give good promise of the future.

We found an old friend next, at the place of Capt. Jas. Daly, and saw with surprise and pleas ure how much could be done in the short space of two years, by a sea captain. Here were evidences of good navigation; the ship was in good trim, sailing with a fair wind, full sail, studding-sails set, and making good headway. We could not but admire the very handsome grounds so tastefully laid out and improved by our friend—really, a little paradise. We can commend our friend, now that his "life on the ocean wave" is over, that he should take so much pleasure in his happy home retreat; it is very much to his credit, the display here of taste and order.

Capt. I. F. Schander, another of Neptune's sons, here claims a pleasant and very tasteful "home on shore." About two acres of fruit trees and two acres of flowers and ornamented grounds make one of the pretty and tasteful homes that add so much to the value of our glorious State.

Mr. Marshall Curtis, a dairyman, gave us matters of interest and excited in us feelings of respect and reverence for his untiring industry and his perseverance against reverses. Mr. Curtis, we learn, *walked from Chicago to Sacramento*, and arrived here, like many others, poor. By his industry after he became settled here, he secured a homestead, and step by step with hard labor stocked his farm with cows, horses, &c., and had accumulated a little, when fire consumed his barn, stock, &c., thus almost destroying him by a loss of several thousands; but a generous feeling among his neighbors, with their kind aid, cheered him, and he moved on again; when his son, a sprightly lad, was kicked by one of the animals, and his leg completely shattered, making him a suffering child, and cause of anxiety, care and expense for many months. But with courage and energy, Mr. C. worked on, and again by his labor, aided by the increase of his dairy stock, butter, milk, and the help of an excellent 'better half," who was amply capable by her skill in the dairy department, to superintend, our friends have now some dozen fine cows, and make 125 pounds of butter a month; have yoke of working oxen, horses, barns, and a comfortable home. These are ever the fruits of industry and should be encouraged and protected. The great drawback now all over our State, is the great misfortune arising from the unsettled titles to land, which have and will prevent thousands and tens of thousands of beautiful and happy homes that would otherwise spring up all over our land.

Our last visit of the day was at the garden of Mr. Fountain. These grounds are upon a pleasant elevation, commanding a fine view of mountain scenery, and from the observatory of the house a fine view of the whole country round. Mr. Fountain has one of the best pieces of garden ground we have seen—a deep rich sandy loam, and we were pleased to see he had *abandoned the useless* system of irrigation so long and hurtfully practiced by gardeners. His windmills were idle, their "wings were clipped," and in their stead, *deep cultivation*, thorough subsoil plowing, constant and fine cultivation, had not only done more than irrigation, but saved large sums of money and fatiguing labor.

We noticed at Mr. Fountain's a collection of eighty fruit trees very handsomely and carefully formed, showing the proprietor understood his business. Strawberry and other fruits were growing finely. We noticed a fine patch of early Peas and Beans, of new kinds, and other evidences of improvement that gave us pleasure to note. This visit closed our first day's roaming among the Cultivators of the City of the Oaks, and in our calls we were in all the places named most kindly and courteously entertained, for which we tender our sincere thanks. And here we cannot omit to return our very kindest thanks to our friend Kelsey, of the firm of White & Kelsey, who very kindly joined us in our ride and made our trip much more pleasant, by the information given on the route.

We should also mention that among all the Cultivators on our route we found a very strong desire experienced that there should be a County Agricultural and Mechanical Society formed here, for the purpose of a general exchange of experience; nothing could be done that would tend more to encourage and stimulate such enterprises and we hope it will be accomplished, and that forthwith.

We would suggest to our friends on the Oakland side, that they call a public meeting and take measures to have a Society established immediately.

Farming at San Pablo.

We spent a little time the present week very pleasantly, and with much profit to our mind, among the farmers along the San Pablo road. We know of no section of our State where greater and more rapid improvements have been made than in this vicinity. It was some eighteen months since we had last visited this part of the State, and the marked advance in the systems of cultivation was most gratifying.

An entire change has taken place in the manner of plowing, planting and cultivating their grounds—that best of all systems—subsoil plowing, which is beginning to be appreciated, and generally practiced, and the benefits are very apparent. Early sowing, too, is found to be a better way; and irrigation has been supplanted by that better system of constant cultivation. Another very prominent feature of success is shown in the character of the implements now used by the farmers. The word is now: "none but the very best and strongest implements are used among all intellegent and provident farmers."

Among the many places we visited we must briefly note the following:

J. A. Hobart, Esq., of whom we noted the last year as having heavy crops of grain and also squashes, has this year changed his crops, and has now principally vegetables and fruits. Mr. H. cultivates only seventy-five acres the present year—no grain; but he is giving more care and attention to the seventy-five acres than was given to 175 last year, and his crops, we venture to say, will be more than double. He is also distinguished as a grower of hops and horse radish. Mr. Hobart has thoroughly tested the value of deep plowing and constant cultivation. We were shown potato plantations where the land had been subsoil-plowed and afterwards plowed and cross-plowed four times, and the present appearance of the crop gave all the evidence needed that such labor was true economy—(we refer to another column for proof of such labor). We were much pleased with the entire grounds thus wisely cared for, and spent a pleasant and profitable hour, receiving kind entertainment and refreshment at the hands of Mr. H. and lady.

Mr. Fred. Coggshall cultivates some 150 acres. We saw a patch of fifty acres potatoes, planted January 1, that promise exceedingly well. Already fine young new potatoes, the size of an English walnut are found. Another piece of eighteen acres was planted last December, and was cut down by the frost; but sprouted anew, and bid fair for a good crop yet. We also noticed a field of volunteer barley of eighteen acres, the heaviest we have seen. It was from eighteen to twenty-four inches high. In all we saw of the grounds of Mr. C. we were well pleased, for they bore the assuring mark of good cultivation.

The farms of Mr. G. Hinton and his brothers, around him, are in excellent order, with fine fields of early potatoes and other market crops.

A call at the nice cottage home of Mr. G. W. Parsons, was a source of much pleasure. Here we also found the true reward of industry and frugality—a comfortable, happy home; broad acres of luxuriant growing crops. Here we saw some twenty acres early potatoes, six acres onions, ten acres beans, all in the highest state of cultivation.

Mr. Jas. B. Coggshall's, Mr. N. J. Bennett's, the garden of F. J. Smith, that of Mr. Tubbs, and many others at which we called for a moment at close of day, we saw such evident marks of rapid progress in the science of agriculture as to afford us extreme satisfaction.

We can speak but briefly of the magnificence and commanding view of our splendid bay which we enjoyed at the residence of Mr. Tubbs. We do not believe a more beautiful location or prospect can be had on the Pacific coast, and we have no language to express our admiration of it. We could not repress some feelings of envy at our friend for monopolizing the very beauty spot of this glorious bay. Mr. Tubbs' residence is on a gentle slope of the most luxuriant land, directly opposite the Golden Gate (on the Oakland side), commanding a perfect view of the whole harbor, the steamers, as they wend their way up and down the bay, the shipping, and indeed all the sea and land for an hundred miles. Here in his beautiful home he is indeed lord of the soil he cultivates. The view on all sides landward, is as rich and lovely as nature could make it. On this ranch we found the very highest state of cultivation.

We called at the garden of Mr. E. Judson, where we found a happy old gentleman tilling the soil, and pleased with his daily labor and toil, and we could not but feel a reverence for such industry, which we trust will be richly rewarded.

The tasteful, and well cultivated garden, and pleasant home of E. L. Boardman, Esq., a merchant of Oakland, was another evidence of true taste, by beautifying home. We saw here some of the finest moss roses and other gems of Flora, we have seen on the Oakland side.

Mr. Lusk, formerly of Sacramento, whose splendid brooms at the State Fair of '55 won admiration both here and at the East, is now determined by his attention to the cultivation of strawberries, of which he has a splendid patch of eighteen acres, to *sweep* all competitors away. However, there is room enough for all.

Mr. G. C. Aldrich's farm, that we visited, we found in most excellent order; fine well plowed fields, where large crops of potatoes, onions and other crops were doing well, and gave assurance of labor being well rewarded.

To Mr. Goodrich we are under very great obligations for his kindness in joining us in a visit to many of the pleasant places we have named; and here we would suggest to all our brother farmers that they would greatly benefit each other if they would be more neighborly, if each and all would occasionally spend a day or two in calling upon one another and exchange views, see each other at work, and unite in their little plans in which all are interested, the good done would be incalculable. Come, farmers, try and be more neighborly; take a day, and ride and see how your neighbor plows and plants, and how his crop looks, and tell him how you get along yourself—both will be the gainers. These are essential means for general prosperity, and we hope they will be carried out.

We return our sincere thanks to each and all the friends on whom we called, for their readiness to join in the measures of progress which have been suggested, and for their courtesies to ourself. We hope to make our journal, to which they so readily subscribe, a medium of much benefit and pleasure to them.

City of Oakland.—During a visit to the Contra Costa side we had an opportunity of examining the fertility of the soil and the general features of this very beautiful spot.

It is a matter of astonishment to strangers that there are not more improvements in and around a city so favored by nature; but this can be easily explained by referring to the troubles in relation to the *titles* of the city, and to all the surrounding farms and gardens—a great portion of which comes under the claims of the "Peralta" or "Castro" grants. It is most unfortunate for all classes that some decision cannot be had, as it prevents all improvements, and hinders that success to many branches of business which always follows the prosperity of the cultivators of the soil.

The "Public Squares" of Oakland are destined to become very valuable to the city as well as highly ornamental, when they are improved; nature has been lavish in her bounty, and if the citizens would but unite and join art with nature and embellish these public squares, they could be made the most beautiful in the State, and their improvement would add to the value of all the real estate in the vicinity. We sincerely hope a County Agricultural Society will be formed in Oakland, and that their first act will be to improve the public promenades of this lovely city.

Two Thousand Inhabitants in one House.

We were very much interested by a visit to Mr. Joseph Smith's strongly re-inforced garrison, on the San Pablo, and it is the most densely inhabited place we have met with on this coast. Mr. Smith is a Rabbit fancier, and raises more of this delicate food than any other person probably in California, and it is very interesting to go through his extensive and curious building.

Mr. S. has now in this building about sixteen hundred rabbits, of all sizes, colors, and ages; some very beautiful animals—black, white, gray, fawn and spotted, and we noted some as large as fifteen pounds. We were kindly shown all his plans of breeding these gentle animals, and the curious and maternal care taken by the parents is indeed wonderful. Those who take a ride on the very pleasant San Pablo road, will be pleased with a call there.

Mr. Smith has also some three or four hundred domestic fowls, of the Cochin-China breed, the largest and finest animals that can be found; they are great layers, better far than those numerous fancy breeds that have excited so much furor. Persons wanting valuable domestic fowls, will do well to obtain from this stock, if they can.

Increase of Egyptian Wheat.—Some two years since we had a few heads of Egyptian Wheat for distribution and we scattered it freely. Mr. A. Staples, of Oakland, had one head for trial, and from that was produced *three pints of clean seed*. The past year that seed was planted and the produce was a full grain bag of seed of the best quality, and this is to be planted the present year, and we anticipate a very heavy crop, and a full account of the same.

[For the California Farmer.]

Sheep Raising.

Editors Farmer: I was much gratified to notice, in your very able and valuable weekly, the statistics of the late sale of Sheep imported from New South Wales, by D. Gibb & Co., and the highly interesting letter of C. C. C., on Sheep and Wool Growing. During a tour through the interior I had an opportunity of observing the capabilities of this State for sheep raising, and after many years experience in that well known wool producing country, Australia, I am fain to confess that she has a formidable rival in this continent—than which, none other possesses greater natural advantages. Her undulating, fertile, well-watered plains afford a range for pasturage unequaled, and that, too, at a comparatively trifling expense; inasmuch as, from the nature of the localities, one shepherd can take charge of three thousand sheep without danger of loss. The fecundity of the climate is also an important item; my observations on this head, I observe, are corroborated by the results attending the importation of those enterprising pioneers, the Messrs. Whitney. I noted also in the flocks of the Messrs. Fairchild, on Stockton plains, that the fiber was of increased length, which to the manufacturer is of primary importance; the fleece, also, was weightier. The facilities in this State, for the depasturing, breeding, washing and shearing, are so evident to the sheep grower, and the transit of the clip to the home market so ready and inexpensive, that this pursuit must become the leading business of the country; and I take it that the time is not far distant when we shall see the whole route from Texas hither one vast sheep-walk. No occupation is more profitable, under judicious management, and certainly it is most congenial, whether to the man who looks only to the pecuniary gain, or to the man of mind and enterprise who rejoices in the welfare of his country, and in the delightfully peaceful enjoyment of the pastoral life.

I trust that the shearing of the imported sheep, together with their increase, of the Messrs. Whitney, may be made, as you with admirable taste suggest, an epoch worthy of commemoration in the history of California; as this event in her career will doubtless be the nucleus whence will arise an article of *export far higher in value than all her metals, and capable of being perpetuated throughout all her existence.*

Should you desire, it would afford me pleasure to give you such information and statistics on the general management of Sheep, as may prove beneficial to the tyro. H. S.

Most happy are we to receive the above Communication from our friend H. S., and shall be glad at all times to have from him all the light we can. We feel deeply on this subject, believing, as we do, the future is very bright for California in her vast resources.

Important Sale of Real Estate.—There were several features of interest manifest at the late sale of real estate of the late late W. D. M. Howard, that demand more than a mere passing notice. The sale gave evidence of a positive advance in value—the purchasers being persons who *bought to improve*, not for speculation; and in the majority of cases for immediate improvement too, thus giving a stimulus to the mechanic interest. But there was another feature that we look upon as of the highest moment to the city of San Francisco—portions of the money that was paid to the executors was absolutely *mouldy*, having been hidden or buried for safe keeping, since the bank explosions of 1855; and now brought forth and invested safely. This tells for the good of all.

Heavy Rains.—We were on the beautiful hillsides of Oakland as the rain fell in torrents last night and this morning. Daylight revealed nature clad in her living green; the grass and early grain were hung with diamond drops, ready to gleam as the sun should catch them and send its nourishing heat to strengthen the root, so that in due season it should send forth the golden heads of waving grain to gladden the hearts of the harvesters. Birds at morn sent forth their orisons for the genial showers, and the smiles we met upon the face of every farmer told of his high hopes for the coming season. Nothing could be more propitious, and no prospect more gladdening than that of the Lord of the Soil, for the year 1857.

Hutching's California Magazine for April is before us, containing an interesting sketch of the Pacific Whale Fishery, illustrated with a number of sprightly engravings; an article on the timber-worm of California, also well illustrated; a truthful engraving of the San Francisco Sugar Refinery, with a good description of this important auxiliary to the comfort of the homes on the shores of the Pacific, and many articles suited for instruction and pleasure. This ably conducted Magazine needs only a perusal to make it an indispensable necessity to every Californian who loves a real luxury at a price within the reach of all. For a monthly present to the old and young folks in the Atlantic States, who feel interested in their friends and relatives in California, nothing could be more acceptable.

Home Manufactures.—We acknowledge the receipt of the Pictorial Wide West, from the publishers, W. W. Kurtz & Co. This fine specimen of the skill and genius of our State, is a very desirable production, and an appropriate gift to send to friends in the older States, containing as it does all the gems of their previous unsurpassed pictorials, and presenting so truthfully the pursuits and resources of our State.

Snow.—Between Humboldt Bay and Trinity river, on South Fork and Redwood Mountains, at last accounts, the snow was three feet deep.

DEEDS THAT ARE DEATHLESS—*How Time Reverses Human Judgment.*—Time tests the value of all human action, and deeds that were thought glorious at the period of their enactment wear a different hue when looked back upon, apart from the false surroundings of immediate victory. It is but a few years, comparatively, since we were assured that the battle of Waterloo had settled the condition of Europe upon a permanent and imperishable basis; the "era of revolutions," Lord Castlereagh declared to have gone by forever: and yet the Europe of to day is practically ignorant of any results from the greatest of Wellington's achievements, and even the British Queen finds it prudent to forget in the Nephew's alliance, the implacable hostility with which her gouty Grandfather pursued the Uncle.

These deeds of warriors and statesmen so much vaunted about in their day, are of little significance when the true history of the world comes to be written. Fulton and Watt, and Morse, and Holloway—Jennings, the inventor of vaccinnation, and Arkwright, patentee of spinning-jennies—it is to the lives of these, the future historian must turn when he endeavors to account for the vast physical and mental progress which characterized the first half of the Nineteenth Century. He must consult the life of Holloway in particular; for no where else can he find so perfect a type of that combination of activity and erudition which forms the distinctive development of our modern intellect. The wise and learned of former ages were omnipotent in the academy, but helpless as newborn babes in the rough conflict with the world; they confined the treasures of their genius to some half score or two of credulous disciples; but for the great masses of the people—the *profanum vulgus*, as they call them—they cherished a profound contempt and hatred.

What a pleasing contrast to this exclusive folly does the course of professor Holloway afford! How much wiser, as the event has proved, was as to treat mankind with confidence, and rather seek to elevate them to his own intellectual and scientific platform, than to look down upon them from an envied and unapproachable hight! He has now made friends of the world—of all races, creeds and tongues of man; he is looked upon by millions from all corners of the earth as the physical redeemer who has disenthralled them, by his universal remedies, from the bondage of disease. The world has not a language in which the broad principles of his pathology have not been enunciated; nor has the earth a race of human beings so utterly barbarian as to be ungrateful for the benefits his philanthropy has brought home to them. Indeed, ingratitude is by no means a barbarian vice. We find more of it among the polished circles of society than amid the natural rudeness of a savage camp. We could, at this very moment, lay our hands upon hundreds who owe their very *lives* to the use of Holloway's Pills and Ointment; and yet, because they think it "more the thing" to have a "family physician," you could not offer them a worse insult than an intimation of who it is that really has cured them!

In the redemption of humanity from the pangs of physical anguish, by Holloway—in the telegraphic annihilation of distance, by Morse—in the labor-saving machinery of Arkwright, and the independence we enjoy over wind and tide, through the dauntless exertions of Fulton—the future historian of our race will find the deathless deeds which are to claim the tribute of his pen, and will exclaim, as he records the mighty miracles which they performed—"Ah, there were giants in those days! we ne'er shall look upon their like again."—[N. Y. Examiner.

A CALIFORNIA PEAR.—Rev. Dr. Bushnell, who returned from California, recently, has brought home a pear of enormous size, which was grown in California the past season. It is of the old eastern "Pound Pear" sort, and grew on an ingrafted tree in the garden of E. L. Beard, Esq., Mission of San José, California. Its weight, when picked, was 3 pounds 7 ounces. It is eight inches long, and measures 20 inches in circumference one way, and 15 inches the other. It may be seen in the window of Geer and Hurlburt's bookstore.—[Hartford Times.

MARYSVILLE LIBRARY ASSOCIATION.—E. Gould Buffum, Esq., of the Alta, has received an invitation from the Library Association of Marysville, to deliver his lecture on "Types, Ink and Paper." He has accepted the invitation, and will give the lecture on Tuesday evening, the 7th of April. We congratulate our Marysville friends on the opportunity of listening to this very interesting address, which has been received with so much favor both here and in Sacramento.

HAY PRESS.—Mr. Isaac Hiett, of San Joaquin county, has exhibited at the office of the Secretary of State, Sacramento, a model of a traveling hay press, which is to be sent on to Washington to be patented. The invention, the Union states, is an extremely simple one—a box on wheels, in which the hay is pressed as it moves along, and the bales turned out in perfect order with great rapidity.

From the East.

The Nicaragua steamer Sierra Nevada, Capt. Huntingdon, arrived here this morning (Saturday, 28th), from Panama and San Juan del Sur, bringing 375 passengers, with dates from New York to the 25th of February.

THE NEW ADMINISTRATION.—The Cabinet question is finally settled, at least the most important part of it. General Cass has received a formal tender of the State Department, and has accepted it. Mr. Cobb has received a similar offer of the Treasury Department. It is generally understood that John B. Floyd, of Va.; A. V. Brown, of Tenn.; and Jacob Thomson, of Miss., will be in the new administration.

CALIFORNIA MATTERS IN CONGRESS.—The House had passed a bill refunding duties on goods burnt in New York (in unbroken packages), in the year 1845, but has rejected an amendment offered by Mr. Denver, applying the sum of $500,000 for similar purposes in San Francisco.

The Herald says Senator Gwin will offer an amendment to the Atlantic Telegraph Bill providing that the line be extended to San Francisco, at a price to be agreed on between the contractors and the Secretary of State, not exceeding $50,000 per annum.

The petition from California for the expulsion of Mr. Herbert has been laid on the table.

The Senate have voted to extend the boundaries of Oregon eastward from the Pacific, so as to give it a length from the sea of nearly a thousand miles.

The bill for the admission of Oregon is still pending in the Senate, as also the Sandwich Island Treaty.

SPECIAL NOTICES.

☞ **FLAX SEED.**—We have just received several cases of very superior Flax Seed, from the East. It is of very superior quality; and there is no doubt but it can be grown here more successfully than in any other State in the Union. We really hope many will be induced to try this most valuable article. We are ready to furnish all who would like to try it as an experiment, with small parcels, *free*, if they will try it carefully. Those making it a business can be supplied in large quantities.
WARREN & CO.,
v7-10 130 Washington street, San Francisco.

☞ **TO STOCK RAISERS.**—We earnestly invite stock raisers of all kinds to advise with us and give us information in regard to such stock as they may have for sale, and all the particulars of price, quality, &c. We are often inquired of relative to such matters, and can always find purchasers for almost all kinds of extra stock. Valuable stock will always sell; and we intend to keep a register of all such stock as may be in market, and assist in finding purchasers for it, and to do everything in our power to further the breeding of good stock.
v7-10 WARREN & CO.

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

BOOKS FOR GARDENERS.

JUST received, at the office of the FARMER, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

☞ **CHRISTMAS GIFT.**—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.
BY MRS. E. W. WIRT, OF VIRGINIA.

For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.
WARREN & CO.,
State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

☞ **READ—Copies of the Farmer for Mailing.**
That all may have an opportunity of sending the FARMER to their friends in the East, so as to make known the resources of California, we have
Reduced the price to Twelve and a-half Cents per Copy.
It will hereafter be found at the following places:

J. W. SULLIVAN, ULLMAN & CO., } Post Office Arcade.
NOISY CARRIER'S, Long Wharf
HUTCHINGS & ROSENFIELD, Montgomery street.
BOOK STORE, corner of Clay street and the Plaza.

At these places can also be found copies of the State Society's Reports. Price 50 cents.

The FARMER will also be had ready for mailing at all times at the office, at $1 50 per dozen; also single copies.
WARREN & CO., Editors and Proprietors.

"Always in Advance."

THOSE who are desirous of having our journal will please remember the TERMS are—always in advance. We often have letters directing us to send the FARMER and a bill; in looking over the letter we do not find that "Five-spot," and knowing the parties to be good and honorable men, we send the paper. It then *sometimes* occurs that forgetfulness, or convenience, or a removal, or perhaps a visit to the States, causes our claim to be overlooked, and the small sum of five dollars, is lost to us. Now we wish to be as kind and obliging as we possibly can; our labors and duties are many and arduous, and we do hope our friends will think of this five dollars—it is but a small sum itself, but the aggregate of many fives creates means that would materially advance the cause of all interested.

When a subscriber's term is out, we do not wish to stop the paper abruptly, and we therefore inclose a bill with the next number, and wait sufficient time for him to signify his wish. If we are not requested to stop the paper, and he continues to receive it, we consider it equal to renewal and look for a remittance, and we ask our friends to inform us promptly in this matter. Either return the paper as a notice of non-renewal, or kindly remit us, and thus aid us in a work we believe worthy support.

A CARD.

☞ THE Report of the Agricultural Society, for the year 1856, including the full Reports of the Visiting Committees to the Farms and Vineyards throughout the State, Reports on the Exhibition, the Annual Address of the President, Address of Col. J. B. Crockett, detailed list of the Exhibited Articles, the Prize Essay on the Potato, with other important matter, is now issued in a neat Pamphlet of about eighty pages, illustrated. Persons desirous of obtaining copies will please address the Office of the CALIFORNIA FARMER, when copies will be forwarded as per order. Price Fifty Cents.

For sale at the Offices of the CALIFORNIA FARMER, State Agricultural Society's Rooms, Sacramento—and at No. 130 Washington street, San Francisco. Also, at Ullman & Co's. J. W. Sullivan's, J. J. LeCount's, San Francisco; Dr J. C. Cobb, and J. B. Manny, San Jose.

Splendid Merino Rams and Ewes.

ANY person wishing a few very superior Merino Rams and Ewes can be supplied if they call for them immediately. WARREN & CO.,

MISCELLANEOUS.

Pacific Mail Steamship Company's Line
TO PANAMA,
CONNECTING
VIA PANAMA RAILROAD
WITH THE STEAMERS OF THE
UNITED STATES MAIL STEAMSHIP COMPANY.
AT ASPINWALL.
For New York and New Orleans Direct.

Departure from Vallejo street Wharf.

THE MAGNIFICENT STEAMSHIP
JOHN L. STEPHENS,
R. H. PEARSON, Commander.
Will leave Vallejo street Wharf, with the United States Mails, Passengers and Treasure, for PANAMA,
On MONDAY, - - - - - - - - APRIL 6th,
At 12 M, punctually.

Passengers by this Line are landed on their arrival at Panama upon the Wharf of the Railroad Terminus, by the Company's Steam Ferry Boat, and proceed immediately by
Railroad Across the Isthmus to Aspinwall,

Where the steamers of the U. S. M. Steamship Company are always in readiness to convey them to New York or New Orleans. Passengers for New Orleans proceed by steamer from Aspinwall.

THROUGH TICKETS
Are furnished, including the transit of the Isthmus.

Passengers are notified that the tickets for the steamers of the U. S. Mail Steamship Company must be presented to their Agent at Aspinwall for registry and exchange, as they will not otherwise be available.

☞ Treasure for shipment will be received on board the steamer until 12 o'clock midnight, Saturday, April 4th.

No Merchandise freight will be received on board after 3 P.M., April 4th, and a written order must be procured at the Company's Office for its shipment.

For freight or passage, apply to
FORBES & BABCOCK, Agents,
Corner of Sacramento and Leidesdorff streets.

☞ A Choice of Berths on the Atlantic Steamers is secured by the early purchase of Tickets in San Francisco. v7-1

Spermatorrhea can be Cured!

THE GREAT RUSSIAN REMEDY!

THIS unparalleled specific for the above fearful complaint, recommended by the Medical Societies of Berlin, Paris and Vienna, and by Dr. Andrew Ure, of London, has recently been imported by the agent of Johannesburgh & Co., the manufacturers, and is now for sale in San Francisco. A cure is guaranteed in from three to fifteen days, even when paralysis has taken place.

Address Box 14, San Francisco Post Office, inclosing $10, when sufficient will be sent for a perfect cure; and the harrowed mind of the almost lunatic victim of passion put to rest. We have also half packages at $5—they will be put up carefully and sent per express, free from detection.
JOHANNESBURGH & CO.,

Sale of the Superior Shorthorn Herd
OF THE LATE
NOEL J. BECAR.

To the Editors of the California Farmer:

DEAR SIRS: I wish to communicate through your columns, to the Breeders of Shorthorns, that I have been authorized, by the executors of the late Noel J. Becar, to dispose of his entire herd of far famed Shorthorns. We have also determined not to sell a single animal from that herd until JUNE, 1857, on the day of my annual sale, which generally takes place about the 20th.

Many inquiries have been made by letter, and otherwise, and I take this course to answer previous and future questions. A very full and explanatory Catalogue will be issued in due time, and very generally circulated to all my present correspondents, and as many others as may desire it.
L. G. MORRIS.

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? Not He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance* is *practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for oursel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promotes habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensuratively increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve! whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Section's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,345 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

NORTHERN ASSURANCE COMPANY,
For Fire and Life Assurance at Home and Abroad.
Established in 1836—Incorporated by Act of Parliament.
Capital £1,250,760 Sterling.

Annual premium for an assurance of $100 on a single life:

APOSTROPHE TO SPRING.

[With most sincere pleasure we present to our readers the promised communication from the gifted pen of "Serena," mentioned in our last issue. We feel sure our readers will be as happy as ourselves to learn that they will often be greeted from the same source. The present "Ode to Spring," is alike noble and beautiful, breathing the very spirit of poetry, and comes freshly gemmed with the voice of nature:]

Hail, lovely Spring! Enchanting Goddess, hail!
Thy breath inspires us with a newer life!
Thy smile unseals a mystic fount of joy,
That gushes upward in a hymn of praise!

Lo! at thy coming, Winter flees away!
His jeweled crown falls from his hoary front!
His glittering scepter trembles in his grasp!
His cheerless reign is o'er—and he retreats,
With lamentation loud, to Northern climes,
To dwell a season in eternal snows!

Thou walkest forth in beauty, gentle Spring,
And Beauty answers, as the soul to soul,
The invocation of thy presence fair;
Her long imprisoned spirit finds a voice
In chiming waters, musical as song,
And caroling of birds, afloat in air,—
Her liberated sentiments on wing—
The ideal soaring to its own bright goal!

The trees and shrubs unloose their fragrant buds,
And fling aroma round thy forest paths;
The vales and meads array themselves in bloom,
Charming the honey-bee from flower to flower,
While genial suns light with a brighter smile
The fairy scene.

Hail, renovating Spring!
In all thy changing forms we love thee still!
Each little patch of grass about our way,
Thy well-known footprint, to the heart is dear,
For we live o'er our youth awhile we gaze—
The gala hours of life when our free souls,
Inebriate with joy, reveled in song
Until the distant hills heard, and gave back
In quick response, the music glad and wild!

O earth! the winter of thy age is past!
In thy renewed existence thou wilt be
More perfect than before—'t is Heaven's decree!
Eternal progress is the law divine—
The law that governs systems vast of worlds
Circling, unwearied, the void immense!
'T is the melodious anthem of the spheres!
The stars of morning, at their early birth,
Caught up its holy strains, in chorus grand,
To fill the measure of all coming time,
And charm dull night, o'en Death himself, at last!
Angelic hosts, in hights unreached of thought,
Swell that rich tide of harmony divine.
O, blissful harmony! on which the soul
Floats back to the Eternal whence it sprang.

Each atom, ever, in continuous change,
Obeys the perfect, universal law,
And man may learn from thence the thrilling truth
That he is heir to an immortal life:
For, if inanimate creation lives,
In o'er perfecting forms, shall not man, too?
The latest, best, of the Creator's works—
Made in the form and likeness of his God—
Inspired with life from its unfailing source?
He will! through Heaven's immeasurable years!

We hail thee, Spring, the harbinger of hope,
Bright emblem of a life beyond the grave.

San Leandro, March 3, 1857. SERENA.

FRIENDSHIP'S OFFERING.

[The annexed beautiful and affectionate tribute of friendship from Hortense to Laura will revive in the heart of many a kindly reader those happy hours they have passed within the walls of the convent, or the various seminaries of learning, where their best and happiest years have been spent, and where those ties of early friendship were formed, which in after years rise up in pleasant memories, or become the harbingers of a renewal of those pledges, and result in a more valued and enduring affection, and prove priceless in value. Our fair "Hortense" will always be welcome to our columns, and she will know her memory is dearly treasured by her friend and truthfully reciprocated; and while life lasts, though two oceans may divide the material forms of loving friends, in spirit they are one, and in affection unchangeable.]

HORTENSE TO LAURA.

Within these convent walls a stranger came,
Of gentle, fragile form—Laura her name;
She joined our wild and school-girls' romping throng,
And charms our uncurbed thoughts by gift of song:
But oft I watch the tear that dims her eye,
And see her turn aside, to heave a sigh;
Alas! she 's left her home—her mother dear—
To rest afar—no friendly voice to hear;
No kind and gentle hand to press her brow,
She lingers in the midst of strangers now.

Weep not, fair mourner, for thy peaceful home;
Let not thy saddened thoughts forever roam
To scenes thou 'st left—one lingers in this band,
That oft thy pale and mournful face hath scanned,
And read the sorrow of thy aching heart,
Which of thy gentle nature seems a part,
And pined, her arms around thy neck to fling,
Bidding thee weep no more—no more to cling
Unto those sad remembrances so dear;
But dry thy sorrowing tears—a friend is near.

Yes; one flings friendship true upon thy shrine,
But wilt thou accept such worthless love as mine?
Wilt thou return my loving kiss at night?
When thoughts of home "come o'er thee like a blight,"
Then turn to me—when in thy saddened hour;
Thou 'lt find that friendship hath a soothing power.
I 'll cheer thy drooping heart—cast grief away!
Can I do this, thou anguished mourner, say?
Can I remember Laura in my prayer,
And ask the angels to remove each care?

March 9, 1856.

My Wife's Economy.

Mrs. Jones is a jewel of a woman. The dear creature lately came home from a shopping excursion, in the most extravagant spirits.

"I have made such a bargain to-day!" said she. I have bought such a beautiful dress for thirty shillings only! So I said to myself, even if I get Madame Flourish to make it up, it will be economical."

Now, Madame Flourish was a French *modiste* who had lately come from Paris, and had really great taste, but was most extravagant in her charges; and I never heard her name without a shudder. A few months before, she made up a brocade for Mrs. Jones, which everybody said fitted beautifully. "It looks as if you were born in it," enthusiastically declared a friend, "and had grown with you;" but my pleasure in contemplating this master-piece, I must confess, was somewhat diminished when the bill came in, to the tune of two pounds, for making and trimming it. However "it wasn't so astonishing after all," as my wife reasoned, "that a dress which was worth six pounds should cost two pounds to make it up," and with this reflection I consoled myself. So, when I heard the proposal to take this other dress to madame, I argued, that, if she charged in the same preportion, her bill would be only ten shillings, which struck me as not excessive; and accordingly I made no objection to the suggestion, but lighting a cigar, sat thinking of Mary Ann's many virtues, and especially her knack for economy.

In about a fortnight the dress came home. It was a pretty, blue affair, with palms set in stripes, and Mrs. Jones really looked like a summer cloud in it, as she floated about the room, displaying it in every aspect, and expatiating upon its merits. The sleeves, which were short, were neatly trimmed with a sort of narrow lace; and the cape, for it was cut low on the shoulders—and dear Mary Ann always wears capes over such dresses—was embellished with a wider lace of similar pattern. I thought to myself it was the cheapest dress for two pounds, making and all, that I had ever seen; and as I smoked my cigar, said mentally, "Ah! Jones, what a happy dog you are to have a wife with such a knack for economy!"

Two days after the bill came in. My wife opened it first, and I saw her draw a very long face as she ran her eye over it. However, she rallied immediately, and handed the missive to me. I glanced over it.

"Whew!" said I. "Twenty-five shillings for making a dress that cost only thirty! Surely, Mary Ann, there must be some mistake here?"

"Oh! no, my dear," she said, briskly. "My brocade, you know, cost two pounds to make and trim; and this is fifteen shillings cheaper."

"But this dress cost only thirty shillings," said I.

"The cost of the dress, my dear," she replied, smiling benevolently at my ignorance, "has very little to do with the cost of making and trimming it."

"The dickens it hasn't!" I began.

"Hush!" said my wife, playfully putting her hand over my mouth. "Smithy, dear, you mustn't swear." And taking the bill, she commenced going over it, item by item.

"Here," she said, "is the charge for making the dress, that is, for fitting and sewing it together, eight shillings. Now I'm sure," she continued, appealingly, "that's reasonable; for it takes just as long, you know, to fit and sew together a cheap dress as a costly one! it's the time that has to be paid for. Don't you see, dear?"

I was forced to nod assent to the fair logician, though it was with an internal groan.

"Then here 's the linings, buttons, and other small items, five shillings, which is low, very low. Consider how these matters count up. Besides, it takes time to go about among the shops, matching the buttons to the dress."

I could not gainsay this either, but I said to myself that there were twelve shillings still unaccounted for, and that it would "puzzle a Philadelphia lawyer" to reconcile this sum to any rational being's notion of economy.

"There's twelve shillings left," resumed Mrs. Jones, "which is for the Valenciennes——"

"The what?" I exclaimed.

"The Valenciennes, with which cape and sleeves are trimmed."

"Oh! that common-looking lace!" said I.

"Common-looking!" cried Mary Ann, her eyes sparkling. Then she laughed comically. "That shows what you men know about laces. Why, Smithy, dear, it's real Valenciennes, and very cheap; and what's more, I can use it on something else, after the dress is worn out."

"But why put real Valenciennes, as you call it, on so cheap a dress?" I asked, in a tone of vexation.

"It's that very Valenciennes that gives the dress such a stylish look," said my wife. Everybody knows it's a cheap material; and it 's only the trimming that redeems it. All that I require is a Valenciennes collar to match it, and I shall be complete."

I could not speak for amazement. I was dumb, not merely at this strange notion of an economical dress, but at the utter unconsciousness my wife had that there was anything extravagant about it. She availed herself of my silence to expatiate on the beauty of Valenciennes laces in general, and on that which trimmed her dress in particular; and, warming with her subject, made it finally to appear that we were under infinite obligations to Madame Flourish for the opportunity of paying this bill and buying a collar to match her Valenciennes. Mrs. Jones was so earnest and sincere, that I thought it would be a pity to break her charming delusion. I resolved, therefore, to smoke second-rate cigars for the next six months, and indulge the dear creature in her wishes; and she looks so lovely, and seems so happy, in her new dress and collar, that, to confess the truth, I don't regret what I have done.

Nevertheless, as an abstract proposition, I still hold to the secret opinion, that paying twenty-five shillings for making and trimming a dress that cost only thirty, doesn't exactly show a knack for economy.

Smith Jones.

A Heroine of the Sea.—Among the passengers who arrived at New York lately, on the steamer George Law, Capt. Joshua P. Patten, late of the ship Neptune's Car, and his wife, Mrs. Mary A. Patten, are mentioned by the Eastern papers. It will be remembered that Captain Patten, while on the voyage from New York to San Francisco, was taken sick with brain fever, and that his wife, who had been his companion during a previous voyage round the world—assumed the command of the vessel, and took it into San Francisco, arriving but a few days behind some vessels which started in her company, and ahead of others, with the cargo in excellent condition. This heroic conduct of a young wife has received the high award of praise which is its just due. The difficulties which she had to encounter were increased by the fact that the first mate was found by Captain Patten to be unfit for the position, and had been deposed. She also had to act as nurse and physician for her sick husband, and despite her exertions, his disease settled into a congestion of the brain, accompanied by delirium and blindness. The rough sailors all obeyed the "little woman," as they called her, and despite the unmanly conduct of the first mate, the ship arrived safe at San Francisco.

Mr. and Mrs. Patten were sent home by the Masons of San Francisco, and arrived in New York in destitute circumstances, the husband still sick, and expected to survive but a short time. The Board of Underwriters of that city, however, immediately on the case coming to their knowledge, awarded Mrs. Patten the sum of $1000 as a temporary relief, and it is understood that some further appropriation will be made for their relief, and that the owners of the ship and the merchants of New York propose to take some further notice of the case.

Mrs. Patten is a native of East Boston, is but twenty years of age, and has been married four years.

TRAVELING.

California Steam Navigation Company.

ARRANGEMENT FOR MARCH 1st, 1857.

Departure from Jackson street wharf, at 4 o'clock, P. M.

CARRYING UNITED STATES MAIL.

Steamer NEW WORLD, Capt. Samuel Seymour;
" ANTELOPE, Capt. E. A. Poole;
" CONFIDENCE,
" WILSON G. HUNT,
" HELEN HENSLEY, Capt. E. C. M. Chadwick;
" J. BRAGDON, Capt. Thos. Seeley;
" URILDA, Capt. E. Z. Clark;
" CORNELIA, Capt. E. Conklin.

One of the above steamers will leave Jackson street Wharf every day at 4 o'clock P. M., (Sundays excepted,) for

Sacramento and Stockton,

Connecting with the light draft steamers for

Marysville, Colusa, and Red Bluffs,

For further particulars inquire at the Office of the Company corner of Jackson and Front streets.

SAM. J. HENSLEY, President.

PROSPECTUS

OF

VOLUME VII.

OF THE

CALIFORNIA FARMER.

THE CALIFORNIA FARMER was established in January, 1854; its success was a problem that the future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the virgin soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer Farmer expected to meet with obstructions, trials and difficulties, that would try our strength and temper too. But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he must meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—so our humble selves in the enterprise of the journal we then presented, we had faith—we were willing and ready to labor and toil—to do and to suffer—confident that ere long the goodness of the cause we had espoused, its happy and beneficial influences, with dignity, nobility, and prosperity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good—to them we and our cause are known—our desert at their hands is manifest

To those who are strangers to us and the journal we publish, we again present the California Farmer.

Our journal is devoted to Agriculture and all the useful sciences—it will ever be our aim to have the Farmer the true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the true friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Homes of our glorious State. Free from every political, sectarian, or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that our means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication, we have access to facilities for information rarely obtained.

In the department of Education, of Home Influences, we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artisans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall esteem most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it in comparison, and abide the issue.

With grateful acknowledgments for a generous sustaining in years of trial, and with the assurance to our patrons of many improvements in the opening year, we ask their continued favor and generous influence for this journal

The terms of the Farmer are, for the year (always in advance), $5.

Offices of Publication—130 Washington street, San Francisco, and State Society's Rooms, Fourth street, Sacramento. WARREN & CO., Editors and Publishers.

The Most Successful and the Best.

NOW COMPLETE AND FOR SALE,

SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.

By Epes Sargent, author of "Standard Speaker," &c.

The following are nearly ready:
Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

Sargent's Standard Speller contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

Rural Publications.

THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages Two Dollars per annum. "Without question the best Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."

THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.

THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.

SPECIMEN NUMBERS

Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to

The Mathematical Works of Professor Davies are too well known to require special notice. They are the text-books (in connection with those of Professors Church and Bartlett) of the United States Military Academy at West Point, and nearly all the colleges in the United States. The elementary Course of Mathematics, consisting of the revised editions of Arithmetics, Algebra, Geometries, &c., and recommended by the superintendents of public instruction of Michigan, Illinois, Missouri, Wisconsin, Minnesota and North Carolina, and are used in the best schools and academies throughout the United States. Clark's English Grammar, Willard's School Histories, Parker's School Philosophy, Fulton and Eastman's Book-keeping, and Monteith's and McNally's School Geographies are also the favorite books in each of the above named States, as well as in all parts of the country where they are used. v7-4 2m

Important New Works,

JUST PUBLISHED BY

D. APPLETON & CO.,

346 and 348 Broadway, New York.

I.

THE HILLS OF THE SHATEMUC. By the author of "The Wide, Wide World." 1 vol., 12mo., cloth, $1 25.

The popularity of this work bids fair to more than equal the former work by this talented author.

II.

COMMODORE PERRY'S JAPAN EXPEDITION—Executed at the command of the American Government Written out from the Journals of the Commodore and his Officers. By Francis L. Hawks, D D. 1 volume, 8vo., with upwards of 200 Engravings. Price in cloth $5 00; ½mo., $6 00; full calf, $7 00; full morocco, $8 00.

This book, containing as it does, the record of one of the most brilliant National Expeditions ever undertaken, and illustrated by such varied illustrations, will become a standard volume for libraries. It is as interesting as a novel.

III.

A MEMORIAL VOLUME TO BISHOP WAINWRIGHT. Containing Thirty-six Sermons and a Memoir, by the Bishop of New Jersey. 1 volume, 8vo., with Portrait. Price $2 50.

IV.

MEMORIALS OF HIS TIME. By Lord Cockburne. 1 vol., 12mo. $1 25.

This volume presents to the reader a most graphic description of Society as it existed in Edinburgh towards the close of the last century.

V.

FRUIT TREES! FRUIT TREES!!

Oak Grove Nursery, Alameda.

THE subscriber, whose stock consists of the finest varieties of FRUIT TREES, imported from the Nurseries of HOVEY & CO., Boston, and now from one to four years old, many in bearing the present year, consisting of—

Dwarf Pears	20 varieties.
Plum	12 "
Apricot Plum	6 "
Foreign Figs (now in fruit)	7 "

All the best varieties of Apple, Peach, Nectarine, &c.

3,000 Los Angeles Grape Vines, now in fruit, three years old.

Strawberry Plants, &c.

Persons wishing to furnish their grounds will do well to visit the above Nursery and select for themselves, bearing in mind that to insure the healthy growth of a tree, it should be transplanted in the fall.

For particulars inquire of S. L. PALMER & CO., agents, corner of Washington and Davis streets, San Francisco, or to

v6-10 3m GEO. B. COOK, Proprietor.

MEDICINES, &c.

SANDS' SARSAPARILLA,

FOR PURIFYING THE BLOOD,

AND FOR THE CURE OF

Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts powerfully upon the STOMACH, the CIRCULATION, and the BOWELS, and thus three processes, which are ordinarily the result of three different kinds of medicine, are carried on at the same time through the instrumentality of THIS ONE remedial agent. Its great merit is, that it meets and NEUTRALIZES the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.

LYNN COUNTY, Oregon Ter., March 11, 1855.

MESSRS. A. B. & D. SANDS, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the knee, which day by day grew worse, until his legs contracted, and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 3d of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could do us no more him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse, but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were reduced, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swelling in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and filled up. He is now perfectly recovered, has no appearance of having a cripple, and can perform most kinds of common labor, as our neighbors will certify.

Yours, respectfully,

CALEB DAVIS.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

ROMAN EYE BALSAM,

FOR INFLAMED EYE-LIDS.

The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes inflamed, the inner membrane rapidly inflames, and the eye-lid presents the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.

READ THE FOLLOWING EVIDENCE.

NEW YORK, July 15, 1856.

MESSRS. A. B. & D. SANDS: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your ROMAN EYE BALSAM, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years.

Yours, &c.,

G. H. WILLIAMS, 262 BROADWAY.

PRICE, 25 CENTS PER JAR.

The Farmer's Drill.

[PATENTED, AUGUST, 1853.]

THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct. 28th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.

Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.

This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.

MEDICINES, &c.

J. L. POLHEMUS
DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh,
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

PACIFIC MUSEUM,

Corner of Clay and Kearny streets.

INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!

THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Wolf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.

Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montes.

☞ A full Brass Band is in attendance every evening. Open every day and evening (Sundays excepted).

. Admission 25 cents during the Day, and 50 cents in the Evening. v7-2

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,
SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

v6-14 R. H. VANCE.

To the Farmers.

THE subscriber would respectfully announce to the Farmers of California that he has now on hand and for sale, on the most reasonable terms, a good assortment of Agricultural Implements suitable to the wants of the farmer at this season of the year, amongst which is an IRON GANG PLOW with Steel Mould and Shear;

Knives and Sections for Reapers;
Horse Rakes; Hay Rakes; three and four tine Hay Forks, &c, &c.

For sale as low as can be purchased elsewhere in the city. v7-10 3m

From the South.

THE CROPS.—For so far, we have heard very favorable accounts of the state of the crops throughout the county. A great breadth of barley has been sown; of wheat, in some sections considerable has been put in, rancheros coming to the conclusion that it is better to produce their own breadstuff, than to pay the high rates which so long have ruled for flour. The grass is short, and even the best pasture ranges stand greatly in need of refreshing showers. A total failure of the hay crop is considered by some inevitable. Irrigation can but partially supply the much needed moisture. Rain, rain, is the great want of the country.—[Los Angles Star, 21st inst.

GRAPE CROP.—The vines having been carefully pruned and dressed, the work on a vineyard consists in cleaning up and plowing, preparatory to letting on the water. In a few instances irrigation has commenced. The vines look very healthy and flourishing generally. They are fully in bud, and in some locations are putting forth leaves.

On the 19th of January, almonds commenced to blossom; apricots, on the 23d of January; the latter will soon be in market. The bloom of the peach, apple and pear, is nearly over, the fruit beginning to form in many instances. Foreign apples are just beginning to show leaves. Twenty-five hundred orange trees have been set out this last year near Los Angeles.

The careful gardener has his hands full of work at this season, in getting out his beds and plants, attending to his hedge rows, in digging, hoeing, irrigating, etc. Altogether, the products of the garden, as well of the field, are in good condition, and, with a good rain, the latter would be insured against all chances of a short crop or failure.—[Ib.

The Mechanics' Institute, a society designed for intellectual improvement, by means of debates, lectures, and other literary pursuits, is well attended, and in a flourishing condition.—[Ib.

The weather during the week past has been warm and pleasant. A hard earthquake shock was felt in this city and Montecito valley, about 3 o'clock, on the morning of the 14th inst. It was of momentary duration. Vegetation is growing vigorously. Further showers of rain would be most desirable dispensations in this county.—[Santa Barbara Gazette.

NEW ROAD.—The Road Committee left San Diego on the 11th inst., says the Herald, to locate the new road to the Desert. Even if they find no pass nearer than the one they have gone to examine, which is known to be feasible, it will cut off over forty miles of the distance from San Diego to the Colorado.

Mrs. Eliza A., the wife of Judge Ames, editor of the San Diego Herald, died in that city on the 14th instant.

AN ILL WIND.—The 11th and 12th of March, says the Herald, were the hottest days we ever experienced in San Diego. About 11 o'clock, on Wednesday morning, while the weather was quite mild and the atmosphere still, there suddenly sprung up a hot breeze from the direction of the Colorado Desert, which in less than twenty minutes increased to a gale—withering and scorching every shrub and blade of grass in its course. The wild Malvas and a new green grass which in the morning were so fresh to look upon, in three short hours were as withered and yellow as the leaves of the forest in autumn. The hill sides which at early dawn were covered with verdure and beautiful wild flowers, when the shadows of night hovered over the landscape, presented nothing but a withered waste.

RESERVOIR BURSTED.—The reservoir of the Union Water Company, at St. Louis, bursted on Monday, destroying some ten thousand dollars' worth of property.

OROVILLE.—The Record says: "Several drays have recently made their appearance in our streets, giving to the steamboat landing and the town a cityfied appearance. If some enterprising person will introduce a cab in Oroville, we will make a bigger blow over it than the Marysville papers have over Frank Wilson's."

MINING GROUND.—A writer in the Trinity Journal, says after speaking of the Ridgeville mines: "I may say, in conclusion, that there is a vast tract, (forty-eight miles in length,) of mineral land lying between Trinity River and the Salmon, which will afford work to thirty thousand people for many years to come."

MINING IN LOWER TRINITY.—The miners in the vicinity of Lower Trinity have an abundance of water, and are, as a general thing, doing well. Near Cedar Flat, claims are paying from $10 to $25 per day to the man. Diggings are now proved to be rich, which four years ago were thought to be exhausted. Provisions are plenty.

MORE GOLD DISCOVERIES.—The express rider from Kern river brought intelligence to Los Angeles of a discovery of extensive quartz and placer gold mines on White river. Immediately on the discovery being made known, a rush was made from Keysville and other locations on Kern River, some of the villages having been entirely deserted. The quartz is said to be very rich. Four "arastras" were already at work, and with the most flattering success.

MINING NEWS.—At Greaser Town, the tunnel claims are yielding over eight dollars a day to each man. At Washington Flat, in Mariposa county, the average of companies of six men is from $70 to $250 per day. At Little York, Nevada county, new diggings have been discovered, from which it was thought that more gold would be taken than ever before. At Gold Hill, in the same county, one company took out $1800 in one week, and another $1300 in five days. Near Oroville $400 were taken out of two pans of pulverized quartz, on Tuesday. In the vicinity of Forbestown, rich quartz leads are being discovered almost daily.

A HORSE STORY.—The State Journal says that an accident, singular in its results, occurred during the passage of the cars down from Folsom, on Wednesday last. As the train approached Patterson's, a valuable mare, heavy with foal, attempted to cross the track a short distance in front of the advancing cars, and was overtaken, run over, and instantly killed, the flesh being torn completely off one side. The train was stopped, and it was ascertained that no damage had occurred to anything except the unlucky mare. At the suggestion of a gentleman present, to see if the condition of the animal was known, the "Cesarian operation" was performed, and the colt, with little difficulty taken from the side of the mare. The informant, who, the Journal says, is perfectly reliable, saw the colt yesterday, in the possession of Mr. John Waters, to whom the mother belonged at the time of the accident. The little creature is quite lively, eats well, and bids fair to make a 2:40 nag, having commenced life most certainly, in a fast manner, born by steam, and before its time.

CONTRA COSTA—COUNTY AGRICULTURAL MEETING.—The farmers, gardeners, and the mechanics of Contra Costa are alive to improvement, and are making efforts to arouse sufficient interest to organize a County Agricultural and Mechanical Institute for the county. This is an excellent move, and we trust all our readers and true friends of industry in this enterprising county will take hold of the work in earnest. A great good could be accomplished by such an organization.

MORE VALUABLE STOCK FOR CALIFORNIA.—We record with pleasure that a lot of very superior stock will arrive by next steamer, imported by George H. Howard, Esq., at great expense. While we go against the importation of product from the East, that competes against our own industry, those who import stock to benefit the State, as in this instance, are real benefactors.

THE TEHUANTEPEC ROUTE.—The Solano Herald says that on Tuesday evening last a number of gentlemen, residents of Benicia, met at the residence of Judge Hastings, in that city, for the purpose of hearing read a "Memoir of the Inter-Oceanic Communication between the Pacific and Atlantic," by Capt. Cram, of the Topographical Corps of the Pacific. It was a very able document and well written, and will undoubtedly be published by order of Congress, as it has been sent to Washington. The routes treated of were the Panama, Nicaragua or San Juan del Sur, Honduras, and Tehuantepec, giving the distances and number of days it would take to travel from the Pacific to the Atlantic side. The captain showed very conclusively that the Tehuantepec route was the shortest, and, when it was opened, the passage could be made from San Francisco to New York in eleven days.

HOLLOWAY'S PILLS AND OINTMENT.—Why is it that Professor Holloway has been presented to most of the potentates of Europe? Because the public is not deceived in the intrinsic worth of these medicines. Almost any case of Asthma, or Cold on the Chest, is cured by rubbing in plenty of Ointment and using the Pills. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box or pot.

☞ NEWSPAPER ROUTE FOR SALE.—We can offer a good Route for the city of San Francisco, and one for Sacramento, to one who has the taste for making known our journal. A very profitable route can be thus secured to active and experienced men

Benicia High School.

THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by CORNELIUS J. FLATT, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17TH of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS: PER MONTH

Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.

No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.

For further information or references, address the Principal.

TREADWELL & CO.,
Corner California and Battery streets, San Francisco.

N. B.—Any of the above named articles can be had at our branch store at Marysville. v7-9 tf

New Cultivator.

THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measures operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who wish finely cultivated soil it has no equal.

Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.

All persons are invited to call at the workshop and examine it.

R. BEECHING, Manufacturer,
v7-5 3m 35 Pine street, San Francisco.

The Great Stump Puller.

WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.

It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.

It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.

The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.

Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!

It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO.

Hydraulic Hose and Pipes.

A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. Globe Pattern Rubber Stocks, with and without Steel Rings. The whole coupling together in the most thorough workman-like manner complete for use placing in the hands of miners the most valuable gold washing apparatus ever yet introduced into the mining regions, and one which is destined to do more for the development of our mountain treasures, than all others yet introduced.

DIOSCOREA BATATAS, New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by

J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

CHINESE SUGAR CANE, OR, SORGHO SUCRE. PURE SEED.

THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 30 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,

W. P. ORME, Atlanta, Georgia.

ATLANTA, November 7, 1856. v6-22

SEEDS.

HOVEY & CO.,
DEALERS IN SEEDS,
No. 7 Merchant's Row, Boston, Mass,

ARE now receiving their new and fresh stock, embracing all the best and most desirable varieties of Agricultural, Garden and Flower Seeds, grown expressly for them by the most experienced cultivators. Purchasers who wish to obtain the most reliable Seeds are requested to forward their orders early.

Seeds packed securely for California or any other part of the country.

Also, from their own Nurseries, a very extensive collection of Fruit and Ornamental Trees and Shrubs, Grape Vines, Strawberries, Gooseberries, Roses, Greenhouse Plants, &c., embracing the best varieties in every department.

Catalogues sent gratis on application.

☞ Remittances must accompany orders. v6-19

NEW SEEDS.

A FEW Rare Seeds from France—
THE LEONARDI CAULIFLOWER,
The best in the world!
French Riddish Seeds, of extra varieties;
Broom Corn, Cotton, Tobacco and Morus Multicaulis Seeds.
For sale at the Rooms of the State Ag. Society,
v6-19 tf Fourth street, Sacramento.

Garden Seeds.

THOSE who desire Garden Seeds of an extra quality, of any kind, can be furnished at the lowest rates by an order to us, with remittances for the amount desired, to which order will be added a handsome collection of New and Rare Seeds from the Patent Office, with full Reports of Agriculture and Mechanic Arts, *free of charge*, accompanying every order.

Orders sent to our Office at San Francisco or Sacramento will be promptly attended to. v6-24

The Great Giant Rhubard.

THE mighty Giant Rhubarb, of Wisconsin, will be offered on the arrival of the next steamer. Those who desire Roots of the same had better leave orders early.

For sale at the Rooms of the State Ag. Society,
v6-19 tf Fourth street, Sacramento.

Seed Rice.

A SMALL lot of new MANILA CADDY RICE, of recent importation, which is the most desirable kind for seed here, being a favorite Rice with the Chinamen. Persons in want of seed will do well to attend to it soon, as this is the only lot in market, or will be for the season, and, unless called for soon, it will be hulled and put into market in the shape of Rice.

WAITE & BATTLES,
v5-21 1m 154 Front street, San Francisco.

Seed of the Great Tree.

A FEW packets of the Seed of this famous Tree are for sale at the State Society's Rooms, on Fourth street, Office of the CALIFORNIA FARMER. v5-13

Shell Mound Nurseries AND FRUIT GARDENS,

Near Brooklyn, Alameda county, directly opposite San Francisco.

THIS well known establishment is now prepared to offer to its patrons and the public in general, an extensive and varied assortment of Fruit and Shade Trees, Shrubs, Plants and Vines, comprising almost every article usually found in the Nurseries of the Atlantic States.

Our stock of Apple, Pear, Peach, Plum and Cherry Trees, we believe is of a quality unsurpassed in California.

Catalogues, with prices annexed, will be furnished on application.

All orders, accompanied by remittances, will receive prompt attention. Please address

H. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco;
Or, JASON L. SANFORD, Agent, Brooklyn.

P. S.—We expect to receive in December from 50,000 to 70,000 Trees, Shrubs, Plants and Bulbous Roots, from the East, on the arrival of which a supplementary catalogue will be issued. v6-18 3m

Geology.

"THE OLD RED SANDSTONE By Hugh Miller, Editor of the Witness." (Edinburgh.)

"SILURIA. The History of the oldest known Rocks containing Organic Remains. By Sir Roderick Impey Murchison, D. C. L., M. A., F. R. S., &c." (London.)

"PROFESSOR Brande's Lectures on Geology." (London.)

RECENT trans-Atlantic news mentions the death of two distinguished scientific men of the present day—Dr. Andrew Ure, and Mr. Hugh Miller.

Dr. Ure was born at Glasgow, and educated at the University there—thus laying, in the only legitimate way in which a sound education can reasonably be expected, a proper foundation for the high distinction which he afterwards attained, as the most eminent analytical chemist in Great Britain. Mr. Hugh Miller was a self-made and self-educated man. The child of parents in humble life, he had to struggle under many difficulties and disadvantages, which nothing but the inherent abilities which he possessed could possibly have overcome. But like his countryman Ferguson, he had that latent germ of talent which was bound in due time to develop itself, and fit him for taking his place among the most distinguished geologists of the present, or any other times—with Agassiz, Forbes, Buckland, and Murchison.

A humble quarryman at Cromarty, his birthplace, in the remote North of Scotland, he early directed his mind to the pleasures of Polite Literature, and issued a volume of poems, which, if they displayed no great merit, were readable and pleasing, and the reception which they met with was such as to induce him to continue his literary pursuits. His next publication (if we except occasional contributions to local newspapers, among which was a "Letter to Lord Brougham" which attracted considerable attention) was of a higher character. Not only did the style of his "Scenes and Legends of the North of Scotland" evince the easy elegance of Addison, but the Stories themselves were not inferior to the well-known "Lights and Shadows of Scottish Life" of Professor Wilson, or the far-famed "Tales of the Borders" of John MacKay Wilson.

His literary pursuits now brought him into notice, and procured him the friendship of people of similar minds who were able to assist him; and from following the humble occupation of a stone-mason he became an accountant in a Bank.

Soon after this, the disruption in the Church of Scotland took place, and Miller, who was a staunch Presbyterian of the old school, was selected by the Free Church party as the most fitting man they could procure, to conduct a newspaper for them in Edinburgh as the principal organ of their party. Thus established in easy circumstances he soon became conspicuous, not only as one of the most eminent of British journalists, but much greater, as one of the most eminent of European geologists.

Before his time, the attention of geologists, in their search after organic remains, had been principally confined to an examination of the upper strata. But his practical experience in working the "Old Red Sandstone" afforded him facilities of observation which he did not neglect, and enabled him to make contributions to science of which till then learned men were ignorant.

But, as in the siege of a Fort or Citadel the party whose mine is lowest is surest of success, we find in Murchison one who went lower still, and who is consequently entitled to an equal, if not a higher rank. At the instigation of Dr. Buckland, Sir Roderick directed his attention to an examination of the Rocks on the Wye, a river which rising in South Wales empties into the Severn near its mouth, at the upper end of the Bristol Channel. There he had an opportunity of examining the Siluria which underlie the Devonian formations, to which the old red sandstone belongs, and found in these still older rocks organic remains of vegetable life, where before they had never been looked for.

When we take into account the valuable contributions of such men, and find besides that they write with modesty, and a distrust of their ability to solve the increasing enigmas which present themselves at every new discovery to their inquiring minds—when we read the unassuming volumes which they have placed before an admiring world, and afterwards attempt to peruse the unsubstantiated oration of Dr. Winslow, which our learned Agricultural Society concluded to dig from its grave, as a suitable appendage to their own beloved bantling, need we wonder that men of common sense like Mr. Brundage should denounce it as geological romance, and characterize it as "imaginary philosophy"?

It is not by allowing the imagination to run riot that scientific knowledge is obtained, or conjecture is reduced to truth, in any case. Why should we suppose that Geology would prove an exception to the general rule? Let us see therefore how we ought to proceed, to draw correct conclusions from the facts which the explorers of the rocks have procured for us. There is no other way but by following the true inductive method of Lord Bacon. We have no right to take the *ipse dixit* of any man, however learned, because he says it, but *because he proves it.* If we find a stratum of rock of a certain composition, and of a certain thickness, and which under all reasonable circumstances we may think is likely to have been formed in a certain way, and to have taken a certain length of time to effect its formation; the next thing we have to do is to examine what are the most likely objections to such a system; and to weigh and balance the different sides of the question, so that we may ascertain, as far as possible, whether we have not direct evidence that one side is generally speaking true, and the others wrong. We may be able at least to find that a number of the positions on certain sides of the argument are untenable, and may be, resolved by a *reductio ad absurdum.* Having done so much, we are so much nearer the truth. So much rubbish has been cleared away. It is also possible that we may, in the course of our investigation of facts already ascertained, want a few more facts to enable us to know more exactly concerning some particular point. So we have to go to work again with our hammer and chisel in the mountains. And thus chiseling and reasoning, and reasoning and chiseling, the truth at last appears, in some places quite distinctly, but in others only "as through a glass, darkly." Such is Geology.

But though Geology cannot unfold so much perfectly reliable information, of pre-adamite times, as some of its more flatulent admirers would make us believe, it is capable of teaching us much valuable knowledge, which may be of far more consequence to us. It forms the key by which the mining engineer is enabled to expose to view the concealed deposits of mineral treasures, and trace out their true locations with such certainty, as shows how invaluable an acquisition it would have been to the German mountebank, who so successfully sold his pretended skill to the credulous Jonathan Oldbuck! But we are farmers, and the use of this science to the farmer is considerable. The merest glance at the composition of certain rocks will enable any one to perceive this. Feldspar and Mica generally contain from 8 to 15 per cent of potash. Hornblende seldom contains any. Chalk generally nothing but lime and carbonic acid; while Quartz on the the other hand is nearly pure silicon. Now if we find the ashes of the grain plants consisting principally of potash, soda, lime, silica, magnesia, and acids; and also find that some of those rocks contain only some of these ingredients; and are led to believe that the barrenness of any particular district of country is occasioned by the want of some of these necessary constituents of plants, in the rocks which go to compose the soil; it must be evident, that it is a matter of no small consequence to be enabled to know where rocks will be found, that are capable of affording the deficient constituents.

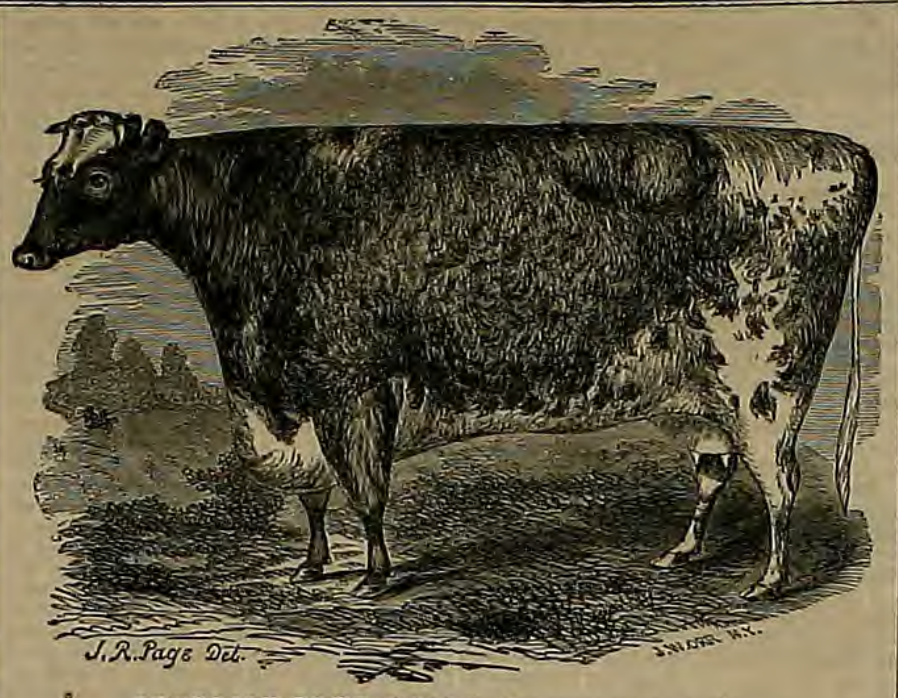
Here Geology comes to our aid. It has been clearly established that rocks succeed each other in regular strata, in an unvarying order. Thus we never find the old red sandstone above chalk; nor granite above the coal formations. The fact is, by means of Geology we are enabled to presume with considerable confidence, that by digging under one species of rocks we will find another. This does not however always occur, as it occasionally happens that some of the usually found strata are wanting. It therefore becomes necessary to make exploratory surveys. But there is a counter-balancing circumstance, which a man may be excused for believing to be a providential arrangement of a benevolent Creator, without suspicion of being supra-religious—it seldom happens that the several strata lie directly horizontally above each other. There has evidently been, at some former period in terrestrial events, great convulsions in nature, by means of which vast upheavals, or depressions, or both, of the earth's surface have taken place; and thus the edges of the different strata, which otherwise would have lain deep in its bowels, are exposed to view, and in consequence of the action of the elements are mixed and commingled, so as to form fertile soils from the conjunction of disintegrated rocks, no one of which, taken singly, would have yielded a soil capable of growing our usually cultivated plants.

But this is not all. By this circumstance we are enabled, not only to find of easy access the different materials which may be wanting in our soils, but also coals, metals, building stones, and all those minerals of different descriptions, which contribute so much to the comfort and advancement of man. But we are farmers, and it is with farming that we have principally to do. The subject of Agriculture is one which calls for our individual attention. "The geological survey and map of my estate," says Sir J. V. Johnstone (I quote from the Journal of the Royal Agricultural Society of England), "has not only explained the reason of the soil and productiveness of neighboring fields—a matter of great interest, and tending to develop the true conditions of vegetable life—but the following positive practical results have been derived from it:—1st. The knowledge of applying lime to advantage over the property. 2d. Laying down fields to advantage in grass; and where and how to plant wheat. 3d. What trees to plant on each stratum. For certain soils are so obviously connected with their bases, that we need scarcely ask how geology and agriculture are mixed together."

The above is valuable testimony, from its affording proof of the importance of science in practical agriculture; as it shows that, by studying geology in connection with vegetable chemistry, much individual scientific research may in many instances be dispensed with. The several rocks, as I have stated, are known to be composed of different ingredients. When therefore a farmer gets acquainted with the different rocks, from which the soils on his farm have been formed, he is not only aware of the different deficiencies of those soils, but also of the kinds of plants for which each particular soil is adapted, without the necessity of having an analysis of the soils themselves taken, to enable him to ascertain such facts.

For these reasons the intelligent farmer will ever hold in reverence the labors of the geologist, and look on his exertions in the cause of science, as one of the principal means of promoting the cause of Agriculture.

AGRICOLA.



SCOTTISH BLUE BELLE—(AT THREE YEARS OLD).

Roan, owned by R. G. Corwin, of Lebanon, Ohio. Bred by James Douglass, Scotland. Calved April 5th, 1852. Got by Molecatcher (10,537), out of Blue Belle by Captain Sharptoe (6833); gr. dam Daisy by Tomboy (5494); gr. gr. dam by Priam (4758); gr. gr. gr. dam Cord, a thorough-bred cow sold at Denton's sale to Mr. Witherell, Yorkshire, England, for 70 guineas.

[For the California Farmer.]

Social Evils.

EDITORS FARMER: In contemplating upon the disastrous condition of the affairs of our State Government, the mismanagement of which is peculiarly apparent, throughout its various departments; the disorders and embarrassments which arise in the proceedings of our courts, the defects in our laws, and the paltry, trifling formalities so frequently observed in matters of the gravest and most important character—both in our legislative and judicial bodies; together with the widespread distrust which now pervades the minds of the whole community, I am disposed to regard as the natural results, flowing from a vitiated public sentiment.

It is known to every one, how relentless have been the assaults of the public press, upon the immediate authors of those giant abuses which have so long paralyzed the prosperity of our commonwealth. The pulpit and the rostrum have denounced, in thunder tones, the pernicious influences of the gambler, the prostitute, and the inebriate, until these have become the scapegoat for the sins of the people. I am aware that it is easier to denounce an evil than to trace out its causes; hence, do we, too frequently, form erroneous conclusions, with regard to the primary causes of those effects, which may be most palpably demonstrated to our senses. Therefore, in taking up this subject, I do so with a consciousness of my own incapacity to render it the justice which its importance demands; hoping, however, that other minds, which are more competent to the task, may be induced to contribute their treasures, towards the investigations of this, one of the most important subjects, to ourselves individually, and as a nation. The primary cause of the disorders so prevalent throughout the social, the political, and the financial organizations of our people, I believe is principally traceable, to the almost universal practice of an indulgence in those various games of pastime. I regard the effects of one game equally as pernicious in its influences upon the moral and intellectual welfare of the community, as that of another. Therefore, whether it be that of cards, billiards, tenpins, or any other game to which our people, both old and young, male and female, are so much addicted, I am persuaded, that to either and to all of these are attributable, in a great measure, the deplorable condition of our affairs. There are many persons, who denounce the practice of gambling, as a heinous offence against the morals of society, and who evince their abhorrence of the evil in promptly supporting, by their approval, the laws prohibiting the same. Notwithstanding, from day to day, these same persons continue to indulge in these idle games, merely, as they say, for pastime. So universal has become this practice, that not a thoroughfare or by-lane in our cities, towns, and villages, that is not polluted by the presence of this canker-worm. Throughout the length and breadth of our State, upon the mountain tops, in the gulches, and along the streams, the blighting effects of this accursed plague are seen and felt. The domestic circle has become a nursery and a hotbed, for the propagation of this leprous scourge, where father and son, mother and daughter, unite in the cultivation of this morbid taste. Our laborers and our mechanics, our merchants and our professional men, our judges and our legislators, our high officials, and low, are addicted to this frivolous pastime; throughout all classes and conditions of our people, are to be seen, to a greater or less extent, the pernicious influences of this growing evil. In the minds of children (to which they are more properly adapted), so far as they amuse them, these games are innocent in themselves; but in the minds of adults they assume an odious and a vicious character. The most important duties of life are too frequently compromised, nay, even sacrificed to the devotions which are given to these amusements. Upon the same principle which renders it impossible for two bodies to occupy the same space, at one and the same time, is the mind likewise incapable of entertaining two subjects, diametrically opposite in their character. Just in proportion as the mind is trained to occupy, and affine itself to those frivolous and useless pastimes, is its fitness and capacity, for affiliating with the intellectual and useful pursuits of life, impaired and estranged. The presumption advanced by the advocates of these amusements, in support of the benefits resulting to the mind from these sources, I deem altogether inadequate to the substantiation of those claims. Aside from, and independent of the propagation of the extreme vices to which this practice inevitably tends, I regard it, in its most harmless aspects, as an evil of such magnitude, as to endanger not only the prosperity and happiness of our people, but likewise eventually to undermine the foundations of our Republic.

In what legitimate occupations, or pursuits in life, is it necessary to employ the knowledge which is acquired in a game of cards, or billiards, or tenpins? There are none. On the other hand, the derangement occasioned by the excitement consequent upon a frequent indulgence of these games, impairs the mind, and renders it unfit, to a greater or less extent, for a healthy and faithful performance of its duties, in the various pursuits of life. The wear and tear of the mind, together with the loss of time consequent upon the indulgence of these games, is utterly useless to the individual, and lost to society. Though he may have discovered the secret by which his antagonist sought to cheat him in the game, the knowledge thus obtained can be of no practical use in the legitimate pursuits of life, but to him a curse, in thus making him a partaker of a vile and disreputable craft.

Those pastimes or amusements which do not yield an equivalent, in some intellectual, moral, or pecuniary benefit, are injurious to the individual, and a theft upon the community.

The effects of these pastimes upon the future prosperity and happiness of thousands of young men, who, though fortunately may not be led into the extreme vices to which they tend, are pregnant with incalculable evils to themselves and to the community at large. Just in proportion as the mind is fascinated by these allurements, are its functions rendered incapable of moral and intellectual action. The mind thus occupied is shut out from the advantages arising from rational amusements, and virtually continues, during its existence, to be governed by the impulses of a child. The innumerable channels of amusement which are presented in the boundless fields of science, and of art, to these are unseen and unknown. Hence do they breathe out a weary existence, rolling from one dependence to that of another, a tax and a burden upon the community, until the stern demands of a dissipated life close their career, in ignorance of the high and noble purposes for which they were by nature endowed.

What a commentary upon the life of the aged, whose silvery locks we are taught to regard as symbols of wisdom and of virtue, to see them mingling with the idle throng, indulging in the excitements of these childish amusements, only for pastime—a tacit acknowledgment that after threescore years a human soul is incapable of self-communion: a lifetime is past, and an intelligent being is ignorant of the objects and purposes of its own creation. They see not the beauties of nature: being ignorant of her works, they are incapable of reasoning from cause to effect: they become stumbling blocks in the various channels of our social organizations, diffusing disorder and distress throughout every department in life. In what respect do these differ from the gambler? Wherein are they better than he? They breathe the same atmosphere; they converse in the same tongue; they become versed in the same craft; they resort to the same base practices, and, in every feature, have they become the same as he, save in this alone: the more enterprising character of the gambler is prompted, through motives of profit, to supply the increasing demand of those who resort thither, prompted by cupidity, to seek amusement and pastime. Thus are the landmarks, which have hitherto been regarded as barriers of distinction between the gambler and the masses, becoming obliterated; and the exalted sentiments of virtue and intelligence, submerged in the companionship of infamy and vice. As an evidence of which, we have only to refer to the past acts and character of a large class of our officials, throughout all the departments of our government, indicating as truthfully the character of their constituents, as do the company they keep, betray that of their own. Until a very great change shall have taken place in the moral sentiments of our people, when they shall eschew those idle games, seeking pastime in the rational and ennobling amusements of science and art, and, in sweet communion with the attributes of nature, become participators in the intellectual progress of a free people, we may predict the future by recurring to the past.

At a future time, I may present a few suggestions, calculated to facilitate a reaction of the minds of our youth, thereby contributing to the restoration of a more healthy condition of our social system.

And with due consideration I remain, your most obedient servant,

E. F. BRUNDAGE.

SACRAMENTO, March 22, 1857.

THE "RED BLUFF BEACON."—This is the title of a new paper published at the flourishing town of Red Bluffs, Tehama county, by Messrs. Clark & Blanton. It is a creditable journal, and no doubt will do the county good service.

The Beacon states that an extensive limestone quarry has been found about ten miles from the place, which it is thought will make the best quality of lime, and that the supply is inexhaustible.

Mad Wolf.—A large gray wolf had, about a month since, passed down Stony Creek, showing evident signs of hydrophobia—biting everything that came in its way, until he arrived at the house of Mr. Kirkpatrick, where he got into a fight with his dogs, and was killed by him with an axe. Since then a dog belonging to Mr. James, that was bitten by the wolf, went mad and bit all the dogs on the place, as well as those of Mr. Kendrick. How much stock he has bitten is not known—a calf belonging to Mr. K. went mad last week. Nearly all the dogs in the neighborhood have been killed.

The Chinese Sugar Cane.

THERE is so much interest felt now for this new and valued product, that we shall give the annexed article in full from the Progessive Farmer. and leave the facts for our readers to judge upon, as to what its value shall be for California. For ourselves, it is our belief that, as green fodder for stock, it has no equal, and we shall anticipate, from the results of the present year, astonishing crops.

We trust those who are receiving it from the Patent Office, and from the State Agricultural Society, will take especial pains to note its character, growth and value in all ways, and report to us that we may lay before our readers the first practical results of its growth its California.

The following is the article above alluded to:

We are pleased to observe that the plant has attracted the attention of some of our best farmers, in the Northern as well as Southern States, and that the results of their experiments have, in almost every instance, been of the most satisfactory character. In our own state, our valued correspondent, I. B. Garber, of Columbia, has grown it very successfully. He says of it:

Apparently it is of the same family of plants as the Dhouri corn, chocolate corn and the broom corn. It will grow on any soil, and in any climate where the broom corn matures. This will come to full perfection, is as easily cultivated as other corn, and it is believed by those in the South who have given attention to the plant, that it will in time supercede the cane, even in Louisiana! It will be largely planted in the South next season.

The only impediment in the way of every farmer making his own *sweetening*, is, the difficulty of crushing, or grinding the stalks, for which purpose heavy iron rollers, or some powerful yet compact machinery will be requisite to properly macerate the canes, so as to press out the juice. After the juice is extracted from the canes, it will not require as much time in boiling down to a proper consistence for sirup or molasses, as it does to boil applebutter. The sirup is superior to the best molasses, as you can judge by the sample left with you; though this was a first experiment, and as "practice makes perfect" we may improve on a second trial. In a state of sirup it may be used in a family for all the purposes, where a pure saccharine is needed. To granulate it, so as to produce a dry sugar, can be effected by a continuation of the evaporating process, and by using the usual re-agents to precipitate and granulate the sirup.

As a *forage plant* it will, I believe, become of great value by sowing the seed broad cast, cutting and drying the fodder, &c.; owing to the large quantity of saccharine matter contained in the stems, stock of all kinds will thrive and fatten on it to greater advantage, than on any other feed.

The Western Farm Journal states that the Chinese sugar cane has been used this season for fattening cattle in Warren county, Ohio. The cattle appeared to be very fond of it, and are said to have gained well, though it may be mentioned that they were fed with a peck of meal each, per day, in addition to the "sugar millet."

The same paper states that Gov. Hammond, of Carolina, in a letter to Mr. Buchanan, of Cincinnati, speaks of this plant as follows:

"I had half an acre planted, and only ground enough to try it. It will do here, and it will do also in your climate at Cincinnati. It will mature sooner than corn, and in any climate suited to Indian corn. A fine sirup can be made of it, at a cost of eighteen to twenty cents per gallon. On an acre of land prepared as you would work it for sugar beets or carrots, you can, with less labor than used for corn, grow enough millet to make five or six hundred gallons of sirup. You can grind and boil from three hundred to three hundred and fifty gallons of juice per day, producing about fifty gallons of sirup. I have not tried it for sugar, and I only desire to save some $600 or $800 annually, that I expend for molasses for my people. It can be kept for grinding. I think it is likely to compete with the sugar cane of Louisiana. I think it is particularly valuable in your region, and hereafter I will give the particulars of my experiment if you desire it."

Sanford Howard, of the Boston Cultivator, cultivated this plant last year, and his experiments "proved the practicability of producing it in Massachusetts, and he suggests that it would probably be more useful as a forage plant, than for producing sugar and molasses; an opinion which the above results sustain.

In addition to the above, the following circular from Richard Peters, Esq., of Atlanta, Georgia, will be read with interest by those who desire to add another valuable plant to those already cultivated in our country. If any of our readers have experimented with it, we shall be pleased to have an account of them, as well as their opinion of its merits for sugar making as well as for forage for cattle.

Messrs. Editors—I feel it my duty to make known to the Southern public the result of my sirup making from the Chinese Sugar Millet, in hopes that others who have sown this valuable variety of the millet, may be induced to work it up into sirup this season.

I send you a few joints of the cane and a sample of the sirup, of which I have made several barrels.

I obtained my start of seed during the spring of 1855, from D. Redmond, Esq., of the Southern Cultivator. I considered it a humbug, from its close resemblance in seed and growth to the Guinea Corn, until my children, towards fall, made the discovery of its being to their taste equal to the true sugar cane.

This year I planted one patch, April 15th, another May 18th, near Calhoun, Gordon county, on land that would produce, during a "seasonable" year, forty bushels of corn per acre, and this year not over twenty bushels.

Seed sown carelessly in drills, three feet apart, covered with a one-horse plow; intending to "chop out" to a stand of one stalk six inches apart in the row; but failed to get a good stand, as the seed came up badly from the deep and irregular covering. Worked out, same as for corn, plowing twice and hoeing once.

By suggestion of Gov. Hammond, of South Carolina, I determined to give the sirup-making a fair trial; consequently ordered from Messrs. Winship, of Atlanta, a very complete horse-power mill, with vertical iron rollers, that has worked admirably, crushing out juice for eight gallons of sirup per hour, worked by two mules, with one hand to put in the cane, and a boy to drive.

On the 13th of this month, finding the seed fully ripe I had the fodder pulled, and the seed heads cut.

Yield of fodder per acre, 1,100 to 1,300 pounds. Yield of seed per acre, 25 bushels of 36 pounds to the bushels.

First trial of mill. 70 average canes gave 20 quarts of juice. 606 average canes, passed once through the rollers, gave 38 gallons 1 quart of juice; passed a second time through, gave 2 gallons of juice; the 40 gallons, 1 quart, gave 8 gallons thick sirup.

I carefully measured an eighth of an acre, having the best canes, and the best stand, another eighth having the poorest canes and the poorest stand. The result I give below, the canes having passed once through the roller.

BEST EIGHTH OF AN ACRE.

Yield of juice from 3 315 Canes,	253 galls.
" " syrup from 253 gallons juice,	58½ "
Rates per acre of sirup,	468 "

POOREST EIGHTH OF AN ACRE.

Yield of juice from 2,550 Canes,	179 galls.
" " syrup from 179 gallons juice,	43¼ "
Rates per acre of sirup,	346 "
Weight of 30 selected Canes,	49½ lbs.
" " Juice pressed out,	25¾ "
" " Crushed Cane,	23 "
Loss in crushing,	¾ "
Weight of Crushed Cane dried in sun	9¼ "

The following tests were made at the mill, by Dr. Robert Battey, of Rome, Ga., a graduate of the Philadelphia College of Pharmacy:

Specific gravity of Juice,	1,085
" " Sirup	1,335
" " New Orleans sirup,	1 321
Thermometer applied to Sirup,	77°
" " Juice,	70°
Saccharometer applied to Juice	25½°

The juice should be placed in the boilers immediately on being pressed out, then boiled slowly, until the green scum ceases to rise; then stir in a teaspoonful of air-slacked lime to five gallons of juice; continue skimming and boiling until the sirup thickens and hangs down in flakes on the rim of the dipper.

I have made the clearest sirup by simply boiling and skimming, without lime or other clarifiers.

The lime is requisite to neutralize a portion of the acid in the juice; the true proportion must be determined by well conducted experiments.

The cost of making the syrup in upper Georgia, in my opinion, will not exceed ten to fifteen cents per gallon. This I shall be able to test another season, by planting and working up fifty acres of the cane.

I am satisfied that this plant will enable every farmer and planter in the Southern States to make at home all the Sirup required for family use; and I believe that our Chemists will soon teach us how to convert the Sirup into Sugar, for export, as one of the staples of our favored climate.

Obtaining such unlooked for success, with the Chines Sugar Cane, I concluded to try our common Corn. From a "new ground," planted 3 by 3, one stalk to a hill, a week beyond the roasting-ear stage, I selected thirty stalks.

Weight of 30 stalks,	35¾ lbs.
" " Juice,	15¼ "
" " Crushed Stalks,	19½ "
Loss in crushing,	¼ "
Yield of Sirup,	1¼ p'ts.

The Sirup of a peculiar disagreeable taste, entirely unfit for table use. RICHARD PETERS.

ATLANTA, GA., September, 1856.

Shall We Have to Abandon Wheat Growing in Western New York.

OWING chiefly to the depredations of the weevil—or more correctly the wheat midge (*Cecidomyia tritici*) it is feared that wheat culture will have to be given up in Western New York, at least for a few years. The subject is one of great importance, and is attracting some attention. At the late meeting of the Farmer's Club of Monroe County, the question for consideration was, "What substitutes for the Wheat crop can be adopted with the most profit in this county?" The fact that such a subject should be selected for discussion at two successive Farmers' Clubs in a county which, according to the census of 1845, produced more wheat per acre than that of any other county in the State, and a greater number of bushels in the aggregate than the whole five New England States, is well calculated to create alarm. Is it true that wheat culture must be abandoned in Western New York? *We think not.* We are well aware that the midge has done serious damage to the wheat crop in this vicinity for the past few years; still we believe the extent of the injury has been over estimated. In 1855, we should have had a full average crop of excellent wheat had it not been for the rainy weather which set in just as the crop was ready to cut, and which continued for nearly a fortnight, causing the grain to sprout to an extent never before known in this country. One of our most experienced millers estimated that at least three fourths of the crop was destroyed in this way; and from careful examination of the crop in several counties at the time, we believe the estimate is none too high. This grown wheat *was used for seed* to a great extent, in the fall of 1855, and the crop of last year suffered materially in consequence. The failure of the wheat crop in 1855–6, therefore, cannot be ascribed to the depredations of the midge alone, but, in some degree, at least, to causes which are of unusual occurrence.

While this is true, we cannot close our eyes to the fact that the midge has made serious havoc with the wheat crop in some sections. On one field in this vicinity, which came under our own observation, last year, at least one-half of the crop was destroyed; but this took place on land which was too low and too wet to grow a good crop of wheat, even under the most favorable circumstances. On another field on the same farm, where wheat was sown on good, dry, well-prepared soil, a little over twenty bushels of good wheat was obtained per acre. *So far as we could judge, the midge injured one nearly as much as the other.* Had not the midge injured either of the fields of wheat, the one would have produced a crop of ten bushels, and the other a crop of twenty-five bushels per acre. The midge destroyed five bushels per acre on both fields, and left, on the low, wet land, five bushels, and on the good land, twenty bushels per acre. The midge destroyed as much wheat in both cases, though it took half the crop on one field, and only one-fifth on the other!

There may be instances where the midge has destroyed more than five bushels per acre, but we think that in this neighborhood, except under very unfavorable circumstances, this was the extent of the damage. Now, while a loss of five bushels per acre causes no trifling diminution of the profits of even an unusually large wheat crop, yet it is evident that the loss is far less under a good than under a poor system of cultivation. It seems to us, therefore, that instead of looking for substitutes for the wheat crop, we should endeavor to ascertain the most economical means of increasing the fertility of our farms, and of concentrating more labor and manure on those portions of the farm best adapted to wheat culture.

On the farm of Mr. E. S. Hayward, of Brighton, in this county, results were obtained, last year, even more favorable to "high farming" than in the instance already mentioned. He obtained his seed from Canada (where the harvest weather of 1855 was propitious, and the wheat was not injured as in this neighborhood), and sowed two bushels per acre, on naturally good, dry wheat soil prepared in the best manner. From the quantity of shrunken grains, it was estimated that the midge destroyed about five bushels per acre, and yet the crop yielded over thirty-five bushels of very superior wheat per acre. The midge in this instance destroyed as much wheat *per acre* as in the first case mentioned, where it eat half the crop, and yet here only one-eighth of the crop was lost.

We are well aware that it has of late years been fashionable to recommend "High Farming" as a remedy for every evil that affects the farmer; and though we have more than once shown the absurdity of such recommendations, it is evident to us that the best means of alleviating the fearful injuries caused by the wheat midge will be found in a better system of cultivation, or, if you will excuse the term, in "High Farming."

It is well known that early wheat is less liable to injury from the midge than that which matures later. The reason for this is well known, and we need not allude to it here. On this account early sowing is generally recommended, and has been attended with success; but early sown wheat is more liable to injury from the Hessian fly than late sown. Early sowing, therefore, cannot be adopted in all cases. The object of the wheat grower, it would seem, should be to increase the early maturity of the berry, or to accelerate the elaborating processes after the grain is formed. Anything which increases the *healthy* growth of the wheat is favorable to this result. Underdraining is one of the great prerequisites on all land that is not naturally drained. The next thing is to supply the plants with *appropriate* food. In saying this we would guard against a popular error. The food of wheat is composed of the same elements as that of other plants, and, in one sense, therefore, the food of wheat is the same as the food of other plants. So of the food of animals, however diverse in form and characteristics it may be, it is all composed of the same elements. The food of the gentle lamb and the food of the fierce tiger are composed of the same elements, but still there is a vast difference between grass and flesh. So the food of plants is composed of the same elements, though there is unquestionably a great difference between the appropriate food of wheat and of many other agricultural plants. A carniverous animal would not remain long in health if fed on vegetables, neither can we expect wheat to attain its maximum healthy growth unless fed on its most appropriate food. What that food is, thanks to the experiments of Lawes and Boussingault, is now pretty definitely understood.

The appropriate food of wheat abounds in ammonia, and is comparatively deficient in carbonaceous matter. It also contains less available potash and phosphates than is required in the appropriate food of clover and turnips. It should be the aim of the wheat grower, therefore, to increase the amount of ammonia in the soil without increasing the quantity of carbonaceous matter. We have frequently stated how this can be most economically attained. Grow clover, peas, beans, turnips, rutabagas, mangelwurtzel, beets, carrots, parsnips, artichokes, lupins, and such other crops as obtain a large amount of ammonia from the atmosphere; feed these crops out on the farm to animals, and if grain is fed to them in addition, let it be such as, other things being equal, contains the largest quantity of nitrogen (see table in last number, page 10); husband the manure so as to retain all the ammonia, and this will furnish the wheat with *appropriate* food.

The object of the wheat grower, we have said, should be to increase the early maturity of the berry. Fortunately, an increase of the appropriate food of the wheat plant seems to have this effect. James Caird, of Beldoon, Scotland, dressed a fifty acre field of wheat with 224 pounds of Peruvian guano per acre, at the time the seed was sown in the fall, leaving an acre in the centre of the field without guano. The product at harvest was, without guano, 25½ bushels per acre, weighing 60 pounds per bushel; with guano, 32 bushels per acre, weighing 63 pounds per bushel.

What we wish to call attention to, however, is not the increase of wheat from guano, or the superior quality of the grain on the guanoed portion of the field, but to this remarkable fact; the acre without guano in the centre of the field, *was a week later in ripening* than where the guano was used.

We think most farmers will agree with us that if we could bring our wheat to maturity a week earlier than usual, we should have little to fear from the ravages of the midge. We are not, however, about to recommend the farmers of Western New York to use guano,—at the present price of guano it would hardly be profitable, unless wheat commands a high price. We must supply the soil with the elements of guano from natural and more economical sources. The plan we have recommended,—growing more roots, clover, peas, &c., and feeding more stock on nitrogenous foods—will be an approximation to this object. Peruvian guano is nothing more nor less than the excrements of birds living on highly nitrogenous food; namely, fish. The excrements, as we explained in an article on "Barn Yard Manure," in last number, may be considered as fish with nearly all the carbon extracted from them by the processes of nutrition. Wheat needs but little carbon in its food, and a large quantity of ammonia, and hence guano is one of the very best manures that can be used for wheat. Now fish, in their natural state, may be, and unquestionably are, very beneficial as a manure, but any organized matter is not as natural a manure as the excrements obtained from the consumption of such matter. Animal life cannot exist on inorganic matter, and plants cannot live on organized matter. The lifeless substances of earth and air are organized by plants, and are thus made capable of sustaining animal life, with all its pleasures. It is true that there are plants which appear designed to furnish by their decay matter for the support of plants of a higher organization, but there are few if any agricultural plants which properly belong to this class. It is contrary to the economy of nature to use plants which are capable of sustaining animal life for the purpose merely of furnishing food for other plants. It is reasonable to suppose, therefore, that decayed vegetable plants do not furnish as healthy food for the high order of plants as the excrements of animals living on these plants. For this reason, while we are earnest advocates for the extensive cultivation of clover on all wheat farms, we think it is contrary to the laws of nature to plow under such a large amount of matter capable of sustaining animal life for the simple purpose of furnishing food for the following wheat crop. Manure furnished by decayed clover is not as appropriate food for wheat as the excrement of animals living on clover. It contains too much carbonaceous matter, and while the nitrogen furnishes, by decay, the required ammonia—and this ammonia not only increases the crop, but accelerates early maturity—the carbonaceous matter (forming over four-fifths of the clover) is of little manurial value, and at the same time has a tendency to *retard the ripening processes.*

In order to enrich the land, therefore, and at the same time increase rather than retard the early maturity of the crop, we would recommend to grow as much or more clover than at present, and instead of plowing it under to convert the organized carbonaceous matter into beef, mutton, cheese, butter, wool, &c., and to return the ammonia to the soil in the form of manure.

We cannot bring ourselves to believe for a moment that we shall have to give up wheat culture in Western New York. It is true that in the Eastern States, and in the eastern counties of this State, wheat culture has been to a great extent abandoned. The soil there is not and never was a good, natural wheat soil, and the farmers have found it cheaper to cultivate other crops than attempt to compete with western growers in the production of wheat. The ravages of the Hessian fly, it is true, and the impoverishment (not *exhaustion*) of the soil have also helped to bring about this result, but the case is different with us. Our soil and climate are exceedingly favorable for the production of wheat. There is no better wheat soil in the world, and but very little in this or any other country that is as good. In fact the soil which is naturally adapted to wheat is comparatively limited on this continent. This fact is an additional reason why the farmers of Western New York should not abandon wheat culture without an earnest effort to discover some method of counteracting or at least mitigating the ravages of the midge. If the "Genesee country" will not produce wheat, where shall we look for the "staff of life?"

While nearly all the soil of Western New York is well adapted to wheat culture, there are, on every farm, some fields that are more suitable for wheat than others. We must confine the cultivation of wheat to such land. Let the portion of the farm less favorable to wheat be cultivated with those crops which, when consumed on the farm, furnish the most valuable manure. Let this be used to enrich the soil for wheat. [How this can best be done we leave for future consideration.] In short, sow early varieties of wheat on the best portions of the farm, underdrain, adopt a judicious system of manuring, and, our word for it, wheat culture will not have to be abandoned in Western New York.—[Genesee Farmer.

General History of the Horse.

THE following history of the Horse is extracted from the Library of Useful Knowledge, published in London:

The native country of the horse cannot with certainty be traced. He has been found, varying materially in size, in form and in utility, in all the temperate, in most of the sultry, and in many of the northern regions of the Old World.

In the Sacred Volume, which, beside its higher claims to stand at the head of the Farmer's Library, contains the oldest authentic record of past transactions, we are told that, so early as 1650 years before the birth of Christ, the horse had been domesticated by the Egyptians. When Joseph carried his father's remains from Egypt to Canaan, "there went up with him both chariots and horsemen." One hundred and fifty years afterwards, the horse constituted the principal strength of the Egyptian army. Pharaoh pursued the Israelites with "six hundred chosen chariots, and with all the chariots of Egypt."

If we could believe the accounts of the uninspired historians, Sesostris (the monarch probably whom Joseph served), had twenty-seven thousand chariots of war; and Semiramis, the founder of Babylon, had one hundred thousand chariots, and a million of horsemen; but this was probably a great exaggeration.

Fifty years after the expulsion of the Israelites from Egypt, and 1450 years before the birth of Christ, the horse was so far naturalized in Greece, that the Olympic games were instituted, including chariot and horse races. We have, therefore, sufficient evidence that the horse was, at a very early period, subjected to the dominion of man, and unfortunately, for the worst of purposes—the business of war.

From the records of the Old Testament, we are likewise enabled to ascertain the precise period of time, when in Egypt and Canaan, and the neighboring countries, this animal began to be domesticated. 1920 years before the birth of Christ, when Abraham, having left Haran, in obedience to the divine command, was driven into Egypt by the famine which raged in Canaan, Pharaoh offered him sheep and oxen, and asses and camels. Horses would doubtless have been added, had they existed, or had they been subdued in Egypt.

When, fifty years afterwards, Abraham journeyed to Mount Moriah, to offer up his only son, he rode upon an ass, which, with all his wealth and power, he would scarcely have done, had the horse been known.

Thirty years later, when Jacob returned to Isaac with Rachel and Leah, an account is given of the number of oxen, sheep, camels, goats and asses, which he sent to appease the anger of Esau, but not one horse is mentioned.

It is not until twenty-four years after this, when the famine devastated Canaan, and Jacob sent into Egypt to buy corn, that horses are first heard of. "Wagons," probably carriages drawn by *horses*, were sent by Joseph into Canaan to bring his father to Egypt. It would seem, however, that horses had been but lately introduced, and were not numerous, or not used as beasts of burden; for the whole of the corn, which was to be conveyed some hundred miles, and was to afford subsistence for Jacob's large household, was carried on asses.

It appears, then, that about 1740 years before Christ, horses were first used in Egypt; but they soon afterwards became so numerous as to form a considerable proportion of the Egyptian army; and when the Israelites returned into Canaan, the horse had been introduced and naturalized there; for the Canaanites "went out to fight against Israel with horses and chariots very many."

The sacred volume, therefore, clears up a point upon which no other record throws any light,—namely, the period when the horse first became the servant of man, at least in one part of the world, and that, the most advanced in civilization, and before Greece was peopled. A long time must have elapsed before man was able to ascertain the value and peculiar use of the animals that surround him. He would begin with the more subordinate—those which were most easily caught and most readily subdued; and the benefits which he derived from their labors would induce him to attempt the conquest of superior quadrupeds. In accordance with this, the writings of Moses show us that, after the ox, the sheep, and the goat, man subdued the ass, and then the camel, and, last of all, the horse became his servant; and no sooner was *he* subdued, and his strength and docility and sagacity appreciated, than the others were comparatively disregarded, except in Palestine, where the use of the horse was forbidden by divine authority, and on extensive and barren deserts, where he could not live.

When Sir George Ousely traveled through Persia, and the different countries of the East, he examined, among other relics of antiquity the sculptures on the ruins of Persepolis, and he draws from them a curious and interesting conclusion as to the manner in which the horse was gradually subdued. "There are no figures," says he, "mounted on horseback, although some travelers have mentioned horsemen among those sculptures. One would think that the simple act of mounting on a horse's back would naturally have preceded the use of wheel-carriages and their complicated harness; yet no horsemen are found at Persepolis; and we know Homer's horses are represented in chariots, from which the warriors sometimes descended to combat on foot, but the poet has not described them on horseback. The absence of mounted figures might authorize an opinion that those sculptures had been executed before the time of Cyrus, whose precepts and example first inspired the Persians with a love of equestrian exercises, of which, before his time, they were wholly ignorant.

From Egypt the use of the horse was propagated to other and distant lands; and, probably, the horse himself was first transmitted from Egypt to several countries. The Greeks affirm, that Neptune struck the earth with his trident, and a horse appeared. The truth is, that the Thessalians, the first and most expert of the Grecian horsemen, and likewise the inhabitants of Argos and of Athens, were colonists from Egypt."

The Bible likewise decides another point—that Arabin, by whose breed of horses those of other countries have been so much improved, was not the native place of the horse. Six hundred years after the time just referred to, Arabia had no horses. Solomon imported spices, gold and silver, from Arabia; but all the horses for his own calvary and chariots, and those with which he supplied the Phœnecian monarchs, he procured from Egypt.

The historian gives us the price of the horse and the chariot at that time. A horse brought from Egypt, including, probably, the expense of the journey, cost one hundred and fifty shekels of silver, which, at two shillings three pence, and one half farthing each, amounts to about seventeen pounds, two shillings. A chariot cost six hundred shekels, or sixty-eight pounds eight shillings; a most enormous sum at that early period, but little to him who expended more than thirty-five millions of pounds in gold alone, to ornament the Temple which he had built.

In the seventh century after Christ, when Mahomet attacked the Koreish, near Mecca, he had but two horses in his whole army; and at the close of his murderous campaign, although he drove off twenty-four thousand camels, and forty thousand sheep, and carried away twenty-four thousand ounces of silver, not one horse appears in the list of plunder.

There is a curious record of the commerce of different countries at the close of the second century. Among the articles exported from Egypt to Arabia, and particularly as presents to reigning monarchs, were horses.

In the fourth century, two hundred Cappadocian horses were sent by the Roman emperor, as the most acceptable present he could offer a powerful prince of Arabia.

So late as the seventh century, the Arabs had few horses, and those of little value. These circumstances sufficiently prove that, however superior may be the present breed, it is comparatively lately that the horse was naturalized in Arabia.

The horses of Arabia itself, and of the south-eastern parts of Europe, are clearly derived from Egypt; but whether they were there bred, or imported from the south-western regions of Asia, or, as is more probable, brought from the interior, or northern coasts of Africa, cannot with certainty be determined.

[TO BE CONTINUED.]

Home—What is it?

NOT merely a place to lay the head, to be sheltered from sun and storm. Many of the half reasoning brutes have this. But a locale, where all the beauty and comfort should be blended together, which God has placed within the reach of intelligent minds. There are no people on the globe that should cherish home more than our rural population. Blessed with a fertile soil and genial climate, surrounded with all that is lovely and beautiful in nature's wildings, why should not even the smallest farmer make his home an Eden? It is not surely for the want of means; we fear it is rather for the want of taste and a feeling of indolence that prevails, as soon as men enter their own homesteads. Could the dwelling, yard and garden be carried to the market town—be shown at the political gathering, or be exhibited with the fine carriage and clothes, at church, the rural homes of the country would present a different appearance. When we learn to improve and embellish home, for the pleasure it affords ourselves, for the happy influence it has upon our children, then will the rural homes of the South become the nurseries of beauty, or virtue, and of patriotism. Then what should be a home? A dwelling as spacious and comfortable as the means of the proprietor will admit of. A yard and grounds planted with whatever taste and skill the *good wife* can command. A garden stocked with every vegetable, an orchard with all the fruits, with flowers and shrubs, to deck all the waste places, and pure water from the well or spring to refresh and ornament, with a hundred other *little* comforts, all of which tend to bind and harmonise home with whatever is pure and holy in our nature. Cherish home, then, ye ministers of the humble Nazarene, who would people earth with virtue and Heaven with souls. Learn to plant and love trees; learn to plant and love flowers; cultivate that peace of mind which the daily and hourly communion with the beauties of nature inspires, and ten thousand *little* Edens will bloom all over the wilderness country. And these will be Homes, such homes as every reader of this journal should have.—[Ala. Cotton Planter.

A HINT FOR HOUSEKEEPERS.—A few drops of carbonate of ammonia in a small quantity of warm rain-water, will prove a safe and easy anti-acid, &c., and will change, if carefully applied, discolored spots upon carpets, and indeed all spots, whether produced by acids or alkalies. If a carpet is injured by whitewash, this will immediately restore it.

SIR WALTER SCOTT has truly remarked "that to teach a boy to read, and then not to place good books within his reach, is like encouraging his appetite, and leaving nothing in the pantry except unwholesome and poisonous food—which, depend upon it, he will rather eat than starve."

Miscellany.

EARLY DAYS.

BY DORA DE LYLE.

Their memory comes like sunny gleams
Across my darkened path,
Or like the vivid lightning's flash
Amid the tempest's wrath;
Or like the rainbow on the cloud
Its darkness to illume,
Or like the rose wreath love hath brought
To smile upon the tomb.

It comes to cheer my lonely way
With many a pictured dream,
To gild life's dark and shadowy way
With joy's reflected beam;
And while the sunlight falleth dim,
And darkness veils the night,
To the pale stars of other days
My spirit turns for light.

For I have seen the hopes of youth
Fading in slow decay,
The sacred promises of truth
Like frostwork melt away;
When of the sparkling cup of bliss
My trusting soul would sip,
I've found the draught all bitterness
And dashed it from my lip!

And can it be that in life's maze
No happiness is found?
Say, is there no sweet resting place
In all earth's varied round?
No bright oasis for the heart
Where "Love's sweet fountain flows"
To cool the parching lip and brow
Amid a thousand woes?

Not here, not *here!* the mournful truth
Is borne on every breeze!
It sighs through autumn's fading bowers
And murmurs o'er the seas—
The solemn moonlight silently
Doth whisper as we stray,
Oh seek not *here* for happiness,
It dwelleth far away.

Beyond you blue and starlit dome,
Where sin and change are o'er,
There is the glorious spirit home
Where thou shalt weep no more!
Then onward—in life's thorny path
Its flowers shall yet be thine,
If thou wilt keep the "narrow way"
That leads to life divine!

BASTROP, Texas, July 24, 1856. [Louisville Jour.

[For the California Farmer.]

THE SLUG AND THE PICAYUNE.

BY THE AUTHOR OF &c.

[The following very interesting sketch of these two pieces of coin, is most admirably done in story by our correspondent, and we can but concur in the rebuke it conveys to the worshippers of Mammon, as well as the tribute it pays to Virtue and Affection; while the well-pointed moral is so happily delineated by our friend, &c., that he should dream again; seldom do sleepers accomplish more than he. We trust those whom he thus rebukes (for there is meaning in this dream) will remember that "all is not gold that glitters," and that it is not gold that makes the man—worth makes the man.]

Who can account for the strange things that appear in a dream? Sometimes ladies dream that the *Devil is in their Pickle Jar(!). (They are in a *divil* of a *pickle* then, *aint* they?) But ladies generally dream of beaux and flowers. Sometimes we have pleasant dreams, and sometimes horrid ones; and sometimes our dreams make such an impression upon us that they appear like a reality. Not long since I had a dream, that I can hardly believe was a dream.

I had two pieces of money, and only two: One was a California *Slug* or fifty-dollar piece; the other was a *Picayune*. These were in my pantaloons' pocket; they under my head, and I asleep. Towards day I awoke, or seemed to wake, and heard (or seemed to hear) the following conversation going on between the pieces of money:

"Here I have been," said the Slug, "for the Lord knows how long in this poor devil's pocket, and have never had a companion during the whole time. I wish he would get hard up and let me out into circulation once more. How I do hate poor people; and I wont stay with them long at a time. I have been with this one about twice as long now as I ever was with one of them before."

"You don't appear to know that I am here," said the Picayune; "but I can tell you that if I am small, I am a great deal older than you, and have seen more than twice as much of the world."

"Well," said the Slug in a patronizing tone—for *big* folks always talk so when they are forced into the company of their inferiors. "Well, perhaps you have, Mr. Pic; but you and I have always moved in a different circle; you have always been with some such fellow as we are with now, while I have almost always been with the rich, and of course the great, for money is power. I have been in the *society* of poor men before, but I never staid long. I don't wish my owner any particular harm, but I wish he would get married; and I heard him *talking soft talk* to a young lady the other day, who was both poor and proud: if he was to get her, Mr. Pic, why even you could not stay in this infernal old pocket. Would not you like to get out?"

"I am very well contented where I am," said the Picayune, "except perhaps, I would like to get out of California, for here I am treated with contempt; but I have seen the time, Mr. Slug, when I have been worshipped."

"Whew!" said the Slug; "you worshipped! well, that will do! What would folks that worship you, think of me?"

"You can never be appreciated as I have been," said the Picayune; "for your very presence would drive off starvation; with me it is otherwise. I circulated round the cities of the Eastern States, and have seen poverty in every shape. Once I was with a widow who had a little daughter about ten years of age. Neither mother or daughter had tasted a morsel of food for twenty-four hours. The widow held me in her hand and the tears of anguish fell like rain over her colorless cheeks. 'Don't Ma,' said the child, 'don't cry; we will both die pretty soon, and then we will go to the Good Man's house, where the good book says there is no sorrow; we will have plenty to eat there, wont we Ma.' 'Yes we will be well provided for there,' said the mother, and she took her child in her arms, and they both kneeled down and prayed to their God to give them fortitude to bear up against starvation. You Mr. Slug, have never seen so holy a scene, nor you never will; you have been to church and seen people go through the mockery of prayer, while their hearts were set on you. After about half an hour spent in prayer, they both rose; but not a tear dimmed the eye of either. 'Ma,' said the little girl, 'Ma, I don't feel hungry now; I never do when I pray. It is only when I get mad and fret so, that I get hungry; if we were to pray all the time, we would not think about eating, would we Ma?' The mother smiled, but she could not speak. At length she said, 'here my child, take this and go over to the bakers, and get us a loaf of bread, and we'll have a feast.' The little girl took me into her hand, and ran across the street to the bakery. 'Mr. Baker,' she said, Mr. Baker, give me a loaf of'—— and the tears of joy choked her utterance. There was a gentleman in the shop, that talked to her awhile, and then gave her some cakes and the bread, and told her to keep her money. She ran home and exclaimed when she got to the door: 'Oh! Ma! I saw such a good man over to the bake shop; he gave me all these things, and I have brought the money back.' Her mother was kneeling down by an old broken chair, with her face in her hands. 'Are you asleep, Ma,' said the girl? 'are you asleep?' and she raised her head with one hand. Her cakes dropped on the floor, for her mother was dead. 'No, no,' she said; 'Ma has gone to the Good Man's home, and left little Jane here by herself. Nobody loves little Jane now, and she will be put out in the snow because she can't pay for a little room to stay in. Oh! please Good Man, take me along with Ma. I have been a bad girl sometimes, I expect; but I will always try to be a good girl up there. Oh, do please let me go too!' And she threw her tiny arms round her mother's neck, and they both fell over to the floor. She talked to her mother, and prayed that she might go with her, for a long time; and at length her little heart ceased to beat, for it was broken.

"I fell on the floor with the cakes, and was picked up by the undertaker, who said that he *guessed* I would get him a horn of brandy; and the next place I found myself was in a grogery."

"Your experience and mine have been very different," said the Slug; "but I assure you that I have seen a little of the world myself. I once helped to buy a Governor, and upon one occasion I actually bought an Attorney General myself. When I have been engaged in purchasing Legislators, they have sometimes given back some change. I have helped to induce newspaper editors to change their politics; I have let criminals out of the State prison; I have been the cause of several murders, and there is no end to the *Hon.* Judges that I have purchased. Upon the whole I have been a considerable Slug, if I have been in existence only a few years. But Mr. Pic, you said just now that people had worshipped you; please tell me about it, for I like to hear you talk."

"That has often occurred," said Pic; "you have heard of misers, have you not? Well, I fell into the hands of one of those fellows once, and he said that he liked picayunes better than he did dollars. *He* worshipped me. Then I was once given with a few other chaps like me, to a starving girl as the price of her honor. *She* worshipped me: 'Oh! money!' she said, 'thou art the idol of the world, and henceforth thou shalt be my idol. I will go down to the lowest depths of profligacy to find you. There is no just God, and the Bible is a fiction; for it says that he will be a father to the fatherless, and where is the proof of it? *No!* MONEY is the true God! for all the world worship it. I will take this Picayune and hang it round my neck as a remembrancer of my vow; and it will also help me to remember the days of my innocence, when I thought there was a more powerful God than Money. O Ignorance, thou art bliss! and none but the foolish seek to be wise!'

"I hung round the girl's neck for two years, at the end of which time she died. But every day she used to take me in her hand and talk to me. Sometimes she would pray to her God, the Creator, to forgive her sins and lead her into the paths of righteousness; but then she would say that she knew her sins were past forgiveness. At any time during those two years, had any one have talked kindly to her, and have pointed any road that she could have traveled through life except the one she was in, she could have been saved. But NO; human philanthropy does not extend so far; and as a general thing, Mr. Slug, that girl was right: *the Idol of the World is Money.* To get hold of such fellows as you are, is what every man, woman and child, almost, are striving for."

"You are a philosopher, Mr. Pic," said His Slugship. "For my part, I never paid any attention to such trash. I like to be passing round from one person to another, or what I like best is to be exhibited on some banker's counter."

"Yes," said Picayune; *wealth likes show, but poverty likes seclusion.* That is the difference between you and I; you represent wealth and I represent poverty. And the only thing in which we resemble each other is, that we are both continually passing from one person to another. A man may be rich to-day and poor to-morrow, or *vice versa.*"

"Well I wish," said the Slug, "that our present owner would either get richer or poorer, so that he would have to let us go, or get us more company. But tell me, Mr. Pic, how you happened to get to California? no one ever imagined that you would make a fortune for them, did they?"

"Accident brought me here," said Pic, "and accident has done more in this world than anything else; it has made the rich poor, and the poor rich; it has made the christian a sinner, and the sinner a christian; it has made the humble proud, and the proud humble; it has raised men to the highth of earthly power, and then degraded them; it has brought from seclusion great writers and great statesmen, and it has prevented others equally as great from ever being known: in short, *accident* is the ruler of the world; but *money* is the executive officer. And among other *great* things that accident has done, it brought me here, and I am waiting for accident to take me away; for I have never done any good here, except perhaps it was to swindle a *monte* dealer."

"Swindle a monte dealer," said Slug; "tell me how it was accomplished?"

"Well, you are aware," said Pic, "that in the night there is a remarkable resemblance between a gold dollar and myself, and upon one occasion a fellow took it into his head that he could make a 'spec' by laying me on the monte table, and by saying nothing pass me off for a gold dollar. He tried it and succeeded. I won for him ten silver dollars. The gambler won me at length, and threw me into a box with his gold, and next morning when he found me then he threw me into the street, and people walked over me every day, but no one would stoop to pick me up. How would you like that kind of treatment, Mr. Slug?"

"There is no danger of my ever receiving such treatment," said Slug.

"No, there is no danger," continued Pic; "poor folks are often neglected, and trodden on by the world; but rich ones, never."

Here the conversation ended, or my dream closed, or else I have forgotten the rest, and I would upon no account put down anything that I have not a distinct recollection of hearing.

Mr. Slug and I have parted company, but Pic sticks to me, and I intend sending him east; so, kind reader, if you are going that way, you will do me a favor by taking charge of him. Poor fellow, I want him to get back to where he is appreciated!

And I also would like to get among a class of readers that could *appreciate me.*

Where "in this wide world" are they to be found? Echo answers (no)"where?"

BEN. PERLEY POORE.—This gentleman, whose recent great wheel-barrow feat is still fresh in the memory of many, was present, as an invited guest, at the recent annual festival of the Columbia Typographical Society in Washington, and in answer to a complimentary toast, made the following neat little speach:

Mr. President—Having served a regular 'prenticeship in a printing office, I no sooner saw your announcement of this festival than I determined to join my fellow craftsmen in honoring the natal day of the noblest graduate of our Alma Mater. I had hoped to come here of my own accord, nor was it until this afternoon that I received the polite invitation of your committee, honoring me with a "sit" at the upper end of the table. This I well knew would subject me to a call for "copy;" but I did not expect to be called upon at such an early hour, for I had reason to believe that the "paper was full." All that I expected, to be called to furnish in my Poore way, was a contribution to the *agricultural department*, on the fourth page, showing perhaps the best way to get apples to market. Pardon me, Mr. President, if I attribute this early call from you to the fact that the cold has kept my seniors away, rather than to my own merits, and I thus stand before my fellow-craftsmen merely as a "sub."

Cordially, fellow-craftsmen, do I second the idea just advanced, that printers should erect a monument to the memory of Benjamin Franklin. Gladly would I see such a work, executed by the gifted sculptor alluded to; but not at the Printer-Philosopher's tomb. Boston has honored his birth-place; let Philadelphia, who so profited by his bounties and so cherished his fame, honor his grave. I would rather see a monument in this city, occupying one of the vacant reservations on Pennsylvania avenue; and I would not only have it an evidence of our patriotism and of our gratitude, but of our calling. Others have represented him as a legislator, as a philosopher, as an ambassador; let us represent him in the pursuit of his favorite calling—as a PRINTER! Let the sculptor reproduce him, standing with his shirt-sleeves rolled up, and with a paper cap on his head, by the side of his old Ramage press! And when we have placed such a witness of the power and of the purity of our calling before their eyes, I doubt much if our legislators will seek to air their eloquence by defaming us.

We may not, fellow-craftsmen, claim the honors bestowed upon the "Typothetæ" by Frederic the Third, of Germany, and have our especial social rights; but let us ever, as one man, sustain the honors of the Press. Mind acts upon mind now-a-days, almost with that telegraphic velocity which has annihilated time and space, and if we do not rise promptly above all uncharitableness, we must grovel at the feet of those who assail us, and write *Illium fuit* upon the "beds" of our presses.

Good reason for not fighting duels are in demand about these times, and we recall none better than the one given by a celebrated French duelist by the name of Evremont. He had approached a perfumed dandy, and being disgusted with the aroma that met his nose, he exclaimed, "How shockingly that man smells!" The sweet-scented party resolved to snuff the insulter's blood, and sent him a challenge, which the wiley and witty duelist declined in these words: "Were you to kill me you would not smell the less; and were I to kill you, you would smell the more."

NO HARM.—"Mother," said a little fellow the other day, "is there any harm in breaking egg shells?" "Certainly not, my dear; but why do you ask?" "'Cause I dropped the basket jist now, and see what a mess I'm in with the yolk."

WOMAN'S RIGHTS.—A good-natured husband, a dozen children, and a happy home.

* For an interesting description of the Nightmare or "The Devil in the Pickle Jar," see CALIFORNIA FARMER, Number 9. But it appears that the D—l or something else got into the *head* of the authoress, for instead of signing her name plain Alice, that we all love (don't get jealous, Mr. H.?), she has Ordelle, and an *alias*. Ordelle is a stranger, and *aliases* belong to Gen. Estelle's flock. Allow, I protest.

HORTICULTURAL.

Commercial Nursery,

Three-Quarters of a Mile East of the City of San Jose.

THE Proprietors of this Nursery, having received the award of the FIRST PREMIUM OF THE STATE SOCIETY the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of FRUIT AND ORNAMENTAL TREES, *For the Trade of* 1856 *and* 1857, that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.

Our Stock consists of

One Hundred Thousand Trees,

FROM FOUR TO ELEVEN FEET IN HIGHT.

Apples, 80 best varieties;
Pears, 25 "
Cherries, 23 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;

TOGETHER WITH

Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.

Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.

Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.

Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.

Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.

☞ Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.

All communications addressed to the subscribers will receive prompt attention.

v7-1 3m SMITH & WINCHELL.

Smith's Pomological Gardens AND NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast. Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

☞ Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ **J. F. SWIFT,** No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.

v6-19 3m A. P. S.

San Jose Nursery.

THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of

FRUIT AND ORNAMENTAL TREES, ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.

Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 69 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.

The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer

Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.

In each of the above the very best and most approved varieties.

The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—

Black and Honey Locust;
Chinese Ailanthus, Catalpas.

—Also,—

25,000 Mulberry Trees,

All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.

ROSES! ROSES!! ROSES!!!

In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 96 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.

The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.

Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.

Address letters to L. PREVOST,
San Jose City.

The French Garden,

Near the Cottage, on the Santa Clara Road.

A. DELMAS,.....PROPRIETOR.

GRAPE VINES! GRAPE VINES!!

THE Proprietor of these extensive grounds would take pleasure in calling the attention of the public to the very great collection of Grape Vines, which he will offer the present season.

The Fruit from this Garden was exhibited at the late State Fair, and received the Diploma of the Society. The White Wine made from this Vineyard received the First Premium of the State Society. This Vineyard also obtained the First Premium for the Best Vineyard of Foreign Grapes, the present year.

The Proprietor will offer the present season his grand collection of Eighty One Varieties. Among this splendid assortment will be found—

Black Hamburg;
Chasselas of Fontainbleau;
Chasselas of Frondignac;
Cannon Hall Muscat;
Muscat of Alexandria;
Charlesworth's Tokay;
Syrian; Black July;
Golden Chasselas;

Together with every variety of the Grape known and approved.

The undersigned is confident that this collection is the largest and most complete in the country, and to this the attention of the public is particularly invited.

The subscriber would also offer—

APPLE, PEAR, PLUM, PEACH, APRICOT, NECTARINE, and other Fruit Trees.

—Also,—

RASPBERRY, CURRANT AND GOOSEBERRY TREES, In good assortment.

Catalogues of all the varieties grown in this Garden will be sent to all who desire them, by addressing letters to the proprietor.

All orders will be answered promptly, and Trees and Vines carefully packed for any place in the country.

A. DELMAS,

The Most Successful and the Best.

NOW COMPLETE AND FOR SALE,

SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.

BY EPES SARGENT, author of "Standard Speaker," &c.

The following are nearly ready:

Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

PHILLIPS, SAMPSON & CO., Boston, Mass.
H. H. BANCROFT & CO.,
v7-6 3m San Francisco, Cal.

Rural Publications.

THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages. Two Dollars per annum. "Without question the BEST Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."

THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.

THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.

SPECIMEN NUMBERS

Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to

LUTHER TUCKER & SON, Albany, N. Y.

☞ Subscriptions for any of the above works received at the offices of the FARMER and forwarded v7-2 tf

FLORA'S DICTIONARY.

BY MRS. E. W. WIRT, OF VIRGINIA.

LUCAS BROTHERS, No. 170 Market street, Baltimore, Md., call the attention of the public to their new splendidly illustrated edition of Mrs. Wirt's Flora's Dictionary. It is a medium quarto, containing two hundred and thirty pages, embellished with a border, and interspersed with upwards of

Five Hundred Wood Engravings!

It is issued in the following styles of binding and illustrations:

Muslin, super extra, gilt edges and full gilt sides, with Eight Groups of Flowers colored from nature.

Morocco, extra, gilt edges and full gilt sides, with Fourteen Groups of Flowers colored from nature.

Turkey Morocco, super extra, gilt edges, with Fifty-Eight Groups colored from nature, illustrating all the flowers named in the book.

Turkey Morocco, ANTIQUE, gilt edges, with Fifty-Eight Groups colored from nature, illustrating all the flowers named in the book.

☞ The above truly superb work is for sale by WARREN & CO., State Society's Rooms, Fourth street, Sacramento; v6-21 3m And 130 Washington street, San Francisco.

The California Farmer.

SAN FRANCISCO, FRIDAY, APRIL 3, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

DEFERRED ARTICLES.—Gardens at the Mission; Gardens at San Leandro; Langerman Garden, and much other matter, we are obliged to defer till another week, that we may give notice for our Panama friends. Sacramento county shall have her share another week, as we have spent a goodly portion of the week there. Sacramento is in her glory now, as to the season; now is the time to visit her. Communications from "Florence Percy," and "Oak," are received and will appear in next Number.

What Shall be Done with Our Surplus Products.

THE prospect of so abundant a harvest as is anticipated for the year '57, in California, is now beginning to excite the attention, not only of all who are producers, but of our wisest business men over the State, for it has most generally been noted that when any branch of business is overdone, it materially affects all the industrial interests connected with it; but however correct this case may be, as a general result, we believe that, as all general rules have their exceptions, in the present case it will prove so with the prospect before our State for the present year.

The peculiar circumstances which have operated to produce the results before us—the abundant rains, the renewal of a planting season, the immense breadth of land planted, the great number of new homes built, and the present remarkable luxuriance of early crops—all of which bespeak one of the most abundant seasons ever known—do not awake in us any fears of unfortunate results; but, on the contrary, they inspire us with hope and pleasure, for we believe "a way will be opened" by which the honest laborer will find an ample reward for his toil, and his earnest efforts be crowned with complete success.

We have often, nay, always observed, when Nature and Providence have seemed to speak for the laborer and to come to his aid by a propitious season, as in the present year by abundant rains, that there was a lesson conveyed, bidding him prepare for great results, and it will be observed that almost spontaneously over our State, even up to the sides of the mountains, more land has been cultivated, more grain sown, and a greater effort made to improve so auspicious a season—and when such admonitions have been obeyed we have observed that a great abundance in one portion of a State, or of the earth, has been followed by a corresponding scarcity and want in some other part of the world. The overflowing, abundant harvest of '46 in the United States was followed by the *Famine of England, Ireland and Scotland.* We ask what would have been the consequences of that immense harvest in the United States, had not the wants of Europe made a demand? Bankruptcy, ruin, and suspension of specie payments must have inevitably taken place had not such "a way been opened," and when the immense number of ships which were built and brought into use for carrying grain to Europe had finished that labor, it was supposed the surplus shipping would bankrupt commercial men; but "a way was opened." The California gold-fields were discovered, and every ship was wanted. The surplus of ships, of produce and of goods all found a market, and so we believe it will be for California the present year. "A way will be opened," and were we asked to say where, we would point to Australia, to China, and to Europe, and facts warrant us in the belief that markets may be and will be found in each and all these places for all we can spare.

The increased population of Australia, for her gold-fields, has not increased the number of her acres of produce, but rather decreased them, while the population has augmented fourfold.

The war in China, ere it has ended, will materially affect her markets and our own, and new sources of trade and new openings will appear not yet observed.

Give to California good clipper ships, and she can place grain and flour in Liverpool as low as they can be shipped from Chicago. This may seem erroneous to some, yet it will be done, and in addition, there will be a larger emigration this spring than many anticipate, both by land and sea, and from Germany and other countries, of a better class, too. They will come as permanent, industrious settlers, come to make their homes with us, and they, for the present, will be *consumers.* With these views and prospects, and many more hopeful ones, we have no fear for California. Her star is in the ascendant, and on no portion of her people will the coming prosperity fall more abundantly than on the WORKING CLASSES. We prophesy a glorious reward for the Industry of California, in the coming years, and we rejoice to herald such news. Then let there be no fear that, because a bounteous Nature has given us the "early and the latter rain," and "seed-time and harvest," that we shall have too great an abundance, but rather let us be grateful for these rich blessings, and believe that "whatever is, is right," that "He doeth all things well," and that for all the bountiful harvest of the coming year "a way will be opened" and the laborer will receive his reward.

BOOK NOTICES.—We have received from Hon. J. B. Weller the Presidents' Messages, a document of much value, and other valuable reports, for which we return our thanks.

Messrs. Fowler & Wells have sent us a Manual of Compositions and Letter Writer, a gem of a book. We are grateful, and shall quote from it hereafter. 'Tis indeed, most valuable.

State Agricultural Society.

THE State Agricultural Society by the action of its members, voted to hold its Annual Fair at the city of Stockton; by a recent meeting of the new Board at Sacramento, some preliminary measures were adopted to prepare for the Annual Fair, which the new Board announce for September 29th. That meeting adjourned to meet on the 1st of May, at Stockton.

It is of the utmost importance that the earliest notice be given of their plans, and a list of the premiums to be awarded, as the friends of Agriculture over the entire State are now making constant inquiry of said plans, etc., we regret to notice much dissatisfaction expressed at the time and place appointed. The lateness of the time will preclude any exhibition of the finest fruits, and the distance of Stockton from some common center, will prevent a large attendance, unless immediate and very active measures are adopted to arouse enthusiasm commensurate with the good that can be accomplished. So much dissatisfaction has been expressed at the action of those who selected the place now appointed, after it had been agreed to hold it at Marysville, that we have been called upon to know if the whole action was not in direct violation of the Constitution? Our only answer, of course, must be an appeal to the Constitution itself. Article VI. reads thus:

"The Society shall hold a Fair and Cattle Show at *such time and place as the* BOARD *shall direct.*"

And we believe had the *Board* alone acted, the Fair would have been appointed at Marysville the coming year.

Much complaint has also been expressed, because there is *no action* of the Society to awake the people of the State to a just and true appreciation of the value of the agricultural products of the State, and to lay their Annual Reports before the Legislature, that action may be had thereon. Delays in these matters are dangerous.

Stockton can be made of easy access, if the citizens do but know their true interests, and take some definite action upon the matter. If the citizens wish the Fair held there, it is high time some public action be had, and if they *do not wish it there,* then say so—for all these delays serve but to make the Show less and poorer; for much that can be grown and manufactured for the Exhibition must be *commenced now;* hence the necessity of that immediate action which we hope will soon show life and activity.

Items at the Capital.

PUBLIC SCHOOL EXAMINATION.—A very interesting exhibition of the Public Schools took place at the Rev. Mr. Benton's Church, on Wednesday evening, in which teachers and pupils participated, much to the credit of each and to the honor of the city. We trust that no event will occur to check the prosperity of our Public Schools in any portion of the State hereafter.

The noted Aubin gas, on trial at the Orleans Hotel, has *gone out,* and the proprietor of that celebrated establishment is now experimenting upon a new kind of gas, made from the common mountain-pine wood.

The Impeachment case is slowly progressing.

E. A. Rowe, the witness in the noted Treasury case of $124,000, was brought on shore as a witness, on Wednesday, to testify as to the whereabouts of the interest money.

Several unfortunate disputes have occurred among officials and persons who *dare* speak by means of the press. Free country this!

Dr. W. G. Hatch, the active and honored Physician of the County Hospital, has made a very favorable report of that Institution.

The deaths in the city of Sacramento during the month of March, were only fifteen—which, in a population of sixteen thousand, less than one to a thousand, shows the superior health of this section of our State.

The Postmaster of Sacramento, in accordance with general orders, has announced that hereafter Spanish quarters and bits will be received at twenty cents and ten cents. We hope all letter writers will pay away this kind of coin and thus get it out of circulation, for when once in the hands of the government it passes to the mint to change its livery and appear with the young eagle's wings.

Rowe's great Pioneer Circus is astonishing the citizens, who crowd the mammoth tent nightly—and the Wizard draws fair audiences at the Forrest theater.

An attempt was made to fire the dwelling of Mr. J. Murphy, on L street, between Fourth and Fifth streets, on Tuesday last, but was early discovered and frustrated.

The Chain Gang are at work upon the streets, which are now indicating an improved business appearance.

DESTRUCTIVE FIRE IN SACRAMENTO.—A fire occurred about one o'clock, P. M., on Wednesday, says the Union, on the north side of E street, between 11th and 12th streets, destroying property estimated at about $20,000. It originated in a frame building 120 feet long, by 52 feet wide, filled with baled hay, about 225 tuns, and speedily communicated with one adjoining of like dimensions, in which were deposited about fifty-five stage coaches and wagons, belonging to the California Stage Company. The hay belonged to Gen. Hutchinson, and the buildings to B. Cahoon; value estimated, $6,000. The loss sustained by the Stage Company in vehicles, harness, etc., is estimated not to exceed $15,000. No cause is assigned for the fire, although it is generally supposed to be the work of an incendiary. The President of the Company, James Haworth, Esq., has offered $1,000 reward for the apprehension and conviction of the person or persons who set fire to the buildings.

"When Doctors Disagree?"

THE following letter from our valued correspondent and former citizen of San Francisco, Dr. C. F. Winslow, we shall lay before our readers. It is a reply to a criticism upon Dr. Winslow's Address, which he delivered before the Legislature, and at Musical Hall in this city. It will be recollected by our readers that Mr. E. F. Brundage and others seemed to ridicule the positions which Dr. Winslow assumed, and ridiculed them as unscientific; we forwarded copies, as in duty bound, to Dr. W., and this is the reply; and it seems also that the Doctor does not shrink from the criticism, or fear being able to make good his position—nor does he fear the "battle of the quill:"

EDITORS FARMER: I see by your paper of January 16th, that I am severely reprimanded and ridiculed by a correspondent, for having had "the presumption" in my discourse on the "Preparation of the Earth for Man," to make the "stupid blunder" of calling the Earth at its beginning—at the time when it became a moving, circling sphere in space—*a globe of incandescent liquid matter.*

I hardly know what to say in reply—if reply be necessary—to such a severe review, as your correspondent has seen fit to inflict on the opening page of the Discourse alluded to.

Had he reviewed with calmness and doubt—(the true method of pursuing scientific research to arrive at exact knowledge)—the idea with which I started, which he now admits to be sound philosophy and "in good working order," I should have assented to the difficulty of arriving at positive knowledge of events which are so mysterious and remote in the history of the Universe. It is only the severest induction which leads philosophy to such conclusions. But when the original liquid condition of this globe, on which we live, and which we can study every day, is called in question in the year 1857, I really do not know what to say, except to refer all your readers to the simplest works of Geology for schools.

I have no disposition, and have not time, to review or criticise any remarks of the correspondent, who has done me so much honor as to ridicule a fact as clearly demonstrated as that the earth revolves on its axis or moves round the sun.

Even the grand speculation of Laplace—a monument, through all time, to the immortal genius of that great astronomer—which, although regarded by many as unstable, and at present being proved to be untrue by the mathematical deductions of Dr. Benj. Pierce, of Cambridge, as I just learn by a letter from his friend Rev. Thos. Hill, of Waltham, even this wonderful effort of the human mind is ridiculed by your correspondent, by being "alloyed with Milton's Paradise Lost."

The object of your correspondent seems rather to be to present his own views, that the globe was solid rock from the time that matter first condensed around its centre, and that it has continued solid throughout, ever since. If he is determined to think so, I have not the slightest objection to his conclusions.

I had no wish to prove any theory in that Discourse, but *to establish the fact,* that God designed the creation of the human soul long before he laid the foundation of the Earth; and that the peaceful pursuits of agriculture and science, during the present geological age, the human epoch, were to be the means of adorning that soul with unusual grace, whereby it would better subserve the purposes of God here, and its own immortality and glory hereafter.

For a critic to seize on a well established fact in science and denounce its existence as impossible, and to *admit* ideas not so clearly proved nor even capable of absolute proof except by induction, makes even this notice of his correspondence unnecessary. The "other errors" to which he alludes, I hope he will do me the justice to present to your readers.

If your correspondent wishes to discuss the facts, conclusions or speculations presented in that address, in a philosophical and tranquil manner, for the purpose of advancing the general interests of science and exact learning, he will not find me unwilling to encounter his pen. Ridicule is neither fact nor argument, and has no force in science and nature. We must deal in exact words and absolute facts—that which is positively known, and conclusions which inevitably spring from such knowledge. I am yours, truly,

C. F. WINSLOW.

TROY, N. Y., March 3d, 1857.

County Fairs.

THE present time is most propitious for awakening an interest in Agriculture, Horticulture, and Floriculture. The earth is putting on her beautiful robes of living green, and decking herself with the jewels of earth's fairest and fragrant flowers. No contemplative mind can go forth in the early morn and inhale the fresh air, or wander at eventide and enjoy the rich scenery that meets you everywhere, and not feel that we have a beautiful country, and should do all we could to draw out the many unrevealed though vast resources of our State; and in no way can it be better done than by the organizing of County Societies, establishing County Fairs, and in the frequent conference and interchange of theoretical and practical experience.

We hope many of our Counties will not let this spring pass, without action. It seems strange to us that so few are cultivating a taste for "rural life." Some Counties have Societies formed, but we want them to increase. We hope the farmers will awake, even if it requires a galvanic battery, to this subject. Where is Yuba? Where Sacramento? Where Napa?

THE SHEEP-SHEARING FESTIVAL.—We trust ere long to be able to give notice officially of the first Sheep-shearing Festival in California, and it should glad the hearts of all to know of so happy an occasion.

Very Important Decision.

THE decision in the case of Billings *vs.* Hall, on Tuesday last, which we copy from the Sacramento Age, will settle a very important question which has long hindered the adjustment of many differences between settlers and owners; and we believe a *settlement of these questions* will do more to restore harmony among men, and tend to improve, build up and increase the prosperity of this country, than any event that could happen. We have noticed all over the State a very kind and honorable disposition shown, in the mass of the settlers, to have these questions settled, and a wish to know how and where they stand, so they can go to work and make a permanent Home, and improve and beautify it:

Supreme Court.—Chief Justice Murray rendered a very important decision on Tuesday last, in the case of Billings *vs.* Hall. Justice Burnett's concurrence was given in a separate opinion, in order to express his views more fully, which was done in the form of twenty-two propositions or maxims. John T. Hall held possession of two lots in this city, for the recovery of which Frederick Billings, of San Francisco, having a title from Gen. Sutter, brought an action of ejectment. The Court below directed the jury to find a special verdict, upon which a judgment was entered for the defendant. Plaintiff appealed. The Supreme Court held that the statute of limitations of 1855, which repeals that of 1850, having been passed eleven days before the expiration of the five years necessary to perfect a title of possession, no absolute rights had vested under the previous act; possessory rights must date from the passage of the latter act. The act of 1856, for the protection of actual settlers and to quiet land titles in this State, bears upon the second point in the case, and is found to be unconstitutional. The Legislature cannot directly pass a law divesting vested rights; neither can it indirectly bring about that end by requiring the owner of the soil to pay for improvements made contrary to his wishes, under forfeiture of his rights. Judgment reversed.

Dr. J. L. Polhemus.

THE name of Dr. Polhemus, or Polhemus' Drug Store, is familiar as household words to every Sacramentan, and to all who have ever known aught of the rise and progress of the "Levee City." Our object in giving sketches of the business men and business houses of Sacramento, is to present those men whose long and permanent residence, and whose energies and wealth have been devoted to the upbuilding of this world-wide known city. It is not our intention to write panegyrics upon men, or to puff their business, but simply to point out prominent citizens to whose labors this city owes her elevation. We shall select those men whose long residence and whose unchanged business likens them to the pillars and corner-stones of some good edifice, that while we gaze at and admire, we, at the same time, honor.

Dr. J. L. Polhemus, we know, can be ranked both as a citizen, as a business man, and in his profession, as one of the corner-stones of Sacramento. Dr. Polhemus has occupied the same store, upon the corner of J and Seventh streets for nearly seven years, amid fires which leveled proud edifices, and floods that left desolation. With losses upon losses, and the various calamities, he has steadily pursued his way onward, giving to his business his whole time, and devoting to this very important profession the whole energies of his mind, so that he could qualify himself to stand at the head of his profession, and we are confident that we can say there is no merchant or business man in the "Levee City" who has been longer, or so long, in one place, with all their business relations unchanged. This is *permanency.* It is upon such men that a government can rely for support in all the matters which tend to build up the institutions of a city or State. It is to old established business men, too, that citizens should and can rely for correct business, and, especially, in the business of the Druggist and Apothecary. Such men are indeed indispensable to a city and community where prosperity is secured by the *health* of its people.

The reputation of Dr. J. L. Polhemus has been established for years, as an educated, skillful, and careful druggist, upon whom a community can with safety rely, and we can with unbounded confidence, commend, far and wide, those friends in the country who require the aid of the Druggist and Apothecary, to this House, whose extensive stock, both in amount and quality, and in prices, will compete with any in the State. The amount of business which has been done and successfully done, amid the calamities of fires and floods, would surprise you. The Doctor is now one of the most prospering Druggists in the State.

PUFF, PUFF, SMOKE, SMOKE—PUFF AWAY. Quite an ingenious plan has been adopted by the celebrated Sutro, at his cigar establishment on Montgomery street, next to Messrs. Barry & Patten's, to show the luxury of smoking. Now we are ignorant of this luxury, as *some* men call it (not being a smoker), and shall probably remain in ignorance during our natural lives, on this subject, but we confess there does seem to be a vast deal of comfort about it, if we should judge by the easy, pleasant and happy manner depicted upon the features of some of those who indulge in the *true Meerschaum*—but to the "smoker." On the left hand of the door of Mr. Sutro's fine store, upon a pedestal stands a Turk, in costume, smoking his dashy pipe, and as easily and gracefully as possible he sends off the smoke (*real smoke*) in little wreathing clouds, as nice as any young gentleman connoisseur could do it; as the crowds go there to look at the haughty Turk, puffing away, we could see the lips of the bystanders move, almost imagining they enjoyed that fine flavored article that is rolled up in the *sausage skins* in the window. Well, every one to their taste! Some will smoke, and smoke—and some will go into *Barry & Patten's*—where—"Oh no, we never mention it;"—but smoke away, smoke away, and like the Turk, you may smoke all day.

To our Panama Readers.

WE hope to greet many friends who are turning their eyes and minds to our golden shores, and as they come to us like "doves returning to their windows," having been wandering for a time from this bright land; or, come they from far-off lands, from the homes of their fathers, to seek a new home and dwell with us forever, we would greet them with a cheerful and happy welcome; and ask them to peruse our special home journal, which we now send to show them that we have a goodly heritage here—"a land flowing with milk and honey"—where the industrious are sure to prosper, and where the earth yieldeth her increase, "sixty and an hundred fold."

We greet you, friends, and ask you to look to our special record, where we point out to you, if you are strangers to our land, some of our Hotels, where you can find a home till you establish one of your own. We show you those Furnishing Warehouses where you can supply that home when ready to receive you, and those other needed aids, where the necessaries and luxuries can be found that will make that home comfortable and happy.

As you come by thousands we greet you, and ask you to come with warm hearts and generous minds, and join the good throng of workingmen, and aid in the upbuilding of our industrious institutions, for it is to these we look, and on these we rely, for the safety, prosperity and perpetuity of this bright and beautiful land.

Come fathers, come mothers, come daughters, sons, friends—all! and come, work in the great vineyard of labor, and you shall sit under your own vine and fig tree, and eat the luscious fruit thereof, with nothing to molest or make you afraid.

FURNISHING WAREHOUSES.

Messrs. Jonas G. Clark & Co.

THIS large and extensive Furniture Warehouse, at 123 Washington street, San Francisco, of which we spoke in our last steamer issue, is deserving of being kept in constant remembrance, not only on account of their immense stock of goods, but on account of the enhanced value it should bear, with every true Californian, from the fact that this house is now manufacturing HERE. They are now converting the trees of the forest into the furniture of our houses, and giving constant employment to scores of mechanics, who depend upon this house for the support of their families. Here is one of the foundation stones of our prosperity as a State. Here we find home manufactures, and home labor, and thus the gold of our hills and mountains is made to build up the homes of our towns and cities, and to make prosperous the whole State. Messrs. Clark & Co., in this noble effort to encourage home manufactures, should receive the earnest encouragement of every well wisher to California; and our hearts glow with warmth of feeling and hope, as we see the beautiful and magnificent furniture of our own mechanics, and the products of our own soil. Citizens, everywhere, should go and see, and know by actual, positive proof, that they can now be supplied with sets of furniture of California manufacture, richer, better and handsomer than they can procure abroad. We speak thus of this house, in behalf of home manufactures, and in aid of our own California mechanics. While the house are thus employed they are obliged to import largely of the best foreign manufacture, until they can increase their facilities for a complete home establishment this side. That time we hope will come, for we regret to see the vast drain of precious metal that goes abroad by these large importations.

The business of this house is conducted also at Sacramento.

Geo. O. Whitney & Co.

This old established Furniture Warehouse is known to our citizens as long as most men have had homes in the Bay City. Messrs. Whitney & Co. are among the largest furniture importers, as their very extensive warehouse will show. Here can be found all that is needed to furn a home. Here every taste can be suited—simple, neat and plain; or, the rich and fashionable make; or, the luxurious and elegant can gratify their costly desires.

Messrs. Whitney & Co., as will be seen by their card, have long had warehouses at San Francisco and Sacramento, and their long experience and extended business acquaintance give them a wide spread influence and consequent trade. Hotels and homes, from the Bay City to the tops of our gold mountains, contain evidences that they have visited the warehouses of this well known firm; and while they are thus popularly and deservedly known, and are receiving so large and prospering a trade, we hope they will give a thought to "home manfactures."

FAMILY GROCERIES.

S. C. Bradshaw & Co.

Are now opening at their new family grocery warehouse, corner of Sansome and California streets, one of the largest and most complete family stores that can be found on this continent. Mr. Bradshaw has been educated to the business, and knows not only all the varied wants of a family, in the thousand little comforts; but he knows those requisites in the varied articles which make them valuable by being economical in their uses in a family; and he knows that the best grocers are always the cheapest for a family, and, knowing this, is prepared to supply them.

Reynolds & Law.

Our up city friends that dwell in the vicinity of Kearny and Jackson streets, must know the firm of Reynolds & Law. Here, *too,* can be found a family grocery, fully able to furnish those needed comforts and luxuries, to add to the happiness of the home. Messrs. R. & L. are widely known as very large dealers in Oregon and California produce—famous for butter, cheese, lard, hams, eggs, fruits, jellies and jams: all the produce of labor from our soil, that rich mine that will never fail so long as man is industrious. Every needed comfort can be at this store, where all who like good things should call.

Messrs. Coddington & Tabor.

We take pleasure also in presenting the names of another long established Family Grocery, where homes can be supplied. Messrs. C. & T. are familiar with their business, and amply able and qualified to know what families want, and how to supply them in the very best manner, and the large number of patrons they have supplied for years can testify to this. It is on such establishments we depend for the best, and are not disappointed.

HOTELS OF THE PACIFIC.

Rassette House.

Those who come to the Pacific shores must not forget this far famed House. A few words only is needed to remind them that Mr. and Mrs. Rassette have one of the few real homes that strangers should seek, till they build their own. While much has been said about the comfort and safety of this truly popular House, we know, from a long residence there, that there is not a safer or more comfortable Hotel on the Pacific shores, and no person can labor harder for the true interests of a House than Joseph Rassette, to whom all praise is due for his untiring exertions in sustaining such a House. Mrs. Rassette has been also indefatigable in her exertions to make her boarders happy. The family parlors are always graced with as happy groups of boarders as any on the Pacific coast.

Oriental Hotel.

The Oriental Hotel, so long and so popularly known, should attract the notice of all Californians. This Hotel is one of the pioneer Hotels, and always, deservedly, a favorite and fashionable House. Messrs. Watriss & Loring are well known, as public caterers of no ordinary stamp. Their long connection with the Astor House, New York, and the Tremont House, Boston, should secure to them hosts of friends.

International Hotel.

This Hotel, under the new administration of the Haleys,

is moving on in a prosperous way, and bids fair to make a distinguished name. It is indeed a fashionable House, and worthy the attention of all travelers.

What Cheer House.

We know of no public house in all California so popular with the masses of the people as the What Cheer House of San Francisco. Woodward is the great caterer for public favor, and any one who visits his Home for the Masses will have proof of his very great success. His Free Reading Room, Free Baths, and his low fare, are winning golden opinions from the whole State.

Dawson House—Sacramento.

This new and splendid structure is now complete in all its arrangements, and crowded with patrons. The Dawson is the largest Hotel on the Pacific shores. Beautiful in design, conspicuous in its position, and finished in a chaste style, it is one of the finest ornaments to the fair City of the Plains. Mr. Dawson is very popular, and wins favor steadily. Mrs. Dawson, by her agreeable manner in the ladies' department, secures to families a home, pleasant and agreeable. Senor Kelly, the ever attentive and courteous clerk, secures additional favor to this leading Hotel of Sacramento county.

Orleans Hotel.

The Orleans Hotel and Mayor Hardenburgh are synonymous terms, and this Hotel has always been the head quarters of legislators, public men, political gatherings, &c., and will always be a popular Hotel so long as Mayor Hardenburgh presides.

ANTELOPE RESTAURANT, SACRAMENTO.—This very excellent Eating House is probably one of the very best places of the kind in Sacramento. Excellent cooks, attentive waiters, and gentlemanly proprietors all tend to secure that neatness, order and cleanliness which should characterize an Eating House. In addition to the eating department they have twenty-four fine rooms for lodgings, as neatly furnished as any hotel, and private dining and party saloons, upstairs, where they attend to their patrons. We can add, also, that when off duty, as page in the Senate, Jake is, as usual, in attendance, and is one of the most polite young fellows we ever saw in a saloon. Go, by all means, and patronize the Antelope.

SPECIAL NOTICES.

☞ **OXYGENATED BITTERS.**—*The annexed statement of Prof. A. A. Hayes, M. D., State Assayer, is ample testimony of the scientific manner in which this medicine is compounded, and recommends it to the Professional Men.*

An opinion having been asked for of me, in consequence of the formula for preparing Oxygenated Bitters being known to me, I express in the following form:

The composition of these Bitters includes those medicinal substances which experienced physicians have long resorted to for special action on the system, when deranged by Fevers, Dyspepsia, Agues and General Debility, resulting from exposure or climate influence.

These are rendered permanent, and remain active in this preparation *as a consequence of the scientific manner in which they are combined.*

It is a well founded inference, that the preparation, used in larger or smaller doses, would prove a valuable *General Medicine*, which experience has demonstrated.

In this medicine, no metallic salts can be found, by the most delicate chemical trials.

Respectfully, A. A. HAYES, M. D.,
Assayer to the State of Mass.

No. 1 Pine street, Boston, 16th Dec., 1852.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their Agents everywhere.

Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 11-1m

☞ **FLAX SEED.**—We have just received several cases of very superior Flax Seed, from the East. It is of very superior quality; and there is no doubt but it can be grown here more successfully than in any other State in the Union. We really hope many will be induced to try this most valuable article. We are ready to furnish all who would like to try it as an experiment, with small parcels, *free*, if they will try it carefully. Those making it a business can be supplied in large quantities. WARREN & CO.,
v7-10 130 Washington street, San Francisco.

☞ **TO STOCK RAISERS.**—We earnestly invite stock raisers of all kinds to advise with us and give us information in regard to such stock as they may have for sale, and all the particulars of price, quality, &c. We are often inquired of relative to such matters, and can always find purchasers for almost all kinds of extra stock. Valuable stock will always sell; and we intend to keep a register of all such stock as may be in market, and assist in finding purchasers for it, and to do everything in our power to further the breeding of good stock.
v7-10 WARREN & CO.

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

BOOKS FOR GARDENERS.

JUST received, at the office of the FARMER, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

☞ **READ—Copies of the Farmer for Mailing.** That all may have an opportunity of sending the FARMER to their friends in the East, so as to make known the resources of California, we have

Reduced the price to Twelve and a-half Cents per Copy.

It will hereafter be found at the following places:

J. W. SULLIVAN, ULLMAN & Co., } Post Office Arcade.
NOISY CARRIER'S, Long Wharf
HUTCHINGS & ROSENFIELD, Montgomery street.
BOOK STORE, corner of Clay street and the Plaza.

At these places can also be found copies of the State Society's Reports. Price 50 cents.

The FARMER will also be had ready for mailing at all times at the office, at $1 50 per dozen; also single copies.

WARREN & CO., Editors and Proprietors.

A CARD.

☞ THE Report of the Agricultural Society, for the year 1856, including the full Reports of the Visiting Committees to the Farms and Vineyards throughout the State, Reports on the Exhibition, the Annual Address of the President, Address of Col. J. B. Crockett, detailed list of the Exhibited Articles, the Prize Essay on the Potato, with other important matter, is now issued in a neat Pamphlet of about eighty pages, illustrated. Persons desirous of obtaining copies will please address the Office of the CALIFORNIA FARMER, when copies will be forwarded as per order. Price Fifty Cents

For sale at the Offices of the CALIFORNIA FARMER, State Agricultural Society's Rooms, Sacramento—and at No. 139 Washington street, San Francisco. Also, at Ullman & Co's., J. W. Sullivan's, J. J. LeCount's, San Francisco; Dr. J. C. Cobb, and J. B. Manny, San Jose.

DR. H. S. BURGESS, DRUGGIST.—We take pleasure in noting the large and handsome establishment of Dr. Burgess, on J street, directly opposite the Public Plaza on which the capital is to be built. Dr. Burgess, for a young man, has accomplished more than is usual, or can be done under the vicissitudes of such fates as have befallen Sacramento. Commencing business in 1852, he steadily devoted himself to a knowledge of his business and profession, and his march has been onward. In July, 1856, Dr. Burgess erected a handsome brick edifice 24x80—fire-proof—at a cost of about $6,000 or $7,000, which is now established with a large and valuable stock of all these goods so necessary for a large druggist and apothecary establishment; and we are happy to note the fact of a large and prosperous business. Dr. Burgess having been so long in the business, and making it a study and profession, he becomes one of those reliable and permanent fixtures of a city—one of her reliable citizens upon whom a community can build up her institutions, relying upon such for a support. To such men as Dr. Burgess the community can again turn with confidence when they depend upon him in his profession. This establishment shows the evidence of prosperity.

EARLY STRAWBERRIES.—Through the kindness of Mr. J. A. Wolf, we received a box of delicious Strawberries, raised in the garden of Messrs. Wolf & Lusk, at the rural city of Oakland. They are the British Queen and Longworth's Prolific varieties, and, we learn, are from plants set out this year. One of them is nearly a feast, the largest measuring three and a half by three inches in circumference. We mentioned this garden last week as belonging to Mr. Lusk, omitting the name of the firm. They will have a large crop this year, and we wish them an abundant income.

BLOTCHES on the Skin, Eruptions, and all Cutaneous Diseases, will find an infallible remedy in Holloway's Ointments and Pills; if the Ointment be rubbed on the parts affected, the blotches will disappear. It will cure wounds of even twenty years' standing. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot or box.

OXYGENATED BITTERS.—We hear of fresh triumphs every day from the use of Oxygenated Bitters. The cures it is effecting on every side are without precedent. People who have suffered from Dyspepsia from years have been entirely relieved by a few bottles.

New Flower Seeds.

A superior lot of very choice Flower Seeds—many rare kinds—just received from a Boston house. Persons wishing any of them can procure them by calling at our Office, 130 Washington street, San Francisco; or address by letter marked "Seed Order," and it will be promptly attended to. [7-11] WARREN & CO.,

Sugar Beet Seed.

WE have received a lot of very superior French Sugar Beet Seed. It is of extra quality, new and fresh, and imported expressly for trials of beet raising for sugar making. Persons who desire a superior article can order by express, and the seed will be carefully forwarded. Such orders should be addressed to our office at San Francisco, superscribed "Seed Order." [v7-11] WARREN & CO.

Hemp Seed.

SUPERIOR Hemp Seed, just received. No country in the world can surpass California in the production of this article.

For sale at our Office 130 Washington street, San Francisco.

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral duty*, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for oursel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered unassurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promotes habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom then will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,346 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

NORTHERN ASSURANCE COMPANY,
For Fire and Life Assurance at Home and Abroad.
Established in 1836—Incorporated by Act of Parliament.
Capital £1,250,700 Sterling.
Annual premium for an assurance of $100 on a single life:

THE INAUGURAL ADDRESS

Of James Buchanan, President of the United States,

On the occasion of his Inauguration into office at the Capitol, at Washington, March 4th, 1857.

FELLOW CITIZENS: I appear before you this day to take the solemn oath that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect and defend the Constitution of the United States. In entering upon this great office, I must humbly invoke the God of our fathers for wisdom and firmness to execute its high and responsible duties in such a manner as to restore harmony and the ancient friendship among the people of the several States, and to preserve our free institutions throughout many generations. Convinced that I owe my election to the inherent love for the Constitution and the Union which still animates the hearts of the American people, let me earnestly ask their powerful support in sustaining all just measures calculated to perpetuate these, the richest political blessings which Heaven has ever bestowed upon any nation. Having determined not to become a candidate for re-election, I shall have no motive to influence my conduct in administering the Government except the desire ably and faithfully to serve my country and to live in the grateful memory of my countrymen.

We have recently passed through a Presidential contest in which the passions of our fellow citizens were excited to the highest degree by questions of deep and vital importance; but when the people proclaimed their will, the tempest at once subsided, and all was calm. The voice of the majority, speaking in the manner prescribed by the Constitution, was heard, and instant submission followed. Our country could alone have exhibited so grand and striking a spectacle of the capacity of man for self-government. What a happy conception, then, was it for Congress to apply this simple rule, that the will of the majority shall govern, to the settlement of the question of domestic slavery in the Territories! Congress is neither to legislate slavery into any Territory or State, nor to exclude it therefrom; but to leave the people thereof perfectly free to form and regulate their domestic institutions in their own way, subject only to the Constitution of the United States as a natural consequence. Congress has also prescribed that when the Territory of Kansas shall be admitted as a State, it shall be received into the Union with or without slavery, as their Constitution may prescribe at the time of their admission. A different opinion has arisen in regard to the time when the people of a Territory shall decide this question for themselves. This is happily a matter of but little practical importance, and besides, it is a judicial question, which legitimately belongs to the Supreme Court of the United States, before whom it is now pending, and will, it is understood, be speedily and finally settled. To their decision, in common with all good citizens, I shall cheerfully submit, whatever this may be, though it has been my individual opinion that under the Nebraska-Kansas act the appropriate period will be when the number of actual residents in the Territories shall justify the formation of a Constitution with a view to its admission as a State into the Union. But, be this as it may, it is the imperative and indispensable duty of the Government of the United States to secure to every resident inhabitant the free and independent expression of his opinion by his vote. This sacred right of each individual must be preserved. This being accomplished, nothing can be fairer, than to leave the people of a territory free from all foreign interference to decide their own destiny for themselves, subject only to the Constitution of the United States. The whole territorial question being thus settled upon the principle of popular sovereignty—a principle as ancient as free government itself—everything of a practical nature has been decided, and no other question remains for adjusting, because all agree that under the Constitution slavery in the States is beyond the reach of any human power, except that of the respective States themselves wherein it exists. May we not then hope that the long agitation on this subject is approaching its end, and that the geographical parties to which it has given birth, so much dreaded by the Father of his Country, will speedily become extinct. Most happy will it be for the country when the public mind shall be diverted from this question to others of more pressing and practical importance. Throughout the whole progress of this agitation, which has scarcely known any intermission for more than twenty years, while it has been productive of no positive good to any human being, it has been the prolific source of great evils to the master, to the slave and to the whole country; it has alienated and estranged the people of the sister States, from each other, and has even seriously endangered the very existence of the Union. Nor has the danger yet entirely ceased. Under our system there is a remedy for all mere political evils in the sound sense and sober judgment of the people. Time is a great corrective. The political subjects which but a few years ago exasperated the public mind, have passed away and are now nearly forgotten; but this question of domestic slavery is of far greater importance than any mere political question, because, should the agitation continue, it may eventually endanger the personal safety of a large portion of our countrymen where the institution exists. In that event, no form of government, however productive of material benefits, can compensate for the loss of peace and domestic security around the family altar. Let every Union-loving man, therefore, exert his best influence to suppress this agitation, which, since the recent legislation of Congress, is without any legitimate object. It is an evil of the times that men have undertaken to calculate the mere material value of the Union.

Reasoned estimates have been presented of the pecuniary profits and local advantages which would result to different States and sections from its dissolution, and of the comparative injuries which such an event would inflict on other States and sections. Even descending to this low and narrow view of the mighty question, all such calculations are at fault. The bare reference to a single consideration will be conclusive on this point.

We at present enjoy a free trade throughout our extensive and expensive country, such as the world never witnessed. This trade is conducted on railroad and canals, on noble rivers and arms of the sea, which bind together the North and the South, the East and the West of our confederacy. Annihilate this trade, arrest its free progress by the geographical lines of jealous and hostile States, and you destroy the prosperity and onward march of the whole and every part, and involve all in one common ruin.

But such considerations, important as they are in themselves, sink into insignificance when we reflect on the terrific evils which would result from disunion to every portion of the Confederacy—to the North not more than to the South, to the East not more than to the West. These I shall not attempt to portray, because I feel an humble confidence that the kind Providence which inspired our fathers with wisdom to frame the most perfect form of government and union ever devised by man, will not suffer it to perish until it shall have been peacefully instrumental by its example, in the extension of civil and religious liberty throughout the world.

Next in importance to the maintainance of the Constitution and the Union is the duty of preserving the Government free from the taint or even the suspicion of corruption. Public virtue is the vital spirit of Republics, and history proves that when this has decayed and the love of money has usurped its place, although the forms of free government may remain for a season, the substance has departed forever. Our present financial condition is without a parallel in history. No nation has ever before been embarrassed from too large a surplus in its Treasury. This almost necessarily gives birth to extravagant legislation. It produces wild schemes of expenditures and begets a race of jobbers and speculators whose ingenuity is exerted in contriving and promoting expedients to obtain the public money. The party, through its official agents, whether rightfully or wrongfully, is suspected, and the character of the Government suffers in the estimation of the people. This is in itself a very great evil. The natural mode of relief from this embarrassment is to appropriate the surplus in the Treasury to great national objects for which a clear warrant can be found in the Constitution. Among these I might mention the extinguishment of the public debt, a reasonable increase of the Navy, which is at present inadequate to the protection of our vast tonnage afloat—now greater than that of any other nation—as well as the defence of our extended sea coast. It is beyond all question the true principle that no more revenue ought to be collected from the people than the amount necessary to defray the expenses of a wise, economical and efficient administration of the Government. To reach this point, it was necessary to resort to a modification of the tariff, and this has been accomplished in such a manner to do as little injury as may have been practicable to our domestic manufactures, especially those necessary for the defense of the country. Any discrimination against a particular branch for the purpose of benefiting favored corporations, individuals, or interests, would have been unjust to the rest of the community and inconsistent with that spirit of fairness and equality which ought to govern in the adjustment of a revenue tariff—but the squandering of the public money sinks into comparative insignificance, as a temptation to corruption, when compared with the squandering of the public lands.

No nation in the tide of time has ever been blessed with so rich and noble an inheritance as we enjoy in the public lands. In administering this important trust, while it may be wise to grant portions of them for the improvement of the remainder, yet we should never forget that it is our cardinal policy to reserve these lands as much as may be for actual settlers, and this at moderate prices. We shall thus not only best promote the prosperity of the new States, by furnishing them a hardy and independant race of honest and industrious citizens, but shall secure homes for our children, as well as for those exiles from foreign shores who may seek in this country to improve their condition and to enjoy the blessings of civil and religious liberty. Such emigrants have done much to promote the growth and prosperity of the country. They have proved faithful both in peace and in war. After becoming citizens, they are entitled, under the Constitutions and laws, to be placed on perfect equality with native-born citizens, and in this character they should ever be kindly recognized.

The Federal Constitution is a grant from the States to Congress of certain specific powers, and the question whether this grant shall be liberally or strictly construed, has, more or less, divided political parties from the beginning. Without entering into the argument, I desire to state at the commencement of my administration, that long experience and observation have convinced me that a strict construction of the powers of the Government is the only true as well as the only safe theory of the Constitution. Whenever, in our past history, doubtful powers have been exercised by Congress, they have never failed to produce injurious and unhappy consequences. Many such instances might be adduced if this were the proper occasion. Neither is it necessary for the public service to strain the language of the Constitution, because all the great and useful powers required for a successful administration of the Government, both in peace and in war, have been granted either in express terms or by the plainest implication. While deeply convinced of these truths, I yet consider it clear that under the war-making power, Congress may appropriate money towards the construction of a military road when this is absolutely necessary for the defense of any State or Territory of the Union against foreign invasion. Under the Constitution, Congress has power to declare war, to raise and support armies, to provide and maintain a navy, and to call forth the militia to repel invasion. Thus endowed in an ample manner with the war-making power, the corresponding duty is required that the United States shall protect each of them (the States) against invasion. How is it possible to afford this protection to California and our Pacific possessions except by means of a military road through the territory of the United States, over which men and munitions of war may be speedily transported from the Atlantic States to meet and repel the invader?

In case of a war with a naval power much stronger than our own, we should then have no other available access to the Pacific Coast, because such a power would instantly close the route across the Isthmus of Central America. It is impossible to conceive that while the Constitution has expressly required Congress to defend all the States, it should yet deny to them, by any fair construction, the only possible means by which one of these States can be defended. Besides, the government, ever since its origin, has been in the constant practice of constructing military roads. It might also be wise to consider whether the love for the Union which now animates our fellow-citizens on the Pacific Coast may not be impaired by our neglect or refusal to provide for them, in their remote and isolated condition, the only means by which the power of the States on this side of the Rocky Mountains can reach them in sufficient time to protect them against invasion.

I forbear, for the present, from expressing an opinion as to the wisest and most economical mode in which the Government can lend its aid in accomplishing the great and necessary work. I believe that many difficulties in the way, which now appear formidable, will, in a great degree, vanish as soon as the nearest and best route shall have been satisfactorily ascertained.

It may be right that, on this occasion, I should make some brief remarks as to our rights and duties as a member of the great Family of Nations. In our intercourse with them, there are some plain principles approved by our own experience, from which we should never depart. We ought to cultivate peace, commerce, and friendship with all nations, and this not merely as the best means of promoting our own national interest, but in a spirit of Christian benevolence toward fellow-men, wherever their lot may be cast. Our diplomacy should be direct and frank, neither seeking to obtain more nor accepting less than is our due. We ought to cherish a sacred regard for the independence of all nations, and never attempt to interfere in the domestic concerns of any, unless this shall be imperatively required by the great law of self-preservation. To avoid entangling alliances has been a maxim of our policy ever since the days of Washington, and its wisdom no one will attempt to dispute. In short, we ought to do justice in a kindly spirit to all nations, and require justice from them in return.

It is our glory that while other nations have extended their dominions by the sword, we have never acquired any territory except by fair purchase, or, as in the case of Texas, by the voluntary determination of a brave kindred, and independent people to blend their destinies with our own. Even our acquisitions from Mexico form no exception. Unwilling to take advantage of the fortune of war against a sister Republic, we purchased these possessions under the treaty of peace for a sum which was considered at the time a fair equivalent. Our past history forbids that we shall in the future acquire territory unless this be sanctioned by the laws of justice and honor. Acting on this principle, no nation will have a right to interfere or to complain if, in the progress of events, we shall still further extend our possessions. Hitherto, in all our acquisitions, the people under the protection of the American flag have enjoyed civil and religious liberty, as well as equal and just laws, and have been contented, prosperous and happy. Their trade with the rest of the world has rapidly increased, and thus every commercial nation has shared largely in their successful progress. I shall now proceed to take the oath prescribed by the Constitution, while humbly invoking the blessing of Divine Providence on this great people.

JAMES BUCHANAN.

Young Ladies' Seminary, Benicia.

MISS MARY ATKINS, : : : : : : PRINCIPAL.

THE School Year of this Institution is divided into two terms of five months each; but the term commencing January 5, 1857, will close May 1st, 1857, in order that the semi-annual vacations may take place hereafter in May and October.

At the close of each term there will be a thorough examination of the pupils in all of their studies.

The Course of Instruction is such as is usually pursued in High Schools, and also includes the accomplishments of Drawing, Painting, Vocal and Instrumental Music.

The government of the school is gentle, but decided. A daily account of the recitations and deportment of each pupil is sent, monthly, to the parents, who are thus regularly informed of the progress of their daughters.

All of the pupils board either with their parents or at the seminary, and are under the special care of their parents, or of the teachers of the Institution.

The School is open to inspection at any time, and friends are cordially invited to visit it; but no pupils can receive calls from any persons, excepting those introduced by the parents and guardians to the principal.

TERMS: PER MONTH.

Tuition in the Higher English Studies	$8 00
" " Common " "	6 00
" " Music and use of Instrument	10 00
" " Ancient and Modern Languages	5 00
" " Drawing and Painting	4 00
For Board (per week)	6 00
For Washing (per session)	25 00

No extra charge will be made for Vocal Music or Embroidery: neither are the pupils required to furnish their rooms, bedding, &c.; but each pupil must have every article of clothing distinctly marked with her name.

Payments are to be made invariably at the beginning and middle of each term, in advance.

Sale of the Superior Shorthorn Herd

OF THE LATE

NOEL J. BECAR.

To the Editors of the California Farmer:

DEAR SIRS: I wish to communicate through your columns, to the Breeders of Shorthorns, that I have been authorized, by the executors of the late Noel J. Becar, to dispose of his entire herd of far famed Shorthorns. We have also determined not to sell a single animal from that herd until JUNE, 1857, on the day of my annual sale, which generally takes place about the 20th.

Many inquiries have been made by letter, and otherwise, and I take this course to answer previous and future questions. A very full and explanatory Catalogue will be issued in due time, and very generally circulated to all my present correspondents, and as many others as may desire it.

L. G. MORRIS.

Mt. Fordham, Westchester, N. Y., December, 1856 } v7-4

PROSPECTUS

OF

VOLUME VII.

OF THE

CALIFORNIA FARMER.

THE CALIFORNIA FARMER was established in January, 1854; its success was a problem that the future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the virgin soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer FARMER expected to meet with obstructions, trials and difficulties, that would try our strength and temper too. But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he must meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—so our humble selves in the enterprise of the journal we then presented, we had faith—we were willing and ready to labor and toil—to do and to suffer—confident that ere long the goodness of the cause we had espoused, its happy and beneficial influences, with dignity, nobility, and prosperity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good—to them we and our cause are known—our desert at their hands is manifest.

To those who are strangers to us and the journal we publish, we again present the CALIFORNIA FARMER.

Our journal is devoted to Agriculture and all the useful sciences—it will ever be our aim to have the Farmer the true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the TRUE friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Homes of our glorious State. Free from every political, sectarian, or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that our means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication, we have access to facilities for information rarely obtained.

In the department of Education, of Home Influences, we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artisans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall esteem most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it in comparison, and abide the issue.

With grateful acknowledgments for a generous sustaining in years of trial, and with the assurance to our patrons of many improvements in the opening year, we ask their continued favor and generous influence for this journal.

The terms of the FARMER are, for the year (always in advance), $5.

Offices of Publication—130 Washington street, San Francisco, and State Society's Rooms, Fourth street, Sacramento. WARREN & CO., Editors and Publishers.

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,

SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

J. L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

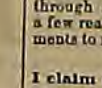
We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

PACIFIC MUSEUM,

Corner of Clay and Kearny streets.

INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!



THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Wurf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.

Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montez.

☞ A full Brass Band is in attendance every evening. Open every day and evening (Sundays excepted).

*** Admission 25 cents during the Day, and 50 cents in the Evening. v7-2

MEDICINES, &c.

SANDS' SARSAPARILLA,

FOR PURIFYING THE BLOOD,

AND FOR THE CURE OF

Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the STOMACH, the CIRCULATION, and the BOWELS, and thus three processes, which are ordinarily the result of THREE different kinds of medicine, are carried on at the same time through the instrumentality of THIS ONE remedial agent. Its great merit is, that it meets and NEUTRALIZES the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.

LYNN COUNTY, Oregon Ter., March 11, 1853.

Messrs. A. B. & D. SANDS, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted, and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 3d of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but perseveringly with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were reduced, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swellings in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor, as all our neighbors will certify.

Yours, respectfully,

CALEB DAVIS.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

ROMAN EYE BALSAM,

FOR INFLAMED EYE-LIDS.

The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eye-lid evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.

READ THE FOLLOWING EVIDENCE.

NEW YORK, July 15, 1856.

Messrs. A. B. & D. SANDS: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your ROMAN EYE BALSAM, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years.

Yours, &c.,

G. B. WILLIAMS, 262 BROADWAY.

PRICE, 25 CENTS PER JAR.

The Farmer's Drill.

[PATENTED, AUGUST, 1853.]

THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct. 28th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.

Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.

This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.

For full particulars address

The New Guano Islands.

By the arrival of the bark Yankee, with dates from Honolulu to March 12th, we learn of the success of the expedition sent from that place for guano. As this will probably be of importance to California in the future we extract the following account of it from the Commercial Advertiser (Honolulu):

ARRIVAL OF THE SCHOONER LIHOLIHO WITH 100 TONS OF GUANO.—The arrival of the fine schooner Liholiho, Capt. John Paty, on Saturday, with about a hundred tons of guano, from Jervis and New Nantucket Islands, caused no little excitement in our town. When the expedition sailed, on the 25th of December, no one appeared to take much interest in it, further than to express a general denunciation of all humbugs.

The appearance of the specimens of guano which we have seen is that of a fine powder, very much resembling snuff, without the strong smell of ammonia which the Chincha guano has. Under a microscope, it appears entirely composed of crystalized substance, and resembles snow. Good judges pronounce it to be first quality guano, but what its value is, compared with Chincha guano, remains to be determined. About eight tons of this guano goes forward by the bark Yankee, to be sent on by the mail steamer via Panama, to New York, the object being to land it in New York as soon as possible. The balance is being shipped on the clipper ship Aspasia, to New York direct, and will reach that port about July 25.

The vessel was ten days from Honolulu to the Islands, and the same number of days loading, which was effected with whale-boats.

On the 29th of January, they sailed for Howland's Island, where they arrived on the 5th of February, landed, brought off a sample of the deposit, and set sail next day.

They saw New Nantucket on the 9th of February, a low island, which, as they approached, gave faint signs of vegetation, in the shape of dry grass and dead bushes on the water's edge. They landed on the 10th, and were agreeably surprised to find the entire surface of the island not only destitute of vegetation, but affording a vast deposit of guano of the very best quality. The Liholiho being already well down in the water and somewhat leaky, only seventy-four bags of this guano were taken on board. The passage to Honolulu was made in twenty-three days, reckoning from the 12th of February until the 7th March. Absence from Honolulu 71 days.

The usual course of the wind was from the N. E. or S. E.; and although the voyage was made in mid-winter, the weather was mild, excepting the great heat on shore at mid-day. The currents appeared to change with the changes of the moon, from the westward or eastward, and from one to one and a half miles an hour. The landing might perhaps be considered difficult by inexperienced persons, but it appears to have presented no obstacle to our enterprising voyagers.

The Agent of the Company, Mr. A. Benson, erected upon each island a flag-staff, upon which now floats the American flag, and each island has on it a small house for the protection of the property of the Company as well as a general caveat against all intruders. One great drawback to these guano islands, is the want of fresh water, not a drop of which is anywhere to be found. Rain seldom falls, as appears by the very dry condition in which they found the guano as deep as four or five feet below the surface.

Birds, eggs and fish are in such abundance as almost to stagger our faith in human testimony. At times, the birds were so thick as actually to cloud the atmosphere, and it was almost impossible to step without treading on the nests. Altogether, it seems, these islands are by all accounts, a wonderful place.

Eastern News.

THE steamer John L. Stephens, Capt. R. H. Pearson, arrived here on the 29th, with dates from New York and New Orleans, to March 5th, and bringing 773 passengers, including 278 U. S. troops—all well.

The railroad being in excellent order, the passengers crossed the Isthmus in three hours.

The U. S. sloop of war Cyane still remains at Aspinwall, and the U. S. frigate Independence and sloop of war Decatur are at Panama, to insure passengers safe transit across the Isthmus.

THE INAUGURATION.—Mr. Buchanan was inaugurated with great ceremony on the 4th of March, and delivered his address before an enormosns congregation of all the distinguished people of the country, foreign representatives, etc. The address is one of more than ordinary excellence, and will be found in our columns.

On the conclusion of the ceremonies President Buchanan entered upon the occupancy of the White House, where Miss Lane, his niece, is to play the part of hostess.

Mr. and Mrs. Pierce remain in Washington, domiciled with Governor Marcy.

THE CABINET.—Secretary of State, Lewis Cass, of Mich.; Secretary of Treasury, Howell Cobb, of Ga.; Secretary of the Interior, Jacob Thompson, of Miss.; Secretary of Navy, Aaron V. Brown, of Tenn.; Secretary of War, J. B. Floyd, of Va.; Postmaster General, Arnold Plummer, of Pa.; Attorney General, Nathan Clifford, of Me.; Assistant Secretary of State, Henry Ledyard, of Ia.

The President has appointed James Buchanan Henry his Private Secretary.

CONGRESSIONAL MATTERS.—The Senate passed a bill directing the Postmaster General and the President to make a contract for a line of telegraph between Washington and San Francisco.

An amendment to the Post-office Appropriation Bill, providing for the transportation of letter mail in coaches from the Mississippi to San Francisco, was adopted and the bill finally passed. The appropriation is $600,000

A Postal Treaty with France has just been concluded. Under the provision of the treaty the postage to and from France and the United States will be fifteen cents for the one-fourth ounce, doubled and proportionably increased for every additional one-fourth ounce or fraction thereof. Pre-payment optional.

Among the passengers who left for California was Capt. Underwood, U. S. A., of the Fourth Regiment. This regiment returns immediately over the Plains, by orders of the War Department, to make one of the new wagon roads.

It is stated that the very decided position President Buchanan takes in his inaugural in favor of the speedy construction of the Pacific railroad, gives form to the rumor that he intends to make this one of the prominent features of his administration.

California 7's, 1857, are quoted at 65 cents on the dollar, at New York.

The Tea-growing experiment in South Carolina is said to be a failure, owing more to the high prices of labor, and the impossibility of competing with the pauper labor of China, than any defect in the climate and soil.

THE SHIPS OF THE PLAINS.—The camels which have been imported by the U. S. Government, to be used upon the plains which lie between the Eastern and Western ocean, for the carrying of the mails, are reported to be in the care of a Company of the Second Cavalry, in Texas, and in most excellent condition. A Texas paper, speaking of the subject, says, that it has already been ascertained that more can be done by six camels in five days, than by two six-mule teams in ten days. The camels make a trip from Camp Verde to San Antonio, sixty miles, and back, in six days, with more loading than the two wagons possibly could carry; and the wagons usually take ten or twelve days for the trip.

APPROPRIATIONS FOR CALIFORNIA.—California was liberally dealt with by the Congress recently adjourned. The Telegraph Bill gives $300.000 per annum for ten years, to aid in constructing a Telegraph to San Francisco; $600,000 per annum for a semi-weekly Overland Mail, or $450,000 for a weekly, or $300,000 for a semi-monthly mail; $800,000 for Fortifications on the Pacific, $400,000 for the Navy Yard; and upwards of $500,000 for the Post Office, Indian Department, etc.

SHASTA COUNTY.—The planting season, says the Shasta Republican, is now entirely over with our farmers. We are informed by those living east of the Sacramento river, that the fields generally give promise of abundant crops. The Spring has opened as favorably for the agriculturist as could have been hoped.

ON and after Monday next, 6th inst., the pay of the California Legislators will be but $5 per diem.

WAGON ROAD.—A Convention has been called, by some of the members of the Legislature and of all persons favorable to the construction of the Emigrant Road, by way of the Big Tree route, to the southern counties, to take place at Mokelumne Hill, Calaveras county, on 2d of May next.

LAUNCH OF A STEAMER AT STOCKTON.—A new steamer was launched at Stockton, last Wednesday, before a large number of spectators. She is called the Eureka, and is intended for the Stockton and Sacramento vegetable trade, but will also be fitted up for the accommodation of passengers traveling between these two cities. The Eureka is expected to have her boiler and engine fixed, and made all ready for the route, in the coming week.

NEW STEAMER FOR PETALUMA.—The Petaluma Steamboat Company propose building a first class steamer that will make a trip from San Francisco to Petaluma, and back, in one day. She is to be 130 feet in length, 26 feet breadth of beam, 7 feet depth of hold, and be propelled by double engines.

U. S. LAND OFFICE.—Col. Gift has leased the rooms in the north side of Lucas, Turner & Co.'s building, at the corner of Montgomery and Jackson streets, which he is fitting up for the purpose of a Government Land Office—having removed from Benicia to this city.

PACIFIC IMMIGRANT AID ASSOCIATION.—At a meeting of the Board of Directors, held this day, the following officers were elected for the ensuing year: Jacob R. Snyder, President; John Sime, Vice President; Jules David, Treasurer; Joseph S. Wallace, Recording Secretary; J. H. Purkitt, Corresponding Secretary.

APPOINTMENTS.—The Governor has appointed Alexander G. Abel, Commissioner of Immigration, and George W. Ryder, Guager of Wines and Liquors, for this city.

RATES OF FARE.—The rates of fare by the J. L. Stephens, to sail on Monday, are as follows: First cabin, $250; second cabin, $150; steerage, $100.

TREASURE.—The export of treasure from the port of San Francisco, during the past three months, amounts to $10,288,546.

PASSENGERS.—During the months of January, February and March, there arrived at this port, by sea, 5,745 passengers, and 3,562 departed—leaving a net gain of 2,183.

☞ **BEAUTIFUL GIFT.**—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

N. B.—Any of the above named articles can be had at our branch store at Marysville. v7-9 tf

The Great Stump Puller.
WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:
The Orange Improved Stump Machine.
Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!
My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.
It is a good *ROCK MACHINE.* It moves massive rocks, many tons weight, with perfect ease.
It is the best machine to *MOVE BUILDINGS,* ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.
The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.
Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!
It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.
The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO.

New Cultivator.
THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measures operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who wish finely cultivated soil it has no equal.
Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.
All persons are invited to call at the workshop and examine it.
v7 5 3m R. BEECHING, Manufacturer,
35 Pine street, San Francisco.

Hydraulic Hose and Pipes.
A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. Globe Pattern Rubber Stocks, with and without Steel Rings. The whole coupling together in the most thorough workman-like manner complete for use placing in the hands of miners the most valuable gold washing apparatus ever yet introduced into the mining regions, and one which is destined to do more for the development of our mountain treasures, than all others yet introduced.
Orders per Mail or Express promptly executed.
BRYANT & CO., 63 Battery street.

v6-9 90 J street, Sacramento.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.
THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid.* Description and directions for culture furnished with each package.
NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.
Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.
Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

CHINESE SUGAR CANE,
OR,
SORGHO SUCRE.
PURE SEED.
THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:
First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.
Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.
Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.
This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 30 each, or at $1, if sent by express, freight unpaid.
Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.
A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.
Address, with plain directions for mailing or shipping,
W. P. ORME, Atlanta, Georgia.
ATLANTA, November 7, 1856. v6-22

THE LAW OF NEWSPAPERS.
1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.
2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.
3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.
4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.
5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.
☞ Postmasters would oblige, by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.
Postage of the Farmer.—The Postage of the FARMER to any part of the State is only 6½ cents per quarter, or 26 cents per year. This is the lawful postage established by Congress and when more is exacted it is a violation of law

Sheep Raising, &c.

SACRAMENTO, March 28th, 1857.

EDITORS FARMER: To argue in favor of the excellency of our climate, grasses and pasture range for the breeding of all descriptions of domestic animals, will be superfluous. That no country on the globe surpasses it for such purpose, is known to all who know anything of California. A large extent of country, however, being hilly and mountainous, and mostly covered with herbage, that is, in the coast range and contra-coast range, is peculiarly adapted to sheep raising; in fact, fit for but little else. Were I to select a sheep ranch, my preference would be somewhere north of the Bay of San Francisco—say in the upper portions of Sonoma county, or Mendocino, where in the vicinity of the ocean the bunch and other grasses are green the year through.

In July 1852, I was with an exploring and hunting party in the mountains west of Colusi, and on to the head waters of Eel river. Away in the fastnesses of these ranges, where no wheeled vehicle will ever go, and with great difficulty a horse can enter, we found some splendid sheep pasturage. For weeks previous the grass in the plains and valleys had been parched by the summer drought, and as usual burnt up by the fires in many places, but here on ascending some lofty elevations we found ourselves in the midst of spring again; a variety of flowers just blooming, bushes and trees not yet in full foliage, and grass in abundance growing most luxuriantly. Cool spring water, too, was obtained almost on the very summit. I thought, then, what a paradise it would some day be for sheep, and kept constantly calling the attention of my companions to the fact. Here, as in Spain, the shepherds can keep gradually driving and feeding their flocks up the slopes of our Sierras, as the season advances.

In Oregon, likewise, is a vast deal of hill and mountain country, just calculated for sheep; indeed I know not what all that immense region lying between the Cascade and Rocky Mountains will ever be put to except grazing purposes, and especially sheep. But little, comparatively, is tillable land, and no way to get produce to market if raised, since the Columbia is not navigable above the Dalles, and the Cascade range a pretty good barrier against roads. I got the impression while living in Oregon, that the winters west of the Cascade were too rainy and muddy for sheep to thrive very well; although the Puget Sound Company (English) have bred them in large flocks for a number of years. What the quality of their wool is, I am unable to say. Were I in San Francisco I might refer to a letter, written me by Gov. Douglas of the Hudson's Bay Company, in the winter of 1848, in answer to one soliciting the shipment to me of certain shrubbery and fruit cions, and also making inquiry about sheep. He stated the different qualities the Company then had, and the price they could be furnished at their farms.

Whilst on the subject of early enterprises in the sheep importation line, I will add that Mr. Dickson, of the old firm of Dickson & Hays in San Francisco, was a fellow passenger with me and my sheep from the Islands, in 1847. He had lived in Australia, was then a merchant in Honolulu, and on his way over to see about establishing himself in California. Knowing the lucrativeness of wool growing in the Australian Colonies, and from listening to my enthusiastic description of this country, for such purpose, he determined shortly after landing, to go extensively into the business here himself. But for the gold discovery he would have dispatched a vessel to Sydney, in the latter part of 1848, principally to bring over two hundred head of the finest wool sheep to be obtained in that quarter, and in which venture I was promised an interest, and a passage tendered also to go over and see the country and superintend the sheep shipment,—which latter, though, I declined, by reason of my detestation of sea traveling, being sick all the time. Enough, though, of the past.

In a January number of the FARMER you have given a cut of the male and female Cashmere goat. Col. Davis—brother to Dr. Davis, of South Carolina, the first and only importer of those animals into the United States—has given me some very interesting information connected with their introduction. The Colonel, like his brother, is an enthusiast about cattle, horse and sheep breeding, and designs going extensively into the business in California. He is owner of a large and splendid body of land lying on the west bank of the Sacramento, not far above its junction with the San Joaquin. Besides grazing, he intends reclaiming a quantity of his tulé land for rice growing, which he is of opinion will succeed well. Being a South Carolinian, his opinion on this point is of some weight. Col. Davis says he also intends getting out some of those goats, very soon. By the by, they are mentioned in a late number of the New Orleans Delta, in the highest terms. Some have been sent to Tennessee, where they thrive also, as in South Carolina and Georgia, admirably. Indeed, the anxiety to have them is great among all stock raisers, and almost fabulous prices paid for a pair. If in those Atlantic States they do so well, what may we not look for in this superior even than Cashmerean clime, when transplanted and propagated here.

In my other letter you improperly inserted the word "Sutterville." The little village, meant and so written, was San Francisco, which in 1847 was but a village. At that period there was no settlement on the Sutterville site, although laid off the year previous into town lots. The printer also put Gen. for Geo. before McDougal.

There are those disposed to sneer and laugh at my expression of feeling in that communication. They have my pity in return. Some few I know are not so devoid of tender emotions, nor hardened and deprived of all generous sympathetic sentiment, in this coarse, unvirtuous, sensual society of ours, as to unappreciate what was thus spoken from my heart.

One remarked it was "maudlin," and he felt ashamed for me. The man himself is a poor, miserable sot; the most of his time in a maudlin state of inebriation. Once he occupied a high and influential position in society in California; and was possessed of a wife, than whom no woman in the State was nor is more lovely and accomplished. They have parted. She by daily labor earns a support for herself and their three beautiful little girl children, and leads a most exemplary and virtuous life; while he sponges out among bawdy houses and in company with "sports," vagabonds and pimps, a miserable existence. His relations and their friends in the meantime, despairing of his reformation, praying a drunkard's grave may soon relieve them of the disgrace which he attaches to them. Would that this poor mortal had felt for *his* little lambs a tender regard; the affection of a father, if not love and admiration for his noble wife, might in that event have saved him for himself, his family and his country.

For fifteen years I've roamed and sojourned far away from all my kith and kin and old home. But though so long severed from such associations, my heart instead of growing callous and cold, as I grow older and mix with the calculating, selfish, scheming and unprincipled herd of money seekers which surround one in our sodomite cities, all the more anxiously and ardently longs for something to love. Did I possess a wife and children, upon whom to open the flood-gates of pent up affection, I might possibly dam somewhat the channel which leads an overflow in the direction of pet sheep.

Since it is easier to preach than to set a good example by practice in some things, permit me here to urge on those forlorn and unhappy bipeds of my sex, who yet have hearts left in them and honor and true manhood enough to entitle them to seek the love of a chaste woman, to win a mate as soon as possible—and if at all qualified or the least inclined to a rural life, go to the country at once, and prove themselves patriots and good citizens of California, by raising as fast as circumstances will permit, all the grass, grain, grapes, chickens and children, and other animals, in their power.

As for me, I have long been wedded to a bride—(if I may thus personify what most persons tell me is a Utopian idea of mine, a mere chimera or hallucination of the brain)—political reform in California. By nature designed for such occupation, with ardent zeal have I for years past devoted myself to this cause. The thieves and money-changers and soul-traders must be driven out of our temple of liberty. The fathers of this republic did not build it to be desecrated, and have its high seats filled with such a band of plunderers as have taken possession of and polluted this western wing. Truly have they made it a den of thieves, and more unclean than Augean stables or a guano island rookery.

In another paper I shall speak more to the point on political topics—not partisan nor personal—but certain great questions appertaining to the interests of this State, which I doubt not you, Mr. Editor, and all who have made this land their HOME, will fully indorse,

CHAS. E. PICKETT.

THE IMPORTED SOUTHDOWN RAM—"TONEY."

Bred by Jonas Webb, of England. A winner of first prize at the Fairs of the New Jersey State Agricultural Society of 1855 and 1856, and of the United States Agricultural Society, at Boston, 1855. Also a winner at the Fair of Somerset County Agricultural Society, 1855. Imported by, and the property of, George Hartshorn, Esq., of Locust Grove, Rahway, New Jersey.

Lime vs. Insects.

[THE following most pleasing, because practical letter came to hand, last week, from a correspondent at the beautiful city of Oakland, and we hope it will induce many more to look to their soil, and by practical labor do as our worthy friend has done, and they will make their waste places blossom with the rose. We do hope that the citizens of Oakland will awake to their true interests, and make efforts to establish a County Horticultural Society, and connect with it the Mechanic interest. Then we shall see great results. We trust to hear often from the "Oaks."]

EDITORS FARMER: Having in your late visit to this locality, intimated a desire to be put in possession of any stray thoughts that may have, from time to time, lit upon the buds of our horticultural experience, we hereby comply with the invitation, and present you with the following.

Four years ago we fenced in our lots and commenced raising a few simple flowers. The spare moments, 'tween times, thus spent in spring, were returned to us again, throughout the season, with compound interest, in the form of pleasure derived from the contemplation of the beauties of nature. The following season was passed in like manner. The third season ditto, save the introduction of a new feature in the garden, not previously calculated on, viz: disease in some of the plants. Last spring we resolved to renovate the soil by the introduction of leaf-mold, stable manure and ashes. Three inches in depth of the old soil was removed, and a like quantity of leaf-mold put on instead. This, with a liberal supply of stable manure and wood ashes, we imagined, would give a healthy tone to the plants, and remove any disease that might be lurking about. Our calculations, however, were fallacious; for the disease of the previous years returned, and more than one-half the plants were affected. When the plants showed symptoms of decay, numbers of small insects of a pea-green color, would be found on the buds and new shoots. Having consulted with many, reputed to be skilled in these matters, innumerable prescriptions were the result; ashes, soot, tobacco juice, coal tar water, pure water, &c., were all duly administered, but the benefits derived were only temporary.

At the commencement of the present season, when sap was on the rise, the disease extended to nearly all the plants. It now became a question whether the insect world should *boss* the garden, or "we, us and Co." Ere the vote was taken, a resolve was made, not to desert the sinking ship until an effort was made to discover the leak. We reasoned thus: soils are composed of many ingredients; and if the component parts are not in due proportion, the vegetation is incomplete. Nature does nothing by chance; consequently, vegetable, as well as animal life, has laws for its rule and guidance, and the infringement of which always produces the penalty. It is mentioned, I believe, in Stephens' Travels in Arabia, that the natives in the interior of that country are sickly, walking skeletons, caused by the scarcity of the simple article, salt. It is also asserted, that the cholera first came into existence in Hindostan, owing to the insufficient quantity of salt consumed by the natives. This, we see, is the effect produced from an insufficient supply of salt in the propagation of animal life; and when this substance is supplied in excess we have the disease called scurvy. Such is salt when used homeopathically and in excess. Then may not vegetable life be diseased or destroyed, from the lack of some one simple ingredient in its food? It is held that calcareous matter is necessary as a component part to all fertile soils. Taking this for fact we proceeded thus: the geological character of our soil can boast of little or no calcareous matter in its composition. The vegetable matter used contains even less than the former, and stable manure is similarly situated. Again, the soil had been cultivated for four seasons; consequently, much of the component parts must have been extracted. To supply this waste, vegetable and stable manure was given; but no calcareous return was made to supply that extracted by vegetation. This brought the secret to a focus—lime was the secret—lime was wanted, and lime was given. Having a lot of old whitewash, we mixed with water to the consistency of city milk, and applied it to the roots of the plants; the sap ascending at the time, the calcareous influence was soon at the extremities of every bud and twig; when the insect world left for parts unknown, probably to the back country, to commence a course of smut and rust on our neighbors' wheat, where no calcareous influences can molest them.

OAKS.

OAKLAND, April 3, 1857.

The Chinese Prolific Pea.

EDITORS SOUTHERN CULTIVATOR: At the request of my friend, Mr. W. F. Douglass, I give you my personal knowledge of the Chinese Prolific Pea.

I feel a great interest in the extension of this extraordinary Pea, and I am satisfied that if the Southern farmers will give it a fair trial, they will find it to be the *greatest pea both for table use and for feeding stock* now known. It must be admitted, by every reasonable and sensible man who will take the pains to inform himself, that it certainly is the most prolific pea ever seen or heard of. The extraordinary yield from one single pea gathered by Mr. Douglass far exceeds anything of the kind I ever saw. It only remains to show, then, that it is a good pea for use.

It is a beautiful and delicious pea for table use; and as to stock, the hogs eat them with the greatest avidity: and the experiment having been fully tried by Mr. Douglass to my certain knowledge, I can say with candor to the public that they not only agree with them, but fatten faster than anything I have seen tried.

It is a well known fact that pea hay is most valuable for winter feed for stock; and it will be needless to add that where there is so great a yield of grain that the vine increases in tenfold proportion. I will only say that on the one and a half acres Mr. Douglass had in cultivation last year, there was at least four times as much vine as I ever saw on any piece of ground of the same size.

If you think this statement will be of any importance to the public, or benefit to Mr. Douglass, you are at liberty to publish it.

Yours, &c., J. B. L. MARSHALL.
Ass't Engineer Little Rock and Napoleon R. R.

SOUTH BEND, ARKANSAS, Jan. 4, 1857.

FOOT EVIL, OR "RUN ROUND" ON A HORSE'S FOOT.—*Editors Southern Cultivator:* Take soft soap and stir in fine salt, spread it on a rag three inches wide, and twelve inches long, and smear it on the hoof, so that the diseased part be covered, and over this sew a slip of osnaburg four inches wide, so as to be securely arranged. Put on fresh soap and salt, and clean rags every twenty-four hours. It is a never-failing remedy. I have stopped the disease so quick, that it only extended an inch long. It will also cure the Scratches.

MECKLENBURG.

FRUIT TREES IN THE NORTH.—Mr. J. McGillivray, one of the most enterprising farmers in Trinity county, has set out several acres of fruit trees on his ranch, near the junction of the north and south forks of the Trinity river. Many of the peach trees (which with the other fruit trees were brought from Oregon) are already in bloom. Near Cox's Bar D. I. Smith has set out a well selected variety of fruit trees.

Mixing of Corn Blossoms.

A writer in the Ohio Cultivator says: I see that the Hon. C. Mason, Commissioner of Patents, warns the public against cultivating the Chinese Sugar Cane in the vicinity of Dourah corn, Guinea corn and Broom corn. It is equally as necessary to warn the public against cultivating it in the vicinity of Maize or Indian corn, as the Cane hybridizes with Indian corn as readily as with the others. A neighbor of mine planted both in his garden last year. The cane, growing by the side of the corn, presented quite a different appearance from that growing remote from the corn—having small imperfect ears growing on the panicles, among the seed.

I see the Cane is highly spoken of for feeding hogs and cattle, but have seen no account of experiments in feeding it to sheep, or speculations on the subject. What do you say? I suppose it will be very good, unless it causes them to fatten too much.

SUGAR CANE IN NEBRASKA.—The Bellevue Gazette, published at Bellevue, Nebraska Territory, has the following:

We acknowledge the receipt of a small quantity of molasses, which was manufactured from cane grown in our Territory. Mr. Charles McRay informed us that the cane is known as the "Chinese Sugar Cane," and that from the early maturity of this species there is every reason to think that its culture can be made profitable.

CHINESE SUGAR CANE.—It is stated that a plan has been invented in France, that proves successful in making sirup by cold masceration. The cultivation of the plant is progressing in France, and meets with great favor. One variety has yielded 80 to 100 bushels of seed per acre, and one-half of the weight of the stalks in sirup. The results in France show that the ripening of the seed of Sorghum does not detract from the value of the juice.

Shade Trees about Dwellings.

My views in regard to the effect of shade trees around dwellings coincide with yours—that, to a certain extent, they do engender sickness—but this must depend in a measure upon the locality of the place, as well as the nature of the tree producing the shade. A friend residing in a neighboring county had a large number of the barren Mulberry growing in his yard, casting so dense a shade that the rays of the sun never reached the ground. I called his attention to the fact, and advised him to remove every alternate one, but he choose to let them stand; the consequence was he lost his wife and his only three children, and came very nigh losing his own life. Now, whether this is to be attributed to the dampness caused by the shade or not, I am not prepared to say; but my impression certainly bears in that direction. I may be mistaken in my notion, but it seems to me that the leaf of the Mulberry retains moisture longer, and is more difficult of decomposition than the leaf of any other tree, for which reason I have always looked upon it as a species of *Upas*, and have never allowed the woodman to spare it on my premises. On a high, sandy, elevation, I cannot think that shade would be so apt to produce sickness as on a low place, but in either case the trees should not be suffered to stand so closely as to prevent the sun from drying the ground, and again they should be trimmed sufficiently high to permit a free circulation of air. I belive, too, that if the housewife would be careful in having all fallen leaves immediately removed to the manure pit before they commence decaying, a very great cause of sickness would be removed with them. I would also recommend a similar disposition to be made of all slops, dead chickens, &c. This includes a part of my rural management, and I think the bakers will attest my family has enjoyed a good share of health.—[V. L. in Southern Cultivator.

TULE LAND BILL.—The Bill, which passed, though not so good as might be wished, is yet as good as can be had under the circumstances. It is needed immediately. The first section provides for the second class of lands separately, whereas some suppose the proceeds *all* go for reclamation, which do not. It was supposed the law of 1855 affected all lands, but it was those above the highest tide water. The present Bill embraces all these lands named, but keeps the proceeds separate, which accomplishes the end most to be desired. We shall speak further when we have examined the results deeper.

HORTICULTURE.—On Messrs. Allson & Powell's ranch, situated on Moriposa creek, near this town, we saw some two or three hundred peach trees in full bloom and in a most thriving condition. Nothing is more glorious and beautiful in botanical scenes than a large orchard of peach trees in full bloom—the glowing pink of the blossoms is vividly contrasted with the verdant leaves, while the graceful shape of the trees imparts order and completeness to the whole attractive display. On this ranch, too, may be found many choice varieties of grape vines, which will yield an abundant supply this fall; while here and there, throughout this well cultivated garden, may be seen the sturdy young tree, giving promise of future excellence and fruitfulness. As an experiment, we believe the growth of fruit in our vicinity will prove eminently successful and reasonably profitable, and no occupation in life is more delightfully interesting and healthful than that of the horticulturist.—[Mariposa Democrat.

NEW PAPER.—A new independent weekly paper called the Dispatch, has just appeared at the thriving town of Granite, the present terminus of the Sacramento Valley Railroad. It is published by Carpenter & Wellington.

AT St. Louis, Sierra county, water is increasing, and the miners are all busy. The town is fast filling up with men from the valley. The weather in that region is pleasant.

Important Query for California Orchardists.

We clip the following from the Wisconsin Farmer, and ask our fruit growers carefully to note any contrast between those fruit trees in their orchards raised from the budded stock, or by *root grafting*. This is a very important subject for them to study, as so many trees are raised in California by root grafting; and if trees in this State grow and bear luxuriantly by root grafting, when they fail in the other States, we have a very important point gained in Pomology!

ROOT GRAFTING—ANOTHER INSTANCE.

Messrs. Editors: Fourteen years ago last spring, I bought twelve root-grafted apple trees and set them out in good land, manuring them thoroughly and washing them with soap suds every spring. They made a fine growth. For ten years I cultivated those trees, and not even a blossom made its appearance to reward me for my labor. During the last four years two of them, the Golden Pippin and the Rhode Island Greening, have borne, perhaps as many bushels of apples. The balance have not borne enough to pay their first cost; and last winter about half of them were winter-killed, and all are beginning to decay.

Twelve years ago last month I planted a nursery. Some of these trees were grafted at one year old, and a part of the balance at standard hight, while a few I set out in my orchard without grafting at all. Of these last the seedlings were the best bearers, those grafted at standard hight the next, and none have winter-killed. My yellow Belle-Flowers and Greenings are the best bearers, and yield the largest and soundest fruit.

From my experience, I would not accept of all the root-grafted apple trees in the State as a gift. Nurserymen *must* know that they are reselling a worthless article when vending them. Persons intending to raise orchards had better begin by planting the seeds, and when their trees are large enough to graft, do it themselves —selecting their own cions from trees they know—than trust to itinerant grafters who furnish cions which *may* be the kind they represent them, or *may* not. Any man, with a sharp knife in his hand and common sense in his head, can graft as well after one hour's experience, as those who make grafting a profession.

C.

The New England Farmer.

Dear to the heart of every true American will ever come the welcome sound of dear New England, and among the glorious names used to designate her best and happiest citizens none rank higher than the good old familiar homestead name of a New England farmer, and if there is one class of citizens more happy than all the rest, it is, it must be, the New England farmers: and as we recall their labors, as we remember their rock-bound soil, the long ice-clad hills and valleys; as we bring to mind how long are the winters, and how short the summers, and how much they have to contend against, and yet what they have accomplished, we cannot but exclaim, this is the result of intelligent farming, and this is brought about by that universal habit of New England farmers—they always take the agricultural papers; they pay for them, and they read them, and they practice upon the precepts taught in those journals. All know that New England has a class of agricultural papers that will equal any that are published in any part of the world; and among them none stand more deservedly high, none occupy a greater share of public confidence, or are more ably conducted, than the New England Farmer, published at Boston, Mass., edited by Simon Brown, Esq., and published by Joel Nourse, Esq.

The New England Farmer is one of the oldest papers published in Boston, and we cannot but acknowledge its worth, for it is always willing to commend all that is worthy, wherever found, without any party, sectarian or local consideration. It is well known that most of the Eastern papers are silent upon everything that speaks in praise of California, lest it should draw away their population; but we notice, with pride and satisfaction, the following handsome tribute paid to California and her capacities, and to the State Fair; and the kind and flattering notice of our own journal, for this, especially, and for all kindness we shall always be grateful. We append the article entire, and commend it to all our readers, that they may know and feel that California is beginning to be known and appreciated.

California Farming.—"All is not gold that glitters;" nor, thank fortune, is all worthless that does not glitter. The mineral wealth of California which flashed so suddenly upon the vision of a money-dreaming world, is pale and dull in contrast with her vegetable productions. What are a few particles of gold mingled with the sand and mud of the earth's surface, or seamed into rocks, when compared with trees whose trunks spring from the soil to an elevation exceeding twice the hight of Bunker Hill monument? Such monstrous trees, however, are but specimens of the wonderful fertility which the soil of California delights to manifest.

> "Whatever fruits in different climes are found;
> That proudly rise or humbly court the ground—
> These here disporting own the kindred soil,
> Nor ask luxuriance from the planter's toil."

The Fair of the State Agricultural Society, held last fall at San José, must have afforded a grand spectacle to those who are more interested in the productions of her farms, than in those of her mines. Although we have not seen a full description of the exhibition, we have seen enough to excite our wonder and admiration. Samples were presented of oats from a yield of one hundred and thirty-four bushels to the acre; beets weighing one hundred and three pounds, and of those that measured three feet and four inches in length, two feet and two inches in circumference, at the top, and twenty inches in circumference, two feet and a half from the top; of cabbages, measuring four feet and eight inches in circumference, weighing fifty pounds; of pumpkins as large round as an ox, measuring seven feet eight inches in circumference, and weighing two hundred and fifty-six pounds; and of many other mammoth vegetables.

The early maturity of fruit trees in California is perhaps even more wonderful than the great size which vegetation attains there. In Colonel Wilder's address before the American Pomological Society, at Rochester, it is stated that one of his neighbors, who went to California in 1854, and now resides in Napa city, writes:—"Such is the rapid growth of vegetation in this district, that apple trees from seed planted in the spring of 1853, and budded the same year, yielded fruit in the autumn of 1855." He says in the same letter to Col. Wilder, "I wish you could take a look at our peach orchard, loaded with fruit. You could hardly believe that the trees had made all their growth, and were most of them raised from seed since I came to California (Feb. 8, 1854). The crop from this orchard is now (July 18, 1856), going to market, and we expect it will amount to between ten and twenty thousand dollars."

But intelligent farmers in California do not suppose that the fertility of the soil is inexhaustible. We find in a late number of the California Farmer timely cautions against the "skinning" process that has so greatly impoverished the soil in other sections of our country. The writer argues that, in consequence of the peculiarities of the climate on the Pacific coast, a somewhat different course must be adopted to preserve the fertility of the land from that pursued in other agricultural sections. He says:

"In other States and countries, where agriculture has been studied and practiced, both as a Science and an Art, rain falls at short intervals during the warmest summers, and in consequence, as a general rule, the warmer the weather the greater the luxuriance of vegetation. There the grass is ever green, and a regular rotation of crops, admitting of an agreeable change, such as Nature delights in, from one species to another, may be adopted with ease, and the profits of such a sensible rule calculated on with certainty. Here the long continued drought of summer, in most cases, entirely precludes the possibility of having clover and the usual grasses, so essentially beneficial in other States, admitted into any course of crops which may be adopted.

"Turnips, also, form a crop which in many countries have conferred upon northern latitudes the advantages in some respects of the tropical, by affording to the farmer, at seasons when 'the hills are covered with snow,' the luxury of green and juicy food for his stock. But turnips could not be raised in this State, to be of any benefit when we are most in want of them, namely, when the old grass has been eaten cleanly off, and the earlier rains of winter have not had time to restore even a scanty vegetation in the pithless leaves of the new."

The writer of the article from which the foregoing is extracted, does not express any opinion as to the course that should be pursued by the farmers of California; he merely calls attention to the importance of "making some compromise with nature," by which the present fertility of the soil may be preserved. We regret that he does not suggest some definite plan; because, without grass and clover, whose multitudinous fibres fill the soil with a mass of vegetable matter that has been estimated to amount, in some cases, to forty tons per acre, and whose tap-roots are thought to be a tolerable substitute for the subsoil plow, we should hardly know where to begin or end a system of rotation. Nor should we be willing, we think, to exchange the green carpet which covers our hills and dales, and which the eye never tires in gazing upon, even for the bright flowers and mammoth vegetables which manifest the wonderful fertility of the soil of this land of gold.

Wonderful in gold, wonderful in fruits and vegetables, California is still more wonderful in itself. To her how strictly applicable are the exclamations of the poet-prophet,—

> "Who hath heard such a thing? who hath seen such things?
> Shall the earth be made to bring forth in one day?
> Or shall a nation be born at once?"

But to us, as an Editor, the California Farmer is the most wonderful of all. As large as our own weekly sheet, this paper has already advanced far into the sixth volume of a vigorous existence. It is well edited, has able correspondents, is one of the most spirited of our agricultural exchanges, and appears to be well supported. And all this, on a portion of the earth's surface, of which a dozen years ago the civilized world knew little more than they did of the territories of the moon,—a portion, too, that has been settled by people who went there,—as Cortez scornfully told Montezuma he and his followers came to Mexico,—not to till the soil like peasants, but to gather gold.

A Voice from Old Kentucky.

We rejoice to note a new and generous desire on the part of other States to show to their people the *true condition* and resources of our own glorious California. We give the article entire from the Tri-weekly Commonwealth, published at Frankfort, Kentucky, and ably conducted by Thomas M. Green, Esq. We shall place the Commonwealth upon our exchange list with pleasure.

[From the Frankfort (Ky.) Tri-weekly Commonwealth.]

Agriculture in California.

The people who have navigated two seas, or crossed a vast wilderness, and settled the distant shores of the Pacific, are an enterprising and progressive people. The farmers of California especially, have displayed an energy, industry and public spirit, worthy of all praise, and they should be held up for the admiration and emulation of their brethren in older States. Their valleys and mountain sides are already teeming with agricultural and horticultural productions of vast amount, gigantic size, and almost infinite variety, and soon they will be presented in the chief markets of the world.

Besides numerous County Agricultural Societies they have also a large and flourishing State Agricultural Society (under the liberal patronage of the State), which held her second [third] Annual Fair last fall, which was entirely successful, and would have done credit to the oldest State in the Union. The State Society, also, during the last summer, sent a committee of intelligent gentlemen through various portions of the State to inspect her agricultural resources and progress, and their Report, together with the Report of the State Agricultural Society, is already published and widely circulated, in order to invite the enterprise and capital of the world.

But this is not all. The California farmers know the value of an agricultural paper, and they have one, the California Farmer, now in its sixth volume, published weekly in San Francisco, of large size, handsome style, wide circulation, and liberally patronized. The editors are gentlemen, not only of intelligence and enterprise, but also of public spirit and liberality; for their paper is sent regularly to the Corresponding Secretary of the Kentucky State Agricultural Society and may be seen on file at the Room of the Society, over the Executive Office, in Frankfort.

But this, even this, is not all, Mr. Editor. In the last number of that paper I noticed the following announcement which you will please to republish for the edification and emulation of the farmers in Kentucky:

Exhibition Rooms, State Agricultural Society.—It may not be generally known how much time and labor have been expended to prepare a place of interest, such as is now offered freely to all who will take the time to visit them, as can be found in the State Agricultural Society's Rooms, on Fourth street, Sacramento. A large variety of specimens in agriculture, in minerals, in manufactures, and mechanical skill, together with works of art, are exhibited in the cases, and displayed upon the walls of the Rooms, and upon the counters. To all who feel any interest in these matters, we can say that a few hours can be spent in examination of the various curious products of genius and skill, there exhibited. Strangers from abroad and all others are freely and kindly invited to take notice of these rooms.—[Cal. Farmer, vol. 6, page 22.

We, also, have an *Agricultural Room;* and after one year's effort, in frequent appeals, there are *some things* in it, and there is *room, ample room*, for many more.

Yours truly, Franklin Farmer.

Feed for Poultry.

Neither fowls, nor anything else, can prosper unless well cared for. No observant person could have the charge of fowls for a month, and not be fully aware, at the expiration of that period, that the growth of the chicken, the accumulation of flesh, and the production of eggs may be best promoted by a judicious adaptation of the food to the object specially in view. That without good shelter for our birds, the consumption of food is also increased in proportion to the carbon thus exhausted, will be soon manifested to the dullest intellect.

Grain of different kinds forming the main article of our poultry's feed, at the present high prices would seem to indicate increased inquiry as to the relative value of each for that purpose.

In estimating the comparative value of the numerous items which are more or a less portion of our fowls' "bill of fare," let us take Indian corn as our standard. Now the present price of this grain is 87½ cents; barley $1 25; buckwheat 80 cents, and oats 60 cents per bushel. Oats at this price (30 pounds to the bushel), we would not recommend, excepting where some change of diet appears necessary; but while the relative prices of corn stand as above, we should not be found among the purchasers of oats, to be given whole, however useful in the form of meal, or crushed.

The existence of fowls would be of short duration were they confined or limited to one single kind of food, however excellent of its kind; this would necessarily imply a state of confinement for the experiment, for a large variety would always be at hand. Many articles most useful for a change would, if given continuously, prove highly injurious, such as wheat, peameal, or animal food; while others, such as barley and crushed oats, harmless in themselves, would either be refused, or else, if taken, disorder the natural functions of the body.

But though wheat is a dearer article than barley, it is most useful at certain periods; for nothing exceeds it for laying on flesh, and forming muscle for young birds.

Barley sprouted, and malt mixed, could, occasionally, be given with excellent effect; and it is excellent for poultry of all ages—and so is brewer's grains, if given fresh and hot. Buckwheat must be of the very best, for samples any way stale, will be rejected; indeed, we have found our poultry dainty about it even when accustomed to it when young; but many breeders find it otherwise, and use large quantities of this grain, which, when boiled, appears to be more highly esteemed.

Indian corn, whole or cracked, the latter probably is most profitable shape, we consider the most ecomical, and most highly esteemed.

Whenever flesh is to form a portion of the food of our poultry, we should prefer giving it boiled, and not in a raw state.

Poultry eat a great variety of food: all kinds of grain, and seeds, and preparations made from them; also, most sorts of vegetables, raw or boiled; and, it is well known, they are fond of a certain quantity of animal food, raw or cooked—insects and worms, grubs and maggots, they search for and devour with avidity, and some persons collect these on purpose for them. Wheat middlings, shorts, bran, corn and oatmeal are useful, and are profitably given in combinations, particularly with boiled or steamed potatoes, in which form they afford a cheap supply of very nourishing food; but it is essential not only that these should be boiled or steamed, but that they are given *warm*, for fowls dislike them if given to them cold. In most houses there are many scraps and refuse that will serve for fowls, such as crumbs of bread, fragments of pies and puddings, and even bits of meat, and fish, and vegetables, such as lettuce, endive, cabbage, spinach, chickweed and grass.

Fowls do not judge so much by taste and smell as by the eye in distinguishing their food, which, when first swallowed passes into their crops, and after being there mecerated, goes into the funnel-stomach, and then into the gizzard, in which it is triturated, or ground, as in a mill, which appears to answer the same purpose as the teeth of quadrupeds. To assist this effect, fowls pick up and swallow many small pebbles and stones; and it is proper to lay some of these about in the place where they are kept. Pure water only should be given them, for foul or bad water is certain to cause disease.

The faults of modern feeding are feeding out of vessels of any description—throwing down large heaps of food, irregularly—and too often the substitution of anything cheap, for that which is wholesome.

Fowls are early risers. In a state of nature, all birds, at break of day, are in search of food, and they find it. What an evil it is, then, for them to be fed one day at seven, next day at nine, and sometimes not till mid-day. A still greater evil is, to endeavor to make up for previous neglect by an extra quantity. If whole grain is fed, it is better to throw it far and wide, and scatter it as much as possible—among straw or grass, spread over the ground, making them work for a living, and you will see the fowls scatter about in a natural way, seeking the stray grains, and there will be none lost. It will cost no more than feeding in troughs, and the condition of the fowls will amply compensate for the little extra trouble. [Bement, in Genesee Farmer.

Expensive Chinese Sugar Cane Seed. It is stated in Washington, that Mr. Asa Whitney, projector of the Pacific Railroad, resides near that city and keeps a dairy, from which he now supplies the people of Washington City with milk. Also that he raised an hundred bushels of the seed of the Chinese Sugar Cane, this season, and that it was all purchased by the Commissioner of Patents at $5 per bushel—a far more profitable crop than wheat.

General History of the Horse.

[CONTINUED.]

THE WILD HORSE.

Troops of wild horses are found in the plains of Great Tartary, and also in several parts of South America. In neither, however, can we recognize an original race. The horses of the Ukraine, and those of South America, are equally the descendants of those who had escaped from the slavery of man. The Tartar horses are fleet and strong, but comparatively of an ordinary breed. Those of South America retain, almost unimpaired, the size and form of their European ancestors.

In no part of America, or of the more newly discovered islands of the Pacific, was the horse known, until he was introduced by Europeans; and the origin of the horses of Tartary has been clearly traced to those who were employed in the siege of Azoph, in 1657, but were turned loose for want of forage.

All travelers who have crossed the plains extending from the shores of La Plata to Patagonia, have spoken of numerous droves of wild horses. Some affirm that they have seen ten thousand in one troop. They appear to be under the command of a leader, the strongest and boldest of the herd, and whom they implicitly obey. A secret instinct teaches them that their safety consists in their union, and in a principle of subordination. The lion, the tiger and the leopard,* are their principal enemies. At some signal, intelligible to them all, they either close into a dense mass, and trample their enemy to death; or, placing the mares and foals in the centre, they form themselves into a circle, and welcome him with their heels. In the attack, their leader is the first to face the danger, and when prudence demands a retreat, they follow his rapid flight.

In the thinly inhabited parts of South America, it is dangerous to fall in with any of these troops. The wild horses approach as near as they dare; they call to the loaded horse with the greatest eagerness, and, if the rider be not on the alert, and have not considerable strength of arm, and sharpness of spur, his beast will divest himself of his burden, take to his heels, and be gone forever.

Capt. Head gives the following account of a meeting with a troop of wild horses, where the country is more thickly inhabited. Some poor captured animals are supposed to be forced along by their riders at their very utmost speed: "As they are thus galloping along, urged by the spur, it is interesting to see the groups of wild horses one passes. The mares, which are never ridden in South America, seem not to understand what makes the poor horse carry his head so low, and look so weary.† The little innocent colts come running to meet him, and then start away frightened; while the old horses, whose white marks on the flanks and backs betray their acquaintance with the spur and saddle, walk slowly away for some distance, then breaking into a trot as they seek their safety, snort and look behind them, first with one eye and then with the other, turning their nose from right to left, and carrying their long tail high in the air."

The same pleasing writer describes the system of horse management among the rude inhabitants of the plains of South America. They have no stables, no fenced pastures. One horse is usually kept tied at the door of the hut, fed scantily at night on maize; or at other times several may be inclosed in the *corral*, which is a circular space surrounded by rough posts, driven firmly into the ground. The mares are never ridden, or attempted to be tamed, but wander with their foals wherever they please.

When the *Guacho*, the native inhabitant of the plains, wants horses for himself, or for the supply of the traveler, he either goes with his *lasso* to the *corral*, and selects those, possibly, who on the preceding day had for the first time been backed, or he scampers across the plain, and presently returns with an unwilling, struggling, or subdued captive. When the services of the animals have been exacted, he either takes them to the *corral*, and feeds them with a small quantity of maize, if he thinks he shall presently need them again, or he once more turns them loose on the plains.

Travelers give some amusing accounts of the manner in which all this is effected. Miers thus describes the *lasso*, simple in its construction, but all-powerful in the hands of the Gaucho.

"The *lasso* is a missile weapon used by every native of the United Provinces and Chili. It is a very strong plaited thong of equal thickness, half an inch in diameter, and forty feet long; made of many strips of green hide, plaited like a whipthong, and rendered supple by grease. It has, at one end, an iron ring above an inch and a half in diameter, through which the thong is passed, and this forms a running noose. The Gaucho, or native Peon, is generally mounted on horseback when he uses the lasso. One end of the thong is affixed to his saddle girth; the remainder he coils carefully in his left hand, leaving about twelve feet belonging to the noose end, in a coil, and a half of which he holds in his right hand. He then swings this long noose horizontally round his head, the weight of the iron ring at the end of the noose assisting in giving to it, by a continued circular motion, a sufficient force to project it the whole length of the line."

When the Gauchos wish to have a grand breaking-in, they drive a whole herd of wild horses into the corral. "The corral was quite full of horses, most of which were young ones, about two or three years old. The *capitar* (chief Gaucho), mounted on a steady horse, rode into the corral, and threw his lasso over the neck of a young horse, and dragged him to the gate. For some time he was very unwilling to leave his comrades; but the moment he was forced out of the corral, his first idea was to gallop away; however, a timely jerk of the lasso checked him in the most effectual way. The peons now ran after him on foot and threw a lass over his fore legs, just above the fetlock, and twitching it, they pulled his legs from under him so suddenly, that I really thought the fall he got had killed him. In an instant a Gaucho was seated on his head, and with his long knife, and in a few seconds, cut off the whole of the horse's mane, while another cut the hair from the end of his tail. This, they told me, was a mark that the horse had been once mounted. They then put a piece of hide into his mouth to serve for a bit, and a strong hide halter on his head. The Gaucho who was to mount, arranged his spurs, which were unusually long and sharp, and while two men held the horse by his ears, he put on the saddle, which he girthed extremely tight. He then caught hold of the horse's ear, and in an instant vaulted into the saddle; upon which the man who held the horse by the halter threw the end to the rider, and from that moment no one seemed to take any further notice of him.

"The horse instantly began to jump in a manner which made it very difficult for the rider to keep his seat, and quite different from the kick or plunge of an English horse; however, the Gaucho's spurs soon set him going, and off he galloped, doing everything in his power to throw his rider.

"Another horse was immediately brought from the corral, and so quick was the operation, that twelve Gauchos were mounted in a space which hardly exceeded an hour. It was wonderful to see the different manner in which different horses behaved. Some would actually scream while the Gauchos were girding the saddle upon their backs; some would instantly lie down and roll upon it; while some would stand without being held—their legs stiff, and in unnatural positions, their necks half bent towards their tails, and looking vicious and obstinate; and I could not help thinking that I would not have mounted one of those for any reward that could be offered me, for they were invariably the most difficult to subdue.

"It was now curious to look around and see the Gauchos on the horizon in different directions, trying to bring their horses back to the corral, which is the most difficult part of their work; for the poor creatures had been so scared there that they were unwilling to return to the place. It was amusing to see the antics of the horses—they were jumping and dancing in different ways, while the right arm of the Gauchos was seen flogging them. At last they brought the horses back, apparently subdued, and broken in. The saddles and bridles were taken off, and the young horses trotted off towards the corral, neighing to one another."

When the Gaucho wishes to take a wild horse, he mounts one that has been used to the sport, and gallops over the plain. As soon as he comes sufficiently near his prey, "the lasso is thrown round the two hind legs, and as the Gaucho rides a little on one side, the jerk pulls the entangled horse's feet laterally, so as to throw him on his side, without endangering his knees or his face. Before the horse can recover the shock, the rider dismounts, and snatching his poncho or cloak from his shoulders, wraps it round the prostrate animal's head. He then forces into his mouth one of the powerful bridles of the country, straps a saddle on his back, and bestriding him, removes the poncho; upon which the astonished horse springs on his legs, and endeavors by thousand vain efforts to disencumber himself of his new master, who sits quite composedly on his back, and by a discipline which never fails, reduces the horse to such complete obedience, that he is soon trained to lend his whole speed and strength to the capture of his companions."

*These animals are of a different race from those which go under the same names in the Old World, and are very inferior in strength

†An Englishman once attempted to ride a mare, but he was hooted and pelted by the natives, and thought himself fortunate to escape without serious injury.

Domestic Department.

To Preserve Corned Beef for Summer Use.—In the month of April, or May, when the brine begins to ferment, take up the beef—empty the brine from the barrel; and wash and dry with a cloth. Then take a tub of water, and wash each piece of meat well, and also dry with a cloth. When all is done, take dry salt and rub thoroughly on each piece, and lay back in the barrel. When all is completed, cover the barrel, and the beef will keep two years or more, as nice as when first packed. Salt beef should be put in warm water the day before using, to extract the salt.

For Curing Hams.—Take of salt twelve pounds; molasses half a gallon; brown sugar two pounds; salt peter half a pound. Make the salt peter fine, and mix well with salt, then add of cloves, allspice and black pepper one tablespoonful each, pounded fine. Mix all well together, and rub on the hams. The above quantity will cure 175 pounds of meat. The hams should be taken up once in two weeks, and rubbed with the liquid in the bottom of the tub. Let them lay six weeks in pickle, then smoke with corn cobs.

Orange Custards.—One sweet orange; four spoonsful of sugar; four eggs; one quart milk. Squeeze the juice, and grate the peel. A little rose water is a great addition. Bake or boil.

Sweet Potato Pudding.—Boil two large potatoes—mash fine and strain. Add a piece of butter size of an egg; a little salt; a pint of sour milk, or butter milk; a tea cup of sugar; two small tea spoonsful soda dissolved in water. Bake, and serve with cream, or some kind of sauce.

Gooseberry Pudding.—Mash one pint stewed gooseberries; when cold stir in two ounces sugar; add two ounces butter and two of sugar, beaten to a cream; two ounces grated bread, three eggs, beaten; stir all in in turn; line pudding dish with puff paste, pour in, and bake one half hour.

Indian Pudding.—Two quarts scalded milk, one-half pint meal, one-half tea-cup molasses, salt and spice; bake one-half hour.

Paste Pudding.—Make a paste of one egg and flour; boil three quarts milk; shred the paste fine and stir in; when cold, add nine beaten eggs, salt, sugar and nutmeg.

Sponge Cake.—One pound butter, one of sugar, one of flour, one of citron, two tea spoonsful essence lemon, one of cream tartar, one-half soda, yolks twenty eggs.

Lady Cake.—Same as above, only use the whites, instead of yolks.

Apple Pie.—One quart scalded milk, one pint grated sour apples, two eggs, sugar and spice.

Rural Walks.—If we wish rural walks to do our children any good, we must give them a love for rural sights; an object in every walk; we must teach them—and we can teach them—to find wonder in every insect, sublimity in every hedge-row, the records of past worlds in every pebble, and boundless fertility upon the barren shore; and so, by teaching them to make full use of that limited sphere in which they now are, make them faithful in a few things, that they may be fit hereafter to be rulers over much.

Miseries.—Small Miseries, like small Debts, hit us in so many places, and meet us at so many turns and corners, that what they want in weight, they make up in number, and render it less hazardous to stand the fire of one cannon ball, than a volley composed of such a shower of bullets.—[Colton.

Poverty a Virtue.—Dr. R—— maintained that poverty was a virtue. "That," said Mr. Canning, "is literally making a virtue of necessity."

Miscellany.

TRIBUTE TO G. D PRENTICE.

'Twa following beautiful tribute to the poet, Prentice, we copy from the Louisville Journal. It is indeed a beautiful tribute:

I envy not a courtly name,
Its power, its pomp, its riches all;
I envy not the phantom fame
How'er her siren tones enthrall
To homage and idolatry.

Yet envy I the child of song,
Whose pinions far through realms of space
Can soar beyond this mundane throng,
And for the world its visions trace,
And revel in its phantasy.

Ah! would that I, in measures sweet,
Could breathe to thee the heart's full flow
Of feeling deep—ah! then replete,
In plaintive cadence soft and low,
Would gush my soul's wild melody.

Thy thrilling words have soothing power,
As to my listening heart they steal,
And nestle there at twilight hour,
That hour when we most deeply feel
Love's magic spell and witchery.

A dream of joy, of new felt bliss,
Is borne upon the evening's shades;
It lulls the soul e'en as a kiss
In raptures sweet, and, while it fades,
Leaves soft but thrilling ecstacy.

I've treasured every word of thine,
E'en as a miser hoards his gold;
For deep within my heart's deep shrine
Are longings wild but yet untold,
Reared by thy magic minstrelsy. RENEN.

Letter Writer.

We make the following extracts from the new work just published by that excellent publishing House, Messrs. Fowler & Wells of New York, from whose presses issue so many very valuable works, of so much real interest to the people. This "Letter Writer" we spoke of in our last number, and we now present to our readers, and more especially to those who desire to order a newspaper and similar works, the following valuable hints:

Orders for Newspapers and Magazines.—Everybody has occasion to write to editors and publishers, inclosing subscriptions for newspapers and magazines. It seems a very simple matter, and, in fact, really is so; but in no other department of business correspondence is so much carelessness exhibited and so many blunders committed. The consequences are less disastrous than they would be in larger commercial transactions, but the delays and vexations of which they are the source, are neither few nor small. They may all be easily avoided, and we are about to tell you, in a few words, how.

When you sit down to order a newspaper or magazine, consider:

1. What is the name of the publication you desire. It is not sufficient, in every case, to say, "Please send me your paper," for several papers may be issued from the same office. *What* paper?

2. When you wish your subscription to commence. Do you want the paper from the commencement of the current volume, from the present time, or from—when?

3. For what length of time you purpose to subscribe. The amount of money inclosed should, it is true, determine this; but it should also be stated, to show that you fully understand the terms.

4. Where you wish it sent. What is your address? You write "Greenville," perhaps, at the head of your letter. Everybody, of course, knows where Greenville is, for there are nearly as many Greenvilles as there are States in the Union; but the publisher may wish to know to which particular Greenville you desire your paper sent. Always mention the State, and, except in the case of large cities and important towns, the county also; as, "Greenville, Greene Co., Tenn." That tells the whole story. This last particular may be embraced in the date; but if you do not give it fully and distinctly there, be careful to do so in the body of your letter.

5. Your own name. Strange as it may seem, some correspondents actually neglect to sign their letters; Mr. Jones, for instance, expecting, perhaps, that the publisher will recognize his *handwriting*, which very possibly he may not do; leaving Mr. Jones to wonder why his paper does not come.

6. The inclosure. The cash should in all cases accompany the order for a newspaper or magazine. Publishers do business on no other terms nowadays. Do not forget to put the money in your letter.

With these simple directions before you, or in your memory, you certainly will not write such a letter as the following:

ROCKVILLE (no State,) Nov. 6, 1856.

MR. EDITOR: I write for you to send me your valuable and interesting paper, to this place, and inclose two dollars, to pay for it. Send immediately. [No name.]

Now all that "Mr. Editor" can do is to lay the letter carefully aside and wait till he hears again from the writer, who in the mean time will go every day to the post-office and inquire for his expected paper, and finally get vexed, and perhaps angry, and write a very indignant letter to "Mr. Editor," demanding why he has neglected to send the publication ordered. Perhaps he will put his name at the bottom of his letter, and his full address at the top this time. The order might quite as easily have been correctly written at first, in something like the following terms:

ROCKVILLE, ADAMS Co., OHIO, Nov. 6, 1856.

FOWLER & WELLS.

Gentlemen: I inclose two dollars, for which please send me Life Illustrated one year, commencing with this week's issue. Address me as above, and oblige,

Respectfully yours,
JAMES CLARK.

A few more examples under this head may be useful. We do not insist upon any arbitrary forms, but simply that the essential particulars be briefly expressed.

ZANESVILLE, MUSKINGUM Co., OHIO, Dec 14, 1856.

MESSRS. FOWLER & WELLS.

Gentlemen: Inclosed you will find $5 (five dollars), for which please send (according to your published terms) three copies of Life Illustrated, for one year, commencing with Jan. 1st, 1857. Address them as follows:

James Walters, Zanesville, Ohio, 1 copy.
Paul Harland, Putnam, " "
Miss Clara Wilson, Maysville, Ky., "

Hoping to be able to send you a larger list, in the course of a few days, I remain,

Respectfully yours, ANDREW WALKER.

Messrs. Fowler & Wells have also in press the following new hand books, for home improvements:

How to Talk: a new Pocket Manual of Speaking, Conversation, and Debating; or, Hints towards a Grammatical and Graceful Style; with more than five hundred common mistakes corrected. Sent by mail, postage prepaid. Price, paper, 30 cents, muslin 50 cents.

How to Behave: a Manual of Republican Etiquette, and Guide to Correct Personal Habits; with Rules and By-Laws for Debating Societies and Deliberative Assemblies. Price, paper 30 cents, muslin 50 cents.

How to do Business: a Guide to Success in Practical Life, and Hand-Book of Legal and Commercial Forms. Price, paper 30 cents, muslin 50 cents.

How to Write is now ready, and may be ordered by mail or otherwise. It will be rapidly followed by the other numbers of the series. One dollar will pay for the four works in paper, or $1 75 in muslin, and they will be sent to subscribers *prepaid by mail* as fast as issued.

Address Fowler & Wells, No. 308 Broadway, New York.

The Forged Will.

THE New York Evening Post gives the following thrilling scene in court, as related by Samuel Warren, F. R. S., author of the Diary of a Late Physician, Ten Thousand a Year, &c., to a gentleman of that city, as having occurred in his own practice:

A few years since, a man of respectability was tried in England on the charge of forging a will, in which it was found that he had an indirect interest to a large amount. Mr. Warren was the associate prosecuting attorney, and the case was tried before Lord Denman.

The prisoner being arraigned and the formalities gone through with, the prosecutor, placing his thumb over the seal, held up the will and demanded of the prisoner if he had seen the testator sign that instrument, to which he promptly answered, he had.

"And did you sign it at his request, as subscribing witness?"

"I did."

"Was it sealed with *red* or *black* wax?"

"With red wax."

"Where was the testator when he signed the will?"

"In his bed."

"Pray how long a piece of wax did he use?"

"About four or five inches long."

"Who gave the testator this piece of wax?"

"I did."

"Where did you get it?"

"From the drawer of his desk."

"How did he light that piece of wax?"

"With a candle."

"Where did that candle come from?"

"I got it out of a cupboard in his room."

"How long was that piece of candle?"

"Perhaps four or five inches long."

"Who lit that piece of candle?"

"I lit it."

"With what?"

"With a match."

"Where did you get that match?"

"On the mantel-shelf in the room."

Here Warren paused, and fixing his large, deep, blue eyes on the prisoner, he held the will above his head, his thumb still resting upon the seal, and said in a solemn measured tone,—

"Now, sir, upon your solemn oath, you saw the testator sign that will—he signed it in his bed—at his request you signed it as subscribing witness—you saw him seal it—it was with red wax he sealed it, a piece of wax, two, three or four inches long—he lit the wax with a piece of candle which you procured for him from the cupboard—you lit that candle by a match you found on the mantel shelf?"

"I did."

"Once more, sir—upon your solemn oath, *you did?*"

"I did."

"My Lord—IT'S A WAFER!!!"

KISS OR FIGHT.—An exchange tells a story of a country party, thus:

A stalwart young rustic, who was known as a formidable operator in a "free fight," had just married a blooming and beautiful country girl, only sixteen years of age, and the twain were at a party where a number of young folks of both sexes were enjoying themselves in the good old fashioned pawn playing style. Every girl was called out and kissed except Mrs. B., the beautiful young bride aforesaid, although there was not a youngster present who was not dying to taste her lips, they were restrained by the presence of her herculean husband, who stood regarding the party with a look of sullen dissatisfaction. They mistook the cause of his anger, however, for, suddenly rolling up his sleeves, he stepped into the middle of the room, and, in a tone of voice that at once secured marked attention, said:

"Gentlemen, I have been noticing how things have been working here for some time, and I ain't half satisfied. I don't want to raise a fuss, but—" "What's the matter, John?" inquired half a dozen voices. "What do you mean? Have we done anything to hurt your feelings?" "Yes, you have; all of you have hurt my feelings, and I've got just this to say about it: Here's every gal in the room been kissed mighty nigh a dozen times apiece, and there's my wife, who I consider as likely as any of 'em, has not had a single one to-night; and I just tell you now, if she don't get as many kisses the balance of the time as any gal in the room, the man that slights her has got me to fight—that's all. Now go ahead with your plays!" If Mrs. B—was slighted during the balance of the evening, we did not know it. As for ourselves, we know that John had no fault to find with us individually, for any neglect on our part.

HOW TO MAKE NIAGARA FALLS USEFUL, AS WELL AS BEAUTIFUL.—I lately heard an idea suggested of such a bold and extraordinary nature, that it struck me with awe from its very magnitude. Of course the originator is a Yankee, for no one but a Yankee could eliminate such a gigantic idea. The proposition is simply this: to construct an immense water-wheel at Niagara Falls; not a small temporary affair, but one large and strong enough to use the entire power of the Fall. From this, with proper grading, he would lay down a permanent shaft through the State of New York, terminating at Albany. Those in want of power could then "belt" on, *ad libitum, ad infinitum*. What a splendid row of cities—manufacturing cities—would grow up along the whole line of the shaft! Steam engines would then be nowhere; and as for those paltry water-powers called "privileges," they would be like children dismissed from school by an indulgent master, henceforth to play at leisure, running through their "course," without a restraining "dam."

Agricultural Papers.

AGRICULTURAL Science is still in its infancy. "Darkness as darkness itself," hangs over the pathway of him who attempts to explore its fields. In its present stage of development, some of its most important truths are incapable of demonstration. What one approves both in theory and practice, another condemns. Philosophical deductions and practical experience are arrayed against each other. And yet its principles are as fixed in their operation as are the principles of any science; and when they shall have received the careful and philosophical attention which the coming years are destined to bring them, they will be found as demonstrable as are the truths of mathematics.

In attaining so desirable and important a result, we must rely in no small degree upon agricultural papers. It is their peculiar province to awaken inquiry, direct it in proper channels, and stimulate the energies of the laboring masses. That they have accomplished very much in this respect during the last decade, cannot be denied. We are indebted to them to a great extent for the increased attention which has of late been given to agricultural science. But broader and richer fields, sparkling with rarest gems, are opening before them; all the sciences are coming to their aid in clearing away the mists that have so long enveloped the great truths of Agriculture; educated intellect is anxious to pay its *devoirs* to those truths; the best disciplined minds of the age are reckoned in the lists of practical agriculturists. But whatever offerings science may bring, whatever discoveries she may make, actual experience must attend her *pari passu*.

Upon farmers, therefore, devolves a sort of moral obligation to give to the world, through the medium of agricultural papers, the results of their experience. And, dear farmer, when you experiment let me persuade you to do it with the *utmost care* and *exactness*—thus the *reflex* influence of your experiments will be no small part of the benefit resulting therefrom. When we can bring to bear upon the disputed points of agricultural science the careful experience of thousands of practical men, we shall have done much towards their settlement, and therefore, much for the benefit of the world. No subject offers a richer reward to patient investigation.—[Senior, in Genesee Farmer.

A NEW VEGETABLE PRODUCT FROM WEST AFRICA.—Among the various plants cultivated by the natives in the western part of Londar, is a species of gourd, the seed of which is held in universal esteem and constitute lucrative articles of traffic, on account of their manifold economical appliances. It is known by the name of *eguse*, is extensively grown, and is purchased with avidity at Sierra Leone, as one of the standard constituents of various dishes. There are two varieties of the gourd, known as the "male" and "female," the former being applied to the larger species, and the latter to the smaller and delicate varieties. Both are planted in April or May, previous to the raising season, and the young shoots soon overrun a large extent of ground by their rapid and exuberant growth. The fruit of the male "eguse" is a succulent gourd from twelve to eighteen inches in length, and four to five inches in diameter. The other variety seldom exceeds six or eight inches in length. Embedded in the pulp are numerous white seeds, nearly an inch long in the male variety, but smaller in the other. These seeds, when fresh, possess an agreeable nutty flavor, resembling that of the young almond or hazel nut. Their bland and nutritious properties render them very palatable adjuncts to the native edibles, and they are eagerly sought for. From both kinds a valuable and wholesome oil is procured, of a rich golden hue, and of a somewhat pleasant taste. The natives express the oil from the seed, after cleaning, drying and parching them over a fire, beating in a mortar, and reducing them to a fine paste, by compressing the paste between the hands, when the oil oozes forth. This beating and squeezing process is repeated until all the oil is expressed. This oil is used chiefly as a constituent of many of the native articles of diet, but is also useful for medicinal purposes, among others to avert attacks of dysentery and diarrhea. When pure it is an excellent substitute for salad oil, and is equally useful for the lamp, burning with a bright, clear flame. Its qualities are such that it may yet become a very valuable article of commerce with other countries. [Boston Journal.

TEACHING THE EYE.—The great majority of mankind do not and cannot see one fraction of what they were intended to see. The proverb that "none are so blind as those who will not see," is as true of physical as of moral vision. By neglect and carelessness we have made ourselves unable to discern hundreds of things which are before us to be seen. Thomas Carlyle has summed this up in one pregnant sentence, "The eye sees what it brings the power to see." How true is this! The sailor on the look-out can see a ship where the landsman sees nothing; the Esquimaux can distinguish a white fox amidst the white snow; the American back-woodsman will fire a rifle ball so as to strike a nut out of the mouth of a squirrel without hurting it; the Red Indian boys hold their hands up as marks to each other, certain that the unnerring arrow will be shot between the spreadout fingers; the astronomer can see a star in the sky, where to others the blue expanse is unbroken; the shepherd can distinguish the face of every sheep in his flock; the mosaic worker can detect distinctions of color where others see none; and multitudes of additional examples might be given of what education does for the eye.

THE OLD WOOD FIRE.—People who have seen an old fashioned wood fire, will recognize the truth of the description of "Peter Parley," as follows:

"The fuel was supplied from the wood lot—sweet-scented hickory, snapping chestnut, odoriferous oak, and 'reeking, fizzling ash.' It was a goodly sight to see these stalwart products of the forest laid in large piles, all alive with sap, on the tall, gaunt andirons. You might have thought you heard John Rogers and his family at the stake, by their plaintive simmerings. The building of a fire was a real architectural achievement favored by the wide yawning fire-place, and was always begun at daybreak. There was first a backlog from fifteen to four-and-twenty inches in diameter, and five feet long, embedded in the ashes; then came a toplog, then a fore-stick, then a middle stick, and then a heap of kindlings reaching from the bowels down to the bottom. A-top of all was a heap of smaller fragments, artfully adjusted, with spaces for the blaze. Friction matches had not then been sent from the regions of brimstone, to enable any boy or beggar to carry a conflagration in his pocket."

The California Farmer.

SAN FRANCISCO, FRIDAY, APRIL 10, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Helvin Fourth street, between J and K, City of Sacramento, where all are invited free.

"God made the Country."

If there is one season of the year, more than another, when the impress of the Deity is more fully stamped upon the face of Nature, it is the spring-time. Then the earth is putting on her new, fresh robes of living green; the bright flowers are peeping from out their beds of royal mother earth, and giving forth a sweet fragrance that is wafted forth to regale the senses of the true worshipper of Nature. The birds go forth to mate, and they send forth their happy carols as a thanksgiving for the beauty that is around them. The winds kiss the trees, and leaf after leaf comes out to ornament the naked branches, and fruit blossoms, too, come thickly to join in the worship that is paid to returning spring-time. The sun catches new fire, and sends its warming beams upon the earth, and hill and valley blush with the colors it gives to the gentle flowers that play in the lap of their nursing mother earth. The birds, the trees, and the flowers, all join in one glorious hallelujah chorus, to welcome spring, and every heart that sees, hears or feels beauty and truth, sees, feels and hears the great Author of Nature speaking to man, and saying, "the earth is full of His glory." It is to the country one must go to be most fully impressed with the many voices that come home to man amid the scenes that touch his heart in the country.

Go to the country, say we. Parents, take your children there! Brothers, take your sisters there! Husbands, break from the thraldom of business, and take your wives there! a nobler recreation and amusement than a game of tenpins or billiards, and will cost less. Teachers, take your pupils; and young men, take those whom you may hope to make yours in the future. Go to the country, and you will hear voices, see beauty, learn truths, that will teach you, be music to you, and be a source of joy to you that will forever tend to make you wiser, better and happier. Go to the country! Go to the country! for there you will find pleasures without alloy, and friends in nature that never betray.

Langerman's Garden.

We often read of the "oases in the desert," we often see them too, and that is not all; we believe *we know to enjoy them.*

A little time since we were invited to examine a place we had often heard spoken of very highly, and as in occasional perambulations we had been deprived of an opportunity, we resolved to make an especial visit to a spot where in Forty-nine we had wandered over a morass, an unsightly, uncultivated wild, a very wilderness, and supposed then would remain so.

Joining with some friends who we knew would enjoy the beautiful in nature, we visited Langerman's Garden, at the Mission. Although anticipating a very handsome garden, and a fine collection of flowers, and fine ones too, we were surprised to see so large and choice a collection. W. H. Langerman, Esq., of the firm of Langerman & Co., had taken this beautiful spot, made so by nature, as it abounds with native shrubs and evergreens, and by a liberal and generous expenditure of wealth, under the superintendance of a most excellent practical gardener, Edward Weimar, the place has indeed become an oasis in that *once* desert place.

A very tasteful cottage, elegantly furnished, stands embowered among the fine evergreen's, and surrounded by several conservatories filled with the choicest of plants, while the garden is laid out in pretty design, and filled with choice things. The collection of Roses, Camelias, and other plants, is very numerous and shows the attention of an experienced gardener. Some rare plants were of unusual growth. Young fruit trees in the garden were in abundant bloom.

Great praise is due to the gardener for his skill and care in producing so fair a show in the garden and conservatory; and we rather envy our friend Langerman this beautiful spot. Although we are a believer in progress, we did not believe we should see such a change as we have seen, within eight years, notwithstanding its being so prophesied by a friend of ours, with whom we were riding at that time over this very ground.

We were riding over this section in the September of '49, with the late lamented W. D. M. Howard, and he then said that in a few years all these grounds around the Mission must become valuable, and would become garden spots, and he then urged us to give our time and attention to this subject, and we remember the inducements held out to us to do so; but we cannot recall eight years, although we can recall his prophecy, now fulfilled, and the beautiful garden of Langerman is a verification of it.

Our visit to this pleasant place will long be remembered, together with the courtesies received for our friends and ourselves, and we trust that the brightest of flowers and the richest of fruits may always cluster around the happy home of this chosen spot.

Oakland Lyceum.—We are pleased to note a great interest at Oakland for a Lyceum, and a Course of Lectures; and we learned with a pleasing interest of successful Lectures of our friend of the Alta, E. Gould Buffum, Esq., who is most happy in all his efforts. Mr. Sals also made a happy impression at Oakland. Such Lectures should be like seed sown broadcast—go everywhere. The Oakland Lyceum is destined to be successful. Lyceums are the *breaking-up plows*, and flowers and fruit spring up where they are formed.

Oakland—Brooklyn—San Leandro.

Two weeks since we were on the "Oakland side," and enjoyed much. From thense we passed along the shore to visit those who love the country and its pleasures and find happiness there too. Would we could describe all the beautiful homes we found before crossing from that beautiful City of Oaks—the fine location of the Collegiate Institute, the grounds of Volney E. Howard, Esq., and Dr. Morse (under the care of Mr. Brown), and many others who are locating them upon that beautiful section, among them Messrs. Richardson, Harris, Vose, Judge Thorne, and others—after crossing the bridge all along the hillsides, no pleasanter spot could be found.

That gem of a spot selected as the residence of Gov. Foote, we esteem one of the most beautiful in the State, and we tarried willingly, for we were "at home" there. It is always pleasant to meet those you know stand ready to welcome you. We met friends here, and rested and were refreshed. Mr. and Mrs. Bliss, who occupy this splendid mansion, we were most happy to meet, and to partake of refreshment always so acceptable to a traveler; but most of all to meet kind friends and feel at home. It is indeed a bliss to find a home, and there *are homes* where Bliss is always found. The grounds and garden of Gov. Foote are beautiful in design, and will make one of the finest and most beautiful spots in our country.

Near by, also, we met by surprise an old friend and fellow voyager "round the Horn"—the pleasant residence and well-cultivated grounds of Mr. Patten—and in this meeting we lived over again the pleasant memories of "coming round the Horn." At several other fine gardens we spent a little time. The garden spots of Mr. James Bailey, Mr. Taylor, Mr. Eagan, Mr. Lacy, Judge Walker, of Brooklyn, all give promise of beauty and worth, and we rejoice to see the spirit of improvement visible there. A better system of cultivation is being adopted in all our towns and villages, and we rejoice to see it.

We visited Shell-Mound Nurseries, under the careful and practical eye of J. L. Sanford, Esq., and although Mr. Sanford has had his hands, head and heart fully employed by a prosperous business season as a nurseryman, yet his nursery ground, garden and all were in fine trim—fruit trees in bloom, roses and and rich flowers in luxuriant growth, and everything giving promise of a luxuriant season. Strawberries will be as abundant as the sands on the sea shore, and as large as—hens' eggs—*we have said it.* A pleasant spot and a good dinner kept us, and ere aware of it the dusk of evening was upon us, and a prospective ride to San Leandro, some six miles, over a new road, muddy, and dark night; but the *prospect* of a happy ending of our labor, and pleasant meeting of friends dispelled the clouds.

Before bidding adieu, we were presented with a bouquet of rich flowers, and such specimens as we have rarely seen—among them a spike of Gillia, surpassing in magnificence anything we ever saw, each flower upon the large truss like a rose, and the volume of fragrance from it equal to one. To Mrs. Sanford we were indebted for this beautiful bouquet, to whom, with her sweet little daughter, and to Mr. S, we return thanks for kind courtesy.

We reached San Leandro—safely—at last; but the road—the darkness—the fog—those deep creeks, and our lost way—we will not speak of these, for Carlysle says: "Look not mournfully on the past"—that is gone, and the happy welcome compensated for all we had suffered by a dark chilly night.

A night of rest, a bright morning, and a wish to see the prosperity of the farmers, gave cheerfulness even to weariness. A little after morning, however, the clouds gathered, "the rains descended, and the floods came," and we out in the fields caught a—nice wetting; but for all this visited the pleasant and prosperous farmers, orchards, and gardens of many of our friends that we found prospering. Among the prosperous farmers we found Messrs. Conroy & Brockway, Joseph Demont, F. F. Fargo (formerly in express business, now independent farmer), John Haas, Mr. Holland, Mr. Keeney, Messrs. Young, Taylor, Leland, Strong, and Mr. Southe, stock raiser; these are all men laboring to build up our State by building up Homes, and were it not for the unsettled titles in this vicinity and in other places, our land would be covered with ten thousand, yea, an hundred thousand more happy homes than at present, and more, many of the present residences of our farmers would give place to better homes, finely improved buildings and grounds. But until titles *are* settled, everything is unsettled. There is *one dark heavy blight only* that now rests upon the country and its prospects, and that is the unsettled titles; it behooves every good man, every well wisher to our State, to do all he can to remove this blighting evil.

We have conversed freely with settlers, and we find them ready and willing to do all they can for a just and equitable settlement of these troubles. It may be there are some few hard cases—and these will always be—but, we believe, that if large land owners will but come forward, in a spirit of generous and noble conciliation, and meet and adjust these long-deferred matters, a dark and heavy cloud would pass away, and great improvement would immediately spring up, and all real estate would rise in value, and the owners of these vast landed estates would be the gainers, two to one, for all the liberality they show.

The "Estudillo title," at San Leandro, is a great bar to improvement, by reason of the difficulty of adjusting it so as to have good improvements go on. There is no finer spot of country in the world. In richness of soil, in beauty of scenery, in salubrity of atmosphere, it has no superior; and we would say to our city friends—if you have the blues, or are a little dyspeptic, go over the bay; visit the Estudillo House, and you will be restored to perfect health. The gentlemanly proprietor, Mr. Mulford, and the courteous and attentive superintendent, Mr. Hannegan, will give you such a reception, and care for you so well, that you will not know how time passes. To them we were much indebted for kind attentions, for which we return thanks, and hope they will have a full house always, and, in consequence, a full purse.

A new Court-House is nearly completed, adding much to the appearance of the place; and would add more, if the architectural beauty of it was not spoiled by the want of finish of one end of the building. It looks at that point like a building sawed in halves. Oh, gentlemen of San Leandro, finish, finish, we pray you.

We visited several private gardens and new grounds being laid out and designed by gentlemen composing the officers of the courts and county, of which we shall speak in another issue. Our own visit was made most happy in a home circle of dear friends, the remembrance of which hangs round the heart and memory as pleasant thoughts, mingled with music and flowers.

Destruction of the Beautiful.

Sometime since we were at the garden of that famous Rose Grower, Sonntag, at the Mission Dolores, and then his prospect for roses was beyond description. Since then we have been shown his houses, which were partially blighted by foul air; and, still later, the cause appeared to be the effect of the chemical works near by. Mr. Sonntag showed us the foliage, and we suggested a careful analysis of the leaves, and other experiments, to ascertain the fact of the influence of this poisoned atmosphere. We saw the plants and leaves; they were spotted by many colors; in some leaves the color was extracted, and the loss to Mr. Sonntag must be several thousand dollars. This matter we esteem of vastly more moment than mere dollars and cents. Life—the life of our citizens may be effected by this, and it is important that this matter be looked into, If the atmosphere is poisoned by the chemical factory—it can be easily known—we have scientific men who will prove it, if so—the only remedy is removal. Life is of more value than property. Every citizen is interested in this matter. We know how dear to a *true florist* are the plants he has tended and watched with care, and when an injury happens to them the florist feels it. Even beyond their value in money—his love of his pets makes him feel it. And we hold that full damages should always be recovered against those who *destroy the beautiful.* We hope to hear more fully from Mr. Sonntag on this subject, for we remember a similar case; not where simple flowers were destroyed, but large trees, for a quarter of a mile were affected; some literally burned up and killed—leaving the place around like a forest of dead trees.

Sunset on the River.

If there is one moment more holy, more pure, more soul-satisfying than all others during the period of a man's day duties and cares, it is when the day-god declines in the far west; when the busy hum of labor ceases; when the cattle upon a thousand hills return to their allotted places; when the sportive lambs come frollicking home; when all domestic creatures gather to their own places, and the husbandman comes from the fields to greet his wife and little ones, and is serenaded by the birds of song as they offer up their evening vespers—this hour, this holy, happy hour is eventide, just as the twilight bends down to kiss the flowers, and the tears of nature come in pearly dews and unite in marriage with the fragrance of the flowers: it is at such a moment that the soul rises above earth, and feels its similitude to Him who holdeth the earth in the hollow of his hand. O, how dead must that creature be, whose ear is never opened to the sweet voices of nature, and whose heart never rises in thankfulness to Him, who has cast his lot upon so fair a spot of earth as our own beautiful Eureka State! And how happy and joyous are those who love to break from the thraldom of earth, and hold communion thus—blessed as such communion ever is—even alone with God and Nature. But is there not a deep voice in the soul that sighs for communion with kindred spirits to make the heart's melody complete?

Do not Disappoint Us.—We have once before remarked that as we travel over the country, we often meet the farmer at his labor in the fields, half a mile, one mile or two or three miles from his home and his *money purse*, and such becoming subscribers, they assure us we can depend upon the money being sent *immediately*; and believing they mean as they say, we in all good faith send our paper. Our terms being at the present low price of Five dollars, *always in advance*, we feel more grieved than angry if we are thus disappointed. We ask all to remember that it would be more beneficial to us *not* to subscribe, than to subscribe and lead us to hope and depend upon such promises. We therefore hope that in all such cases of backwardness, they will understand it leaves us under the impression they are *not as prosperous* as they said they were—and the only way they can remove that doubt is simply by remitting as they agreed. This can always be done by *mail, and safely too*; and if persons are particular, they can register their letters, and then there is no fear.

San Leandro Horticultural Society. There is a feeling among the Cultivators for a County Association, and this should be encouraged. We know great good would come from one successfully in operation in every county.

Report of the Committee on Agriculture.

We present our readers with the Report of the Committee on Agriculture, and the Joint Resolutions asking Congress for a grant of land for an Agricultural College for California. To the Chairman of the Agricultural Committee of the Assembly, and to the gentlemen of both Committees, and to all the friends of such a bill there will redound great honor by its accomplishment; and we have no doubt that our Delegates in Congress will promptly co-operate in so great and good a work.

Mr. Speaker: The Committee on Agriculture, to whom was referred the Joint Resolutions relative to Agricultural affairs, have had the same under consideration, and have instructed me to make the following report:

This branch of national industry, which now employs more than three-fourths of the labor and capital of the country, and which has, within our present territorial limits, a scope of ten hundred million acres of land, whereupon to expand and develop its immense capabilities, has been considered a proper subject for the care and encouragement of our government since its foundation.

Presidents Washington and Jefferson, and nearly all the chief magistrates who have succeeded them in the performance of a constitutional duty, in their annual messages recommended to Congress the true policy of enlightened legislators, by suggesting the propriety of legislative action to aid in the improvement and development of Agricultural pursuits.

The "Father of our Country," himself a practical farmer, saw the vast benefits which would result from the adoption of this policy, not only to the people engaged in these pursuits, but from the fact that they compose the sub-stratum upon which all other pursuits are mainly based; that the advantages would be equally distributed to all classes of citizens. The "Sage of Monticello," one of the great founders of our political system, whom we regard as good authority upon all questions of political economy, was equally impressed with the necessity of promoting, upon scientific principles, the advancement of this pursuit. Had the advice of these great statesmen received due consideration and action by the legislators of former days, the waste fields and deteriorated lands of the elder States would not now bear witness to the actual loss of national wealth, which may, in a great measure, be attributed to the indifference and disregard of these wise recommendations. But, while all other interests have been well cared for, this, the greatest of all interests, has, until within the last few years, been strangely neglected.

This indifference arose perhaps from two reasons: one was the great quantity of new lands without inhabitants and open for occupation to the emigrant, dissatisfied with the condition of his ill cultivated and impoverished fields; the other, a mistaken belief that this class of legislation conferred its benefits exclusively upon a particular class of citizens, and did not come properly within the legitimate duties of government.

As our "Star of Empire" can make its way no farther westward on this continent, and on the East, mountains and deserts intervene to separate us from the, to us, miscalled Western States, we are thereby admonished of the importance of preserving undiminished our Agricultural resources. By timely legislation in procuring reliable statistical information, and by acquainting ourselves with the character of our soil by the aid of science, we may do much to avert the exhaustion of the essential elements of the husbandman's products, contained in the soil of our now fertile valleys.

Everything we do to awaken attention to this subject, even though the instruments be cheap compared with the objects sought to be obtained, may confer lasting benefits upon the future condition of the State. The excess of production in this State, in the year 1853, of one article alone, which wasted without a market or consumption, was, by loss of labor and by extracting from the soil the elements which constitute vegetable production, destructive of as much wealth as one of the great fires of San Francisco; and this resulted from want of a little useful information.

One great want in this State is Agricultural statistics in a reliable shape—official shape—placed before the people in due season, showing annually the quantity of each article produced, as well as other information which it is not necessary to detail here. The value of these statistics in the instance above stated is best known to the Agriculturist, and the regular dealer in his products, but the benefits extend equally to all; the effect produced would be to relieve the miner, the merchant and the mechanic, from the support of an intermediate class of speculators, who flourish on the derangement and fluctuations of trade.

Your Committee will not extend this report by enumerating the many advantages which would result from the establishment of a Department at Washington, exclusively devoted to Agricultural interests; they are mostly such as cannot be effectually obtained by individual effort and private enterprise.

Concert of action between the National and State governments would, by enlightened legislation, produce all the desired beneficial results. Congressional committees of the last Congress have recommended the measure proposed in the resolution. The increasing wealth and population of our country, as a matter of course, affects a corresponding increase in the business of the Executive Departments at Washington. Hence the Secretary of the Interior, in his last annual report, says: "When the legitimate objects of the different departments are duly considered, it would seem that a re-organization of the whole had become necessary." The following further extract from his report, will show some facts bearing upon this subject. He says: "In addition to the business of the Patent Office proper, there has been devolved upon the Commissioner of Patents the supervision of the National Gallery, and the direction of the fund annually for Agricultural purposes. The former of their duties is comparatively of small moment; the latter of great and increasing importance. There seems no natural or immediate connection between the legitimate business of the Patent Office and the subject of Agriculture, except in their mutual relations to the industrial pursuits of the people. But the revenues of the Office being somewhat in excess in 1839, the Commissioner of Patents was authorized to apply $1,000 for the purpose of procuring Agricultural statistics. These were increased from time to time until they reached the sum of $5,000, when they remained nearly stationary for several years. In 1854 the appropriation was increased to $35,000, and made payable out of the treasury, and the appopriation of the present year (1855) has been increased to $105,000."

From these facts we see the advancement of Agricultural interests as a science, and aided by a national system for its promotion, is rapidly growing in favor with the people; and at the re-organization of the Departments at Washington, which must necessarily soon take place, this subject will occupy a prominent position and receive more attention than has hitherto been awarded to it. The Commissioner of Patents is presumed to be a person distinguished for his qualifications to investigate and determine questions relating to Mechanical Art and Science—therefore, it is clear that the supervision of the Agricultural Bureau is misplaced.

In view of the above facts, your Committee approve the first proposition contained in the resolution, which recommends the establishment of a department at Washington, exclusively devoted to the interests of Agriculture.

In regard to the second proposition, asking for a donation of 10,000 acres of land for the endowment of an Agricultural College, to be established in California, your Committee will only say that donations of land for similar purposes have been granted by Congress to other States, and, as an auxiliary, the national institution which promises soon to be established: from our peculiarly favorable situation to collect and test improvements in rural science, and introduce the cultivation of products now foreign to our country, an Agricultural College would probably be the means of conferring great and lasting benefits upon the State.

The collection and increase of knowledge in this, as well as in all other departments of science, are much facilitated in this State from the attraction hither, and intermingling of people from all parts of the civilized world.

One great obstacle to the successful introduction of improvements in Agriculture as a science in other States, has been the predisposition of the rural population to follow in the footsteps of their predecessors, and to oppose innovation, without first making an unprejudiced investigation. But here everything is new, and experiment and investigation are the order of the day. Here our genial clime has stripped the Agricultural pursuits of the hardships and privations which are incident to them in regions where extremes of heat and cold prevail. Here the life of the practical farmer is made easy and agreeable by the equal nature of our climate and the fertility of our soil.

What we want is a general diffusion throughout our State, and the whole Union, of knowledge relating to the Agricultural interests of California. Then increased immigration would come to stimulate all branches of industry, and distribute itself over our broad domain. Then thousands of young men now here, who, not being accustomed to laborious pursuits, shrink from the toils of the hardy miner, and who see imaginary hardships in the life of the farmer, would, if properly informed, turn their attention to Agricultural pursuits, cease to be a burden to themselves and society, and become useful citizens to the State. Then the miner, the merchant, the mechanic and the professional man would not repair to other lands to enjoy the fruits of their well-earned treasures, but would remain to enrich and beautify the land of their adoption. Then our valleys and hillsides would smile with neat cottages, blooming orchards and happy homes; and then society would be purified, the haunts of dissipation would be deserted, order come out of chaos, and every man might live in security under his own vine and fig tree.

Your Committee believe that this is the true object of legislation, and that an Agricultural College, established in this State, would have a tendency to promote the realization of these and many other valuable results, therefore your Committee approve of the second proposition, and recommend the passage of the "Joint Resolutions."

Benjamin H. Miles,
Chairman Committee on Agriculture.

The following were the resolutions offered by Mr. Miles, of Santa Cruz, which were referred as above:

Whereas, The experience of the past few years has established the fact that the agricultural interests of California are rapidly advancing to that pre-eminent importance which, by settling our lands with a permanent population, and relieving us from dependence upon foreign supplies, tends to secure the highest degree of prosperity to the State, and justly entitles this branch of industry to such aid and encouragement as may be legitimately afforded by the government.

And, Whereas, The variety of our soil and climate, together with the unequaled fertility of our valley lands, peculiarly adapt California to the successful production of nearly all the necessaries and luxuries belonging to the vegetable kingdom which enter into the wants of civilized life—

And, Whereas, The signs of the times indicate that the day is not far distant when we shall have an ample, safe, and speedy transit through our own territory, in the construction of the Pacific Railroad, to convey the produce of our generous soil to the markets of the East; it therefore becomes a matter of national concern that the agricultural interest of California should receive all the facilities and fostering support in the power of the Government to aid in developing its varied capabilities and unlimited resources; and believing that the establishment of an agricultural department at Washington, and agricultural college in California, would eminently promote the development of this great interest throughout this State and the whole Union, by collecting and disseminating material and information for the general diffusion of such knowledge as tends to promote this fundamental and most important industrial pursuit; therefore,

Resolved, By the Senate and Assembly of the State of California, that our Senators in Congress be instructed, and our Representatives requested, to use their best efforts to procure the establishment of an Agricultural Department at Washington, exclusively devoted to the interests of Agriculture, and that they endeavor to procure a donation to the State of California of one hundred thousand acres of public land, for the endowment of an Agricultural College.

Resolved, That his Excellency, the Governor, be requested to transmit a copy of the above preamble and resolutions to our Senators and Representatives in Congress.

A Popular Candidate.—A striking instance of popular favor was manifested during the election of city officers last Monday. Geo. R. Moore, Esq., was elected as City Attorney by almost a unanimous vote, being ahead of all other candidates nearly one thousand votes, and that number higher than any other city officer. Knowing the gentleman as we do, we say he is truly deserving such favors, and will look after the true interests of the city of his adoption, with devotion.

Sheep Shearing Festival.—We hope to lay before our readers the plan of the coming Festival in our next issue.

Overflowed Lands.

We give a synopsis of the Bill which has passed the Assembly, touching these important lands of our State, as it is necessary all laws relating to them should be thoroughly understood by our cultivators:

SWAMP AND OVERFLOWED LANDS.

Synopsis of the Bill which passed the Assembly March 28th, 1857:

SECTION 1. Provides for the sale of the Swamp and Overflowed Lands, donated by Congress, at the rate of one dollar per acre, to be paid into the Treasury as other State revenue, to be credited to the account of the fund for the reclamation of such lands, and be appropriated for that purpose as the Legislature may hereafter direct—the State reserving the right at any time to enter upon, use, and occupy of the lands sold, for the purpose of leveeing or otherwise reclaiming the lands, without compensation; provided, that the salt-marshes shall not be purchased or located until after the expiration of six months, except by persons located upon the adjoining lands.

SEC. 2. Requires the purchaser to file an affidavit setting forth that he has not purchased any other land under the provisions of this Act, and that he does not know of other legal or equitable claim to the land sought to be purchased; and he must cause the same to be surveyed.

SEC. 3. Prescribes the manner in which the records of the surveys shall be made and kept by the County Surveyor, and certified to by the Surveyor General.

SEC. 4. Provides that previous to, or at the time of filing the plat and field notes for record, the purchaser shall pay to the County Treasurer one dollar per acre for such lands, either in money or Controller's warrants issued for the payment of the expenses of the State, after the first of January, 1857, and take and record his receipt in the County Recorder's office.

SEC. 5. Directs the manner in which the County Treasurers shall pay over to the Treasurer of State the money or Controller's warrants received under this Act, accompanied with the proper certificates and description of the land and names of purchasers.

SEC. 6. Directs the Secretary of State to issue to the purchaser upon the receipt of the State Treasurer, a certificate description of the land and circumstances of the purchase, but he shall not issue a second certificate of purchase of the same lands, nor permit the name of one person to be substituted for that of another before the patent is issued.

SEC. 7. No person is allowed to purchase more than three hundred and twenty acres, which must be in quarter sections, except where a fractional section is sought to be purchased, then from other subdivisions the necessary amount may be taken to make up three hundred and twenty acres.

SEC. 8. Excludes from the operation of this Act all lands situated within ten miles of San Francisco or San Diego, and five miles of Oakland, or within the limits of any incorporated city or town.

SEC. 9. Requires all surveys to be made under the instructions of the Surveyor General of the State, and in accordance with the surveys of the United States; and no claimant shall hold more than one-half mile front on any river.

SEC. 10. Provides that upon the full payment of the purchase money, the Secretary of State shall certify the same to the Governor, who shall issue a patent for the land, which patent shall be *prima facie* evidence of title in fee simple in any Court of Justice in this State; but the lands must be certified to the State as swamp and overflowed lands by the General Government.

SEC. 11. Requires a fee of one dollar each for the certificate of the Secretary of State, and the patent for the benefit of the Library Fund.

SEC. 12. Guarantees to persons holding settler's claims, or claims by possession, upon swamp and overflowed lands, the protection of such rights, provided they, within twelve months from the passage of this Act, comply with all the requirements of other purchasers, and that they acquire no rights except by the provisions of this Act.

SEC. 13. All expenses attending surveys are to be defrayed by purchasers, except in the case of frivolous legal surveys.

SEC. 14. Repeals the swamp and overflowed land law, passed April 28th, 1855.

Black Hawk—A Splendid Animal.

The splendid Black Hawk stallion, "David Hill" takes his position for the season, as will be seen by the card in another column. No horse now in our State presents a finer form, or a character for higher excellence. Black Hawk David Hill was purchased, at great cost, of the original owner, David Hill, and was imported by A. J. Easton, Esq., the present owner, without regard to the expense in introducing so fine an animal into California. Mr. Easton sent an agent for the best animal he could purchase, and the agent selected "David Hill" and returned with him.

By the card it will be seen that so highly esteemed is this stock, that $500 is offered for the entire colts, at early age. This is the true evidence of the value put upon the stock of this noble animal.

Gen. Scott—Another Splendid Animal.

The fine stallion "General Scott" is now at Hattuck's Stable, Oakland, and, we learn, has attracted great attention for the elegance of his figure and action. Such animals are of great value to a country as new as ours, and those who are now introducing them are doing great good to the State. We hope to lay before our stock growers the full pedigree of all such animals in our advertising columns.

Bill Blossom.

We would also desire to call the attention of breeders of fine stock, and sporting men in general, to this splendid animal, who will make a season at Tattersall Stables, Oakland, from the 15th of April to the 1st of August. The proprietors challenge California for any trotting or pacing stallion, one mile heats, best two in three, or best three in five (harness), for from $1,000 to $5,000, over the Pioneer Course, San Francisco. This alone should wake up the lovers of the turf, and we hope soon to see some good young colts that will at no distant period compete with the world both for speed and beauty of form.

INFORMATION WANTED—Of CHARLES DOUGLAS CLARK, native of Aberdeen, Scotland. When last heard from (15th June, 1854) was at Salmon River, Shasta county. Any information regarding said person will be thankfully received at the office of this paper, 130 Washington street, San Francisco.

THE CELEBRATED

PACING STALLION,

"BILL BLOSSOM,"

PEACOCK STOCK, AND FULL BROTHER TO THE CELEBRATED TROTTING STALLION

"FRANK PIERCE,"

NOW OWNED AT WHITE HALL, NEW YORK, WILL STAND FOR MARES AT

TATTERSALL STABLE, Oakland, Alameda County,

At $100 Per Season!

FROM APRIL 15TH.....TO AUGUST 1ST, 1857.

TERMS CASH---IN ADVANCE.

HE IS A CHESTNUT SORREL, STANDS FOURTEEN AND A-HALF HANDS HIGH, AND IS SEVEN YEARS OLD this Spring. He is a SURE FOAL GETTER, having never failed in any one instance. "BILL BLOSSOM" was bred in Canada by D Prevee, and imported from there by O. C. Gunn, to Albany, N. Y., and from thence to California. While he was owned in Canada he was known as "Canada Peacock;" and when four years old challenged all Upper and Lower Canada. He has never yet been beaten, and challenges now the United States for any Stallion Trotter or Pacer, one mile heats, best two in three, or best three in five (in harness), for from $1,000 to $5,000; and any Trotting Stallion in the State, two mile heats, best two in three, for $1,000 to $5,000 (in harness), over the Pioneer Course, San Francisco.

While in Albany, he challenged New York State. He had two races, and won them. He has had two races in California, and won them also.

☞ Gentlemen having Mares at a distance, may be assured every care and attention will be shown them at a moderate charge, and good pasturage for them.

For further particulars inquire of

HOLSEY I. YARRINGTON, AGENT.
At the Stable.

v7-13 tf

SPECIAL NOTICES.

☞ **OXYGENATED BITTERS.**—*The annexed statement of Prof. A. A. Hayes, M. D., State Assayer, is ample testimony of the scientific manner in which this medicine is compounded, and recommends it to the Professional Men.*

An opinion having been asked for of me, in consequence of the formula for preparing Oxygenated Bitters being known to me, I express in the following form:

The composition of these Bitters includes those medicinal substances which experienced physicians have long resorted to for special action on the system, when deranged by Fevers, Dyspepsia, Agues and General Debility, resulting from exposure or climate influence.

These are rendered permanent, and remain active in this preparation *as a consequence of the scientific manner in which they are combined.*

It is a well founded inference, that the preparation, used in larger or smaller doses, would prove a valuable *General Medicine*, which experience has demonstrated.

In this medicine, no metallic salts can be found, by the most delicate chemical trials.

Respectfully, A. A. HAYES, M. D.,
Assayer to the State of Mass.

No. 1 Pine street, Boston, 16th Dec., 1852.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their Agents everywhere.

Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 11-1m

☞ **FLAX SEED.**—We have just received several cases of very superior Flax Seed, from the East. It is of very superior quality; and there is no doubt but it can be grown here more successfully than in any other State in the Union. We really hope many will be induced to try this most valuable article. We are ready to furnish all who would like to try it as an experiment, with small parcels, *free*, if they will try it carefully. Those making it a business can be supplied in large quantities.

WARREN & CO.,
v7-10 130 Washington street, San Francisco.

☞ **TO STOCK RAISERS.**—We earnestly invite stock raisers of all kinds to advise with us and give us information in regard to such stock as they may have for sale, and all the particulars of price, quality, &c. We are often inquired of relative to such matters, and can always find purchasers for almost all kinds of extra stock. Valuable stock will always sell; and we intend to keep a register of all such stock as may be in market, and assist in finding purchasers for it, and to do everything in our power to further the breeding of good stock.

v7-10 WARREN & CO.

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

☞ **BEAUTIFUL GIFT.**—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.
BY MRS. E. W. WIRT, OF VIRGINIA.

For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.

WARREN & CO.,
State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

BOOKS FOR GARDENERS.

JUST received, at the office of the FARMER, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

☞ **READ—Copies of the Farmer for Mailing.** That all may have an opportunity of sending the FARMER to their friends in the East, so as to make known the resources of California, we have

Reduced the price to Twelve and a-half Cents per Copy.

It will hereafter be found at the following places:

J. W. SULLIVAN, ULLMAN & CO., } Post Office Arcade.
NOISY CARRIER'S, Long Wharf
HUTCHINGS & ROSENFIELD, Montgomery street.
BOOK STORE, corner of Clay street and the Plaza.

At these places can also be found copies of the State Society's Reports. Price 50 cents.

The FARMER will also be had ready for mailing at all times at the office, at $1 50 per dozen; also single copies.

WARREN & CO., Editors and Proprietors.

A CARD.

☞ THE Report of the Agricultural Society, for the year 1856, including the full Reports of the Visiting Committees to the Farms and Vineyards throughout the State, Reports on the Exhibition, the Annual Address of the President, Address of Col. J. B. Crockett, detailed list of the Exhibited Articles, the Prize Essay on the Potato, with other important matter, is now issued in a neat Pamphlet of about eighty pages, illustrated. Persons desirous of obtaining copies will please address the Office of the CALIFORNIA FARMER, when copies will be forwarded as per order. Price Fifty Cents.

For sale at the Offices of the CALIFORNIA FARMER, State Agricultural Society's Rooms, Sacramento—and at No. 130 Washington street, San Francisco. Also, at Ullman & Co's, J. W. Sullivan's, J. J. LeCount's, San Francisco; Dr. J. C. Cobb, and J. B. Manny, San Jose.

☞ NEWSPAPER ROUTE FOR SALE.—We can offer a good Route for the city of San Francisco, and one for Sacramento, to one who has the taste for making known our journal. A very profitable route can be thus secured to active and experienced men.

Pacific Mail Steamship Company's Line

Estudillo House,
SAN LEANDRO, Alameda County.

THE subscribers respectfully inform their friends and the public that they have purchased the interest of the former proprietors in this popular and well-known establishment, and trust, by strict application to business and attention to the comforts of their patrons, to merit a share of public patronage. It is their intention, as soon as practicable, to make great improvements on the premises, and their patrons may rest assured that none but the choicest of Liquors will ever be found at their house. The table will be supplied with the best the market affords, and the rooms are furnished in a manner not to be surpassed by any hotel in the State.

To those of our friends who may not be "posted," we beg leave to say, that our house is located at the county seat of Alameda county, six miles from San Antonio, to which place the Contra Costa boat makes three trips a day. Stages leave San Antonio immediately on the arrival of the boat, and return in season to meet her on her return trips.

San Leandro is situated on the main road to San Jose, in the center of the finest farming district of country in this State. The easy access from the city to this delightful village, renders it a very desirable place of resort for gentlemen with their families who may wish to retire for a season from the bustle of city life. The house is admirably adapted for the accommodation of families, and particular attention will be paid to those who may honor us with a visit.

The long experience of Mr. Biggs, formerly one of the well-known firm of Biggs & Kibbe, is sufficient assurance that the public will always be able to find, at this house, the choicest articles that the market affords.

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently *irregular* when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakespeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for oursel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promotes habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,246 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

A Gardener at Shares.

AN excellent opportunity can be given to a good practical as well as scientific gardener, for a series of years. To a person who could command a moderate capital a chance will be given that is permanent, and certain of paying very handsomely.

None need apply unless they can produce the very best testimonials as to ability and character, and one who is free from embarrassment, and can answer the advertiser fully.

A note addressed to "B. C." through the FARMER Office, with real signature, will receive prompt attention. v7-5 tf

A House and Garden Wanted.

A PRACTICAL working Gardener would like to take charge of some house and land, to keep it in order and improve it for one or two years, only requiring as payment the perquisites he could make by extra cultivation and sale of vegetables, &c., such as could be grown while keeping the place in order and safety.

Any person going East, or who wish a place kept in order for one or two years, without cost, can have satisfactory bonds that this will be done, if it is a good place, by addressing "T. Y. F." through the FARMER Office, with real name: then the advertiser will call on them.

☞ Please state where the place is. v7-5 tf

[PREMIUM MANUFACTORY.]

Hudson's Golden California Mustard.

THE proprietor of this manufactory would invite all who feel an interest in California productions to visit his establishment and examine his Golden Mustard. This article is made of California Seed of the very purest quality, and put up in tins of 10 lbs., 5 lbs., 3 lbs., 1 lb. and ½ lb., and in glass of 1 lb. and ½; and it can be had at prices lower than Eastern prices, and at the same time proved to be purer and better than the imported.

The proprietor also manufactures a very superior article of Salad Oil, to which he desires to call the attention of the public. Sample bottles of his make will be sent to hotels and large purchasers when desired.

For any further information regarding this Mustard, we refer to the principal business houses in this city.

Purchases at wholesale or retail are specially invited to call at the office,

22 Front street, corner of Pine,
H. C. HUDSON.

P. S.—The highest price always paid for pure A No 1 Mustard Seed. v6-20 3m

[For the California Farmer.]

AN IDEAL BEAUTY OF THE MIND.

The mind often wanders in its waking hours, as well as at those periods when the body is at rest. The body holds little or no power over the mind; that acts independent, and if for a while these wanderings are interrupted by worldly matters, when rest again reposes the body, the mind assumes its power and action, and unites again upon themes upon which it dwelt in its waking hours. So was it with the writer who now records

A DREAM.

An "ideal beauty" had been my theme,
When, strangely beautiful, in a dream
There came a vision like a meteor bright,
And stood before me in living light.

A form so majestic, a being so fair;
With a smile so radiant—a Medicii stood there:
An eye full of fire, but like gentle Gazelle,
Every flash, like the starlight, touched my heart with a spell;

My soul was in raptures, so blissful swelling,
That the pulse of love at the heart strings were thrilling;
Then a music so sweet, lulled my senses to rest,
And my "dreams came like soft winds from Araby blest."

MORDANNT.

TO ——.

Go where I will, within my heart, dear friend,
Entwined thy image with my thoughts will blend:
Oblivion upon the past can have no claim;
Remembrance of thee will e'er remain the same,
Go where I will—whate'er may be my lot,
Earth has no place where thou will be forgot.

The Pleasant Memories of Youth.

[We give our right hand of welcome to our new and happy correspondent "Florence Percey." Many hearts will be affected as the record is read of the pleasant memories of Florence Percey, and deep sympathy will be awakened to know one so gifted, one whose voice comes to us like the thrilling tones of sweetest music mingling with our dreams of happiness. We know we can bespeak the glad greeting of all intelligent and pure minds, for one who can so truthfully delineate the brightest pictures of our brightest periods of life. We feel proud to know we shall often be permitted to send pleasant thoughts to our readesr, from Florence Percey:]

Dear to our hearts, are the days of youth! Through the mist of time, we dwell on their remembrance. In the twilight of age, we recall the bright sunny hours of morn. How fresh on Fancy's eye, amid the darkened room, comes the thought of those joyous days which have been ours. I ask not gay landscapes, or gardens of flowers; I ask but to wander where in infancy my footsteps strayed; where the rocks and the mountains with their snow-flashes, gleam through the morning sun; where oft I have marked the cataract's foam, and heard the rolling wind, as it swept o'er my own Highland home. I care not for verdure and flowers—such beauties are not for me. Give me the snow-capped mountains—the wild and majestic crags, with their steep frowning glories; where the gale sighs on the overhanging rocks. Blessed spot of my youth! Thy heavy branches bend and sigh as the wind sweeps on, and fans the cloudless sky—where oft I've wandered forth to muse alone, or trod, with those I loved, thy wild and rugged steeps—wandered with those, who now like me, perchance, deplore, the happy scenes of their childhoods' earliest home. Can you recall to view, one scene so much beloved as those where Youth has twined for you her brightest garland? Can hoarded treasures, or the fevered dreams of ambition, bestow so sweet and soothing a balm, as the raptured visions of our childhood's home? Who hath not felt the voiceless thoughts, sink on the heart, with a deep and soothing power? thoughts we would not speak—feelings which are nameless but dear, unmixed with worldly griefs; inviting the heart to recall the past, to recall scenes that steal into the soul, bearing it back to years gone by. How often will such "sweet dreams" steal o'er my soul and beguile it of its grief. They will shed a gleam o'er my pathway, enhancing pleasure's wild throb and bearing to the heart a language which has ne'er been told to the ear; lingering there to shed in the shade, bright smiles! Oft will they chase away the gloom from my brow, and bear me back to that dear-loved retreat, where we whiled the laughing hours away, with tales of vanished days. Oh! scenes of my youth, oft have I thought if aught could soothe the hour of death, 'twould be to know that my humble grave might be, where my bosom had loved to dwell. Methinks 'twere sweet to die, with the fond dream, that where my heart had lingered, there it might lie—there I might sleep in sweet repose, beneath the spot I loved; where the tempest might sweep above its tufted shade—where those my soul acknowledged here, might mourn above my lonely tomb—and by those few cherished friends, deplored, to whom in early days allied. But this may not be! I sometimes think those days again may come—though the present often brings thoughts that check my bosom's fond hope. Yet, I trust that the broad wing of Time, will still shed some spring's dews round the flowers, where it is the delight of smiling youth to dwell, and where hearts swell with rapture over the remembrance of days, when they roved, a wild untutored child. Oft in some fleeting dream, visions of happy smiles press round my heart, and I hear, in my rest, the voice of love, calling me. But ah! I hear—I wake, and it is fled—'twas but a dream—no loving smile greets my wakened sight. But why do I brood o'er those hours of joy, why listen to the past? Because it is, to me, a sweet and silent employ. While my heart thinks upon the future, with hope and fear unknown, I look on the past and a sigh will come as I turn each checkered leaf, to view those sable lines of sorrow and blot them with a tear. Oh! regretted friend—perhaps henceforth lost to me except in dreams. Blest spot of my youth, to which I now must bid a long, perhaps a last adieu. May joy forever, o'er thy hills preside. I quit thee with tears, the saddest that from my eyes shall flow; and when, in solitude's calm hour, when silently its broad wings are spread o'er land and sea—then believe that my soul, dear friend, will be mingling then with thine—when on evening's dark brow, the stars are beaming, and she walks, in grandeur, forth—then think, that with delight, my spirit looks on. When on life's ocean, are bounding our frail vessels, and death and danger surround our dark pathway; when the bright meteors of destruction dance before us, then, oh! then, the light of friendship's lamp will gleam o'er the waves, and shed, if we are lost, its sweet light o'er our graves. And now, farewell, bright scenes of my childhood, too bright, too beautiful to last. My heart-strings will ever cling round my early home and friends. Oblivion dare not fling her dark mantle of forgetfulness, over things of the past, which memory holds so dear.

Florence Percey.

[For the California Farmer.]

The Slighted Maiden.

'Twas nightfall! the last glow of departing day flung its pensive glory over the restless waters, dying with brightest hues the sparkling tide; beaming for an instant its fleeting rays o'er rock and hill, till the dark cliff and glowing vale seemed melting into life. The scene has roused from her revery, a maiden, who sat gazing from her lattice, far out upon the dark blue waters. What does she murmur, as she lean's over her neglected harp? What thoughts flash from those full dark eyes, and cause that cheek's warm glow? She now rests her head upon her hand, and her hair, which has escaped from its confinement, falls on her neck in rich masses. The dark lashes of her eye, trembling, lie upon her flushing cheek, and as you gaze you can trace on her lips a smile. She dreams—soft, subduing memories steal over her unfettered spirit. She breathe's a name—'tis his who first in that shaded bower had whispered love. She sees his dark and flashing eye again upraised to hers; the springing step with which he was wont to seek her. Could you have seen his manly form, and beheld his high, bold spirit flashing in his eye, you would not wonder that she loved. But hark! what has aroused her. Why does she start to the lattice and scan with such searching glances the way from whence comes the sound—the tramping of an impatient steed? What has sent that burning glow on her brow? 'Tis he! her own loved Herman. With trembling hand she tries to shade the beams from her face, which blind her gaze, as breathlessly she watches his approach. But why gasps she for breath? Why that cheek so pale? The steed! the rider! both have passed; and not a look did her false lover bestow to where she stood: now fixed as marble; nought revealing that there was life, but her gasping breath. She heeds not the passing hour, as with blanched cheek she leans over her harp. Oh! could she but weep, it would relieve her over-burdened heart. She now turns to her harp and attempts to wake the trembling tones again; but as she sweeps her hand over the quivering strings, the chord snaps with a mournful sound. She starts! she sinks beside her harp, and tears—"afflictions' sweet relief"—flow long and fast from her streaming eyes. Alas! the past had been all one bright vision; but now the dream from her heart had faded—she must wake to life's realities. Long did the maiden weep: then there rose in her breast feelings deep and strong to combat with her deep sorrow. And with pride did she own that there was strength within her soul, unknown till then. Tears still trembled in her eye; but she dashed them firmly away, and, with erect form, shrank no more from the gulf's fearful brink, but looked calmly down and sought to stifle each rebellious thought. She knew that never again could those trembling chords of her heart be awakened.

"For love there is no death, no disfigurement, no decay; it dwells forever in the realms of eternal life and beauty. Wert thou but granted me, oh! enviable lot. Might but one loving heart beat over me when mine ceases to beat; one tear of sorrow fall on my pallid cheek; one trembling hand support my head—surely my sleep of death would be softer and sweeter."

Edith Plantaganet.

[For the California Farmer.]

A Short Note to Adda.

"I like Adda," said I, as I read over a sketch of hers, "and I will tell her so." Under this impulse I took my pen, dipped it into the ink, and laid my hand on a sheet of foolscap. Here the question arose, how should I begin? I could not say, Dear Adda, for that would twang of impudence. I could not say, Friend Adda, for we are strangers, and she, perhaps, would not recoguize the saying. So Adda, you may choose any epithet known to any language, and consider it written where it should be, and all this stuff not written where it should not be, and we will begin:

Well, I like your style; there is no affectation about it. You appear to say just what you think; but in one place, Adda, you *think* wrong. You say: 'that men *may* make themselves really quite comfortable when necessity demands the effort." Now I generally like to let ladies have their own way, but if you had put the word *appear*, in the place of the word *really*, I should have liked that sentence better. I profess to know something about these things, having kept Bach. for five or six years. It is true that we can keep the old clothes out of the front yard; we can wash the dishes, and find a better place for the "dish-cloth" than the mantlepiece; but to talk about *comfort* without a lady, is something that the most impudent old bachelor among us would not dare do.

Had you have asked those bachelors that you called on if they were comfortable, they certainly would have said that they were not. All of us have a "craving void left aching in the breast." You found there Harper's Magazine and the California Farmer; I *take* both these, but I would rather *take* a Wife than to take all the magazines and newspapers in the world. I can't enjoy a good paper by myself; neither could those old fellows that you tell of. It never was intended that man should live by himself, and he violates a law of nature when he does it; and no one can violate nature's laws and be "comfortable." Then you might ask, why there are so many bachelors in this country? I will tell you: Most of us left our old homes several years ago, and all the young ladies that we then knew have grown up and got married. Were we to go back there, it might take us some time to get acquainted with, *court* and marry one of the new ones that have taken the place of our old sweethearts. There are not many of us that have time for this. And we are actually afraid to fall in love with a California girl, because they have got the idea into their pretty little heads, that they have absolute power here. They think that they can act the coquette as long as they please, break as many hearts as they can, and marry when they like. All general rules, however, have their exceptions, and I received the impression somehow that Adda was one of the exceptions. That is the reason why I said, "I like Adda."

But, perhaps you are not one of the *girls?* if you are not, then some man is in luck; that's all I've got to say about it.

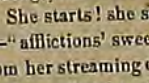
Well, as I headed this "a short note," I had better stop, for if I go on it wont be short. So I must say, farewell, and subscribe myself,

Your friend, The Author of —— &c.

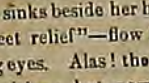
One's Mother.—Around the idea of one's mother, the mind clings with fond affections. It is the first thought stamped upon our infant hearts, when soft and capable of receiving most profound impression, and all the feelings are more or less light in comparison. Our passions and our wilfulness may lead us from the object of our filial love; we may become wild, headstrong, and angry at her counsels or opposition; but when death has stilled her monitory voice, and nothing but calm memory remains to recapitulate her good deeds, affection, like a flower beaten to the ground by a rude storm, raises up her head and smiles amidst her tears. Around that idea, as we have said, the mind clings with fond affection and even when the grief at our loss forces memory to be silent, fancy takes the place of remembrance and twines the image of our departed parent with garlands of graces, and beauties and virtues, which we doubt not that she has possessed.

Advice to a Bride.—I beg to remind my new daughter that the husband has a thousand elemens of disturbance in his daily avocations to which his wife is an utter stranger; and it will be her privilege, and her title to the respect of all whose respect is worth having, to make his own fireside the most attractive place in the universe for the calm repose of a weary body or excited mind. The minor comforts, which are most valuable, because the most constantly in requisition, will depend more upon her look, her manner, and the evidence of her forethought, than upon all the other occurrences of life.

PACIFIC MUSEUM,
Corner of Clay and Kearny streets.
INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!



THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Worf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.



Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montes.

☞ A full Brass Band is in attendance every evening

Our Stock consists of
One Hundred Thousand Trees,
FROM FOUR TO ELEVEN FEET IN HIGHT.
Apples, 80 best varieties;
Pears, 25 "
Cherries, 21 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;
TOGETHER WITH
Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.
Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.
Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.
Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.
Catalogues can be obtained at the Nursery, or mailed to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.
☞ Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.
All communications addressed to the subscribers will receive prompt attention.
v7-1 3m SMITH & WINCHELL.

Smith's Pomological Gardens
AND
NURSERY.
On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of
Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants
to be found in any one establishment on the Pacific Coast. Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.
FRUIT TREES—fine, vigorous, and in every variety of the following:
Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.
ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.
Among the fine Trees are the following varieties:
Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Allanthus, and China Trees.
Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.
We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.
ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.
Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.
GARDEN SEEDS.—1,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.
☞ Catalogues furnished to applicants.
☞ Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.
A. P. SMITH.

NOTICE.
We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.
Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.
☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.
v6-19 3m A. P. S.

San Jose Nursery.

THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of
FRUIT AND ORNAMENTAL TREES.
ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.
Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 69 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.
The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer
Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.
In each of the above the very best and most approved varieties.
The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—
Black and Honey Locust;
Chinese Allanthus, Catalpas.
—Also,—
20,000 Mulberry Trees,
All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.

ROSES! ROSES!! ROSES!!!
In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 96 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.
The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.
Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.
Address letters to L. PREVOST,
San Jose City, Oct. 16, 1856. v6-13 4m San Jose City.

Benicia High School.
THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by Cornelius J. Flatt, a graduate of the New York State Normal School.
This is the oldest Boarding School in the State.
The next Semi-Annual Session will commence on the 17th of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.
A daily account of recitations and deportment will be kept and sent monthly to parents.
The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.
TERMS: PER MONTH
Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective Draughting and Book-keeping) $10 00
Tuition in the Common English Studies 6 00
Tuition in the Ancient or Modern Languages 5 00
Board (per week) 3 00
Washing (per session) 25 00
Private arrangements will be made for Instrumental Music when required.
No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.
For further information or references, address the Principal.

Consignments of Trees and Agricultural Implements attended to.
J. R. RAY,
v6-9 90 J street, Sacramento.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.
THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.
NEW CHINESE SUGAR CANE (Sorghum Sucre).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.
Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.
Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

CHINESE SUGAR CANE,
OR,
SORGHO SUCRE.
PURE SEED.
THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:
First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.
Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.
Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.
This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a half, will be furnished by mail at $1 00 each, or at $1, if sent by express, freight unpaid.
Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.
A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.
Address, with plain directions for mailing or shipping,
W. P. ORME, Atlanta, Georgia.
Atlanta, November 7, 1856. v6-23

SEEDS.
HOVEY & CO.,
DEALERS IN SEEDS,

The Farmer's Drill.

[PATENTED, AUGUST, 1853.]

The celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct. 29th, 1853; at the great State Agricultural Fair of Pennsylvania, held at Reading, on the 27th, 28th and 29th of September, 1853; at the York County Fair; and, in short, wherever brought in competition with other drills, and cannot fail to supercede every other.

The undersigned empowered to act as Agent for California and Oregon. The undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately had one sent by Clipper.

The Machine offers superior inducements to mechanics who may wish to engage in constructing them. The right of sale in the State will be disposed of on reasonable terms.

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,

SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

MEDICINES, &c.

J. L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night:

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

PROSPECTUS OF VOLUME VII. OF THE CALIFORNIA FARMER.

THE CALIFORNIA FARMER was established in January, 1854; its success was a problem that the future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the virgin soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer FARMER expected to meet with obstructions, trials and difficulties, that would try our strength and temper too. But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he must meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—so our humble selves in the enterprise of the Farmer we then presented, we had faith—we were willing already to labor and toil—to do and to suffer—cer[illegible] long the goodness of the cause we had es[illegible] and beneficial influences, with dignity, nobility, [illegible] perity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good—to them we and our cause are known—our desert at their hands is manifest.

To those who are strangers to us and the journal we publish, we again present the CALIFORNIA FARMER.

Our journal is devoted to Agriculture and all the useful sciences—it will ever be our aim to have the Farmer the true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the TRUE friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Homes of our glorious State. Free from every political, sectarian, or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that our means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication, we have access to facilities for information rarely obtained.

In the department of Education, of Home Influences, we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artisans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall esteem most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it in comparison, and abide the issue.

With grateful acknowledgments for a generous sustaining in years of trial, and with the assurance to our patrons of many improvements in the opening year, we ask their continued favor and generous influence for this journal.

The terms of the FARMER are, for the year (always in advance), $5

Offices of Publication—130 Washington street, San Francisco, and State Society's Rooms, Fourth street, Sacramento. WARREN & CO., Editors and Publishers.

January, 1857. 4 tf

THE SACRAMENTO "MESICK TITLE."—The well known "Mesick title" of Sacramento has been declared fraudulent, by Judge Monson, in a case which had gone before him in the District Court. This is a most important decision, and affects possession of the homes of many citizens of Sacramento city. The Union remarks on the subject:

Were this a simple decision of a fact at issue in law, no unusual importance might be attached to it, because the case will necessarily have to undergo the investigation of a higher and ultimate tribunal; but it is not a simple decision of a mooted point—it is a critical and elaborate exposition of the law bearing upon the case in all points of view, showing the most careful research, and furnishing at least some assurance of what the ultimate decision may be. In this respect, it is of more than ordinary interest. Although it may be that points have been overlooked which will come up before the minds of the higher tribunal, in the course of their investigation, yet, to the ordinary reader, the arguments of Judge Monson cannot but be irresistible. We understand that no briefs were filed by the counsel for the defendants during the pendency of the case before the District Court.

ACKNOWLEDGMENT.—We are indebted to our friend Colman, formerly of the Humboldt Times, for a specimen produced at the Gas Manufactory, composed of sulphur and lime—a very powerful compound substance, suitable for renovating cold lands. We hope some particular attention will be paid to this article, quantities of which can be had for land, and from its use we anticipate important results. Those who may try it are requested to report to us the result.

PHOTOGRAPHS.—The art of photographing is one of exceeding skill, in order to present the full beauty of a picture. When artistically done, the likeness resembles a fine, soft oil painting. Those who have not yet seen these perfect specimens of art should go to Vance's at once.

THE ELECTION IN SACRAMENTO.—The Municipal Election, last Monday, resulted in the choosing an entire Democratic list of officers; all good men, we believe.

OLD BLOCK.—A. Delano, Esq., of Grass Valley, is noticed as on his way to this city. He reports business in his locality as flourishing, and of course the mountain air as healthy.

TOBACCO.—The Trinity Journal acknowledges the receipt of a fine lot of native tobacco, raised last season by L. Drake, Esq., of the Clement House, Taylor's Flat.

FEMALE PEDESTRIAN.—Mrs. Dallison, the female pedestrian, is reported to have accomplished the feat at Marysville, of walking seventy hours on a plank forty feet long by two broad, and as about to try the same feat at Oroville.

SANTA CRUZ FARMING.—The Sentinel mentions that from the Pajaro and San Juan valleys very flattering accounts are received of the prospects of the coming harvest, and that agriculture has received more attention this year than ever before known.

THE mountain or California lions have of late made fearful desents on bars that are settled in Trinity, says the Journal. It seems that strychnine has no effect upon them.

AN Artesian Well being sunk at San Jose, struck a medium-sized stream of water, at a depth of 340 feet, and further sinking was deemed unnecessary.

IT is expected a steamboat will soon ascend the Sacramento river to a place about a mile below Clear Creek, in Shasta county.

STEAMBOAT POINT.—The building of vessels, says the Town Talk, at Steamboat Point, is being prosecuted with great vigor. At the southern end the frame of a new steamboat for the Petaluma trade, is being put up by Mr. P. Tierman, for Charles Minturn, Esq. She is 152 feet keel, 30 feet beam, and is to draw two feet six inches. She will be finished in a couple of months. To the west is the framework of a new boat for the Alameda trade, building by John West for the same owner. She is about 150 feet keel and 35 feet beam, and will be finished in [illegible] weeks. Adjoining her, a stern-wheel boat, built for Mr. Grinnell, by the same builder, is nearly ready for launching. She is about 120 feet keel, 28 feet beam, and is to run up the Feather river. To the right, a schooner for the southern coast trade, is nearly ready. The steamer Sophie is on Neefus & Tichnor's railway, repairing.

FIFTEEN INDIANS KILLED.—At the Hay Fork, on the Trinity river, on the 23d ult., some Indians who lived in that vicinity (so the Shasta Republican is informed), became intoxicated upon some liquor furnished them by white men, and in that condition went to a tent where a lady was living and drove her away. Some of the citizens in that vicinity, hearing of the outrage, attacked the Indians and killed fifteen of them.

HOLLOWAY'S PILLS possess the most astonishing power in the cure of general debility, and in renovating the system. The surprising effect of these wonderful Pills is such as to restore health when it appears lost forever. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box.

WILD CHERRY.—We hear so much said of the wonderful curative power of Dr. Wistar's Balsam, in all stages of diseased lungs, that we feel perfectly safe in recommending it for general use for coughs, colds, bronchitis, &c. None genuine unless signed I. Butts on the wrapper.

ALAMEDA TROUT STATISTICS.—It is estimated, says the Alameda Gazette, that over three thousand mountain trout, varying from four to fourteen inches in length, have already been taken from the creeks in Alameda county, this season. Some have exceeded 14 inches.

EVERY pound of cochineal contains 70,000 insects boiled to death; and from 600,000 to 700,000 pounds are annually brought to Europe for scarlet and crimson dyes.

LETTERS FOR THE FARMER.—Our correspondents can now address us either at San Francisco or Sacramento, as shall be most convenient for them. Letters, &c., addressed to us at either place will be promptly attended to. Our exchanges will please forward their favors to us at San Francisco, and publishers who are in correspondence with us will hereafter please forward their works for review to San Francisco.

OYSTER SALOONS.

CHOP, OYSTER AND CLUB HOUSE.

For sale at the lowest rates by

TREADWELL & CO.,
Corner California and Battery streets, San Francisco.

N. B.—Any of the above named articles can be had at our branch store at Marysville. v7-9 tf

The Great Stump Puller.

WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.

It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.

It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.

The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.

Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumpy lands you wish to turn into house lots or gardens? Get my machine!

It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day.

WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO.

New Cultivator.

THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measures operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who wish finely cultivated soil it has no equal.

Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.

All persons are invited to call at the workshop and examine it.

R. BEECHING, Manufacturer,
v7 5 3m 35 Pine street, San Francisco.

Hydraulic Hose and Pipes.

A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. Globe Pattern Rubber Stocks, with and without Steel Rings. The whole coupling together in the most thorough workman-like manner complete for use placing in the hands of miners the most valuable gold washing apparatus ever yet introduced into the mining regions, and one which is destined to do more for the development of our mountain treasures, than all others yet introduced.

Orders per Mail or Express promptly executed.

BRYANT & CO., 68 Battery street.

P. S.—A full assortment of Rubber and Leather Belting. v7-6 2m

The Fruit Garden.

By P. BARRY,

Of the Mount Hope Nurseries, Rochester, N. Y.

A TREATISE intended to illustrate and explain the Physiology of Fruit Trees; the Theory and Practice of all operations connected with the Propagation, Transplanting, Pruning and Training of Orchard and Garden Trees, as Standards, Dwarfs, Pyramids, Espaliers, &c.; the laying out and arranging of different kinds of Orchards and Gardens; the Selection of suitable Varieties for different purposes and localities; the Gathering and Preserving Fruits; Treatment of Disease, Destruction of Insects; Description and Use of Implements, &c. Illustrated with upward of 150 Figures, representing the different parts of Trees, all Practical Operations, Forms of Trees, Designs for Plantations, Implements, &c. 1 vol., 12mo., cloth. Tenth Thousand.

HOMES FOR THE PEOPLE IN SUBURB AND COUNTRY; Or, THE VILLA, THE MANSION AND COTTAGE. Adapted to American Climate and Wants. By Gervase Wheeler. 1 vol., 12mo., with 100 Engravings. Third Edition.

"Good taste, practical common sense, and an eye to the usages of the country appear throughout the work, while its designs and illustrations will prove an invaluable assistance to those who wish to build, and to build wisely and well."—*N. Y. Evangelist.*

"The author's study has been to furnish models for convenient, tasteful and even elegant suburban and country dwellings, from the lowest to a high cost, and to afford all the necessary information for their construction. We should like to see such books wide spread, as our national architecture needs improvement."—*Philadelphia Presbyterian.*

"There are abundance of books on architecture and on landscape gardening, but an actual absence of such another volume as the present. The designs are exceedingly tasteful, and imbued with the highest spirit of architectural beauty."—*N. Y. Express.*

Copies of either of these books sent by mail (post-paid), for $2, remitted to

CHARLES SCRIBNER,

The Most Successful and the Best.

NOW COMPLETE AND FOR SALE,

SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.

By EPES SARGENT, author of "Standard Speaker," &c.

The following are nearly ready:

Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

Rural Publications.

THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages Two Dollars per annum. "Without question the BEST Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."

THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.

THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.

SPECIMEN NUMBERS

Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to

LUTHER TUCKER & SON, Albany, N. Y.

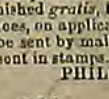
☞ A GIFT BOOK FOR ALL SEASONS. ☜

FLORA'S DICTIONARY.

BY MRS. E. W. WIRT, OF VIRGINIA.



LUCAS BROTHERS, No. 170 Market street, Baltimore, Md., call the attention the public to their new splendidly illustrated edition of Mrs. Wirt's Flora's Dictionary. It is a medium quarto, containing two hundred and thirty pages, embellished with a border, and interspersed with upwards of

Five Hundred Wood Engravings!

It is issued in the following styles of binding and illustrations:

Muslin, super extra, gilt edges and full gilt sides, with Eight Groups of Flowers colored from nature.

Morocco, extra, gilt edges and full gilt sides, with Fourteen Groups of Flowers colored from nature.

Turkey Morocco, super extra, gilt edges, with Fifty-Eight Groups colored from nature, illustrating all the flowers named in the book.

Turkey Morocco, ANTIQUE, gilt edges, with Fifty-Eight Groups colored from nature, illustrating all the flowers named in the book.

☞ The above truly superb work is for sale by WARREN & CO., State Society's Rooms, Fourth street, Sacramento; v6-21 3m And 130 Washington street, San Francisco.

MEDICINES, &c.

SANDS' SARSAPARILLA,

FOR PURIFYING THE BLOOD,

AND FOR THE CURE OF

Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the STOMACH, the CIRCULATION, and the BOWELS, and thus three processes, which are ordinarily the result of THREE different kinds of medicine, are carried on at the same time through the instrumentality of THIS ONE remedial agent. Its great merit is, that it meets and NEUTRALIZES the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.

LYNN COUNTY, Oregon Ter., March 11, 1856.

Messrs. A. B. & D. SANDS, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 24 of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were reduced, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swellings in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor, as all our neighbors will certify.

Yours, respectfully,
CALEB DAVIS.

ROMAN EYE BALSAM,

FOR INFLAMED EYE-LIDS.

The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eye-lid evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.

READ THE FOLLOWING EVIDENCE.

NEW YORK, July 15, 1856.

Messrs. A. B. & D. SANDS: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your ROMAN EYE BALSAM, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years.

Yours, &c.,
G. B. WILLIAMS, 262 BROADWAY.

PRICE, 25 CENTS PER JAR.

PUBLISHED EVERY FRIDAY MORNING, Simultaneously at Sacramento and San Francisco.

Office—on Fourth street, between J and K, Sacramento. —No. 130 Washington street (up stairs), San Francisco.

TERMS.—Five dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis.

☞ Advertisements in this journal will have a circulation and value unequaled.

☞ Advertisements and Subscriptions must be paid for in Advance.

The Geological Question.

EDITORS FARMER: I see by your paper of the 3d inst., that Doctor Winslow has promptly responded to my objections to the position which he assumed upon the original condition of our globe, in his address upon the preparation of the earth for man. I regret exceedingly that my remarks should have created any unpleasant feelings on his part, for I can assure you that nothing was further from my intention or desire. I regarded the principles which he enunciated in his address, and which were promulgated through the medium of your journal to the light of the world, as public property; to be read, and approved or condemned, as might meet the propriety of every intelligent member of the community. And as one of the humblest amongst the inquirers after truth, I sought to learn what evidences might be adduced in support of the theory which the Doctor regarded as a well established fact. I therefore presented as plainly, and distinctly, as I was enabled to do, my objections to his position, with the view, singly, to attaining that end. That ridicule is neither fact nor argument, and has no force in science and nature, I most frankly agree with the Doctor. I also regard it as a maxim, that an assumed position upon any principle in science and nature, which when brought in juxtaposition with the demonstrable laws of creation, shall excite ridicule, is equally untenable. To illustrate. If, in our attempt to support or prove the existence of a fact, or a thing, we shall seize upon false premises, and pursue a course of inductive reasoning therefrom, which leads us into an open rupture with those inevitable laws to which we appeal for support in the investigations of our subject, we have no right to complain, when the absurdity of our position is reflected from the mirrored surface of sublime truth. This is not only legitimate, it is an inevitable result. It is the touch-stone by which we are enabled to separate the pure, from the baser metal.

I am highly gratified with the flattering consideration manifested by the Doctor, in condescending to tender me the opportunity for discussing the facts, conclusions, or speculations presented in that address. And most cheerfully do I avail myself of its advantages. And to the best of my ability, will I endeavor to be governed by his injunction, viz: "to proceed in a philosophical and tranquil manner." Likewise another injunction, which I find in the conclusion of his letter, I regard as peculiarly significant and appropriate; it reads thus: "We must deal in exact words and absolute facts—that which is positively known, and conclusions which inevitably spring from such knowledge."

The Doctor manifests surprise, and seems perplexed to know how to meet the objections which presented themselves to his theory. He says in his letter: "But when the original liquid condition of this globe, on which we live, and which we can study every day, is called in question in the year 1857, I really do not know what to say, except to refer all your readers to the simplest works of geology for schools." Thus may we consult, by reference to those authors, those absolute facts, and that positive knowledge, which have already demonstrated the Doctor's theory as a well established fact. For he says in his letter: "For a critic to seize on a well established fact," &c. Had he regarded the injunctions which he has so rigidly imposed upon me in his letter, I think prudence would have dictated a little more caution than he has manifested in his favorite speculation. By a reperusal of those same works, if my memory serves me, I think he will discover that the original incandescent condition of our globe, is regarded by those authors, as supposition, conjecture, speculation, and some of them candidly acknowledge the uncertainty of the truth of any of the existing theories respecting the same. A fact signifies a known reality. A well established fact, in science, would imply, most properly, a condition which is capable of revealing its existence, and had already withstood the assaults of theorists. The motion of the earth is a well established fact in science. There are none to dispute its existence. The peculiar condition of the original earth is a subject which occupies the attention of numerous theorists, few of which are agreed, and not one is there to be found who has succeeded in establishing that cosmetic fact. A paragraph in his letter reads thus: "Who has done me so much honor, as to ridicule a fact, as clearly demonstrated, as that the earth revolves on its axis, or moves round the sun." When I compare the position assumed and the evidences which are adduced in his letter, in support of that theory, with the lofty flight of the imagination, and the fascinating charms of the soul-stirring eloquence with which he has clothed his address, I am moved to exclaim, in the language of the Doctor, "I hardly know what to say in reply!" The lively imagination of the Doctor is peculiarly manifested in the following paragraph, which I quote from his letter: "The object of your correspondent seems rather to be, to present his own views, that the globe was solid rock from the time that matter first condensed around its center, and that it has continued solid ever since." By carefully examining my letter, I think he will discover that he has fallen into a mistake. Neither expressed, nor implied, is there to be found in my communication, the gratuity which he has seen fit to ascribe to me. From the confidence and avidity with which he seizes upon theoretical deductions, and presents them as facts in support of his favorite speculation, which he so seriously regards as a well established fact, I am disposed to regard it with charity, and conclude; that in order to solve the enigma, of my speculations upon the same subject, he has located his premises upon his own theory, from which he has pursued his investigations through the channels of inductive reasoning to the point of extremity, opposite that of his own. Did it not occur to the Doctor, that other theories may have been induced, that he should so hastily conclude from my objections to the one, that I must necessarily adopt the other? My opinions in support of other theories, are foreign from the subject. The Doctor will not, most assuredly, seize upon the affirmative opinions, supporting antagonistic theories, which I have never made known, and present them in his argument, to support his own position. I am disposed to regard as another error, in the Doctor's address, the position assumed that the internal center of our globe now is in the condition of incandescent liquid heat. From the limited knowledge which we have of the laws of electricity, and magnetism, we meet with too many insuperable obstacles to a successful investigation of the subject, from the premises upon which he seeks to arrive at a satisfactory conclusion of his theory. If (as the Doctor maintains) the granitic rock has been formed through the agency of incandescent heat, how does he account for the characteristic dissimilarity of that which has been subjected to a red, or white heat, after having allowed it to cool, to that previous to heating.

The increasing ratio of the temperature indicated in the descent of various mines, and shafts in the crust of the earth, even though this fact should hold good without exception, is far from satisfactory to my mind in support of that theory. As an evidence of the unsubstantial character of not only the theory of the Doctor, but likewise of the fact of the uniform increasing temperature in the earth's crust, I quote from a letter of E. Merriam, on the subject of earthquakes, published in the National Intelligencer.

The letter says: "With regard to the heat of of the interior of the earth, I have some facts that have a bearing. The multitude of volcanos found in various parts of the earth, except within the interior of the continent of Africa, come from ever-burning fires; but there are places beneath the earth's crust, where heat is not only absent, but its opposite is present." In a paper addressed to me in 1845, by E. W. Newton, Esq., of Kanawha, Virginia, he says: "In answer to the inquiries contained in your letter, speaking of Salt Wells, several of them are from 1200 to 1610 feet deep. Mr. C. Reynolds assures us that his well is 1650 feet deep. There is abundant evidence that there is no increase of temperature in the depth reached in any of these wells. First, The water that is driven or forced up from all these wells is very cold. At one of the depth of 1500 feet, and which is tubed 700 feet, so as to include all the water, fresh or salt, to that depth—and it is quite certain that all the water comes from the depth of 1500 feet, for at that depth the stream of salt water was struck—the water is as cold as the very coldest spring water, such as gushes out from the base of our mountains. Second, The workmen at the furnaces in the warm weather are in the habit of filling jugs with river water, and immersing in the cisterns of salt water as it is thrown up. The water in the jugs soon becomes not quite so cold as ice water, but as cold as the coldest spring water. Third, The gas which comes from the lowest depths of the wells with the water, if not, according to the supposition expressed in your letter, from beneath the water, is as cold as a northern blast in winter. To be exposed to a moderate stream of this gas in tubing the wells, is extremely disagreeable to the workmen. In the hottest days in summer it chills them through in a short time. These facts everybody here considers conclusive that the temperature does not increase in proportion to the depth below the surface of the earth."

Thus do we learn that a whole community of people have been so forcibly impressed with the

inevitable results of those simple facts that they have rejected the hitherto supposed theory of the uniform increasing temperature in the crust of the earth, and consequently the theory of the present incandescent condition of the interior of our globe, thereby suffers a severe repulse.

Now I wish to call the Doctor's attention to the following problem: The existence of gravitation or attraction, being admitted, and regarded by the scientific world as an inherent and inseparable property of matter, and pervading the atoms of the material globe, it exerts its force downward, from circumference towards the centre; hence, at that point its activity ceases, from the equipoise resulting, from the resistence interposed by the opposite levers of its own force, hence follows the supposition, that matter at that point is suspended in a condition of rest, in a preparatory state of existence. In the transmutations of matter from one organization to that of another, or between a state of composition and that of decomposition, there occurs a condition of inertia, at a point where the constituent atoms of one organization recede, or in other words turns away from its fellow particles, preparatory to new and stranger organizations, illustrating the undeviating and eternal laws of creation as perfectly in the transmutation of the minutest particles of matter, as in the boundless and unfathomable combinations of the universe. Preparatory to the introduction of the destructive force of extreme repulsion, which properly belongs to the condition of incandescent heat, I shall feel greatly obliged to the Doctor if he will inform me, at what point in the universe he will first locate the fulcrum of our earth.

The startling results of the experiments of Mr. Cross, which demonstrated the fact, that by the genial influences of the electric current, when applied to inanimate matter—under certain peculiar conditions which were found to exist between the two extreme points of attraction and repulsion, brought forth to the astonished gaze of an incredulous world, perfect and distinct organizations of living and moving beings. While from a single shock from the lightning bath, which gave them form, he could have annihilated the creatures of his wonderful experiment. We witness the silent influences of this omnipotent power over the face of the whole earth, in the animal, in the vegetable, and in the mineral kingdoms, and our hearts are filled with delight at the beauty and the harmony which pervades all created things. But when the fearful thunder's annihilating bolts rend the earth, we stand aghast! amidst the scattered fragments which are falling around us. And shall we seek for peaceful and healthy action in the core of the earth, in the agency of this maddening and terrible rage? The legitimate field wherein to seek for knowledge in the works of creation, is to be found upon the vast plains which lay stretched out between the extreme points of the omnipotent forces of the universe. So long as the inquiring mind shall confine itself within these bounds, may it rejoice in the revelations of the attributes of nature. But when man shall stray away into the prison house of the one, or into the destructive whirlpool of the other, in search of those treasures, disappointment and danger shall be his reward.

And with due consideration I remain
Your most obedient servant,
E. F. BRUNDAGE.

SACRAMENTO, April 14, 1857.

Letter on Immigration.

SACRAMENTO, April 6th, 1857.

EDITORS FARMER: For several years past there have periodical spasmodic efforts been made in San Francisco, and lately by some of the same sort of men in New York, to devise ways and means to induce a larger immigration to California. From the start I have pronounced these public meetings, speeches and publications of our city gentry, humbuggery. People abroad have too much sense to be operated upon by such claptrap proceedings.

Our first object should be to manufacture *citizens* out of the *sojourners* now in the land. Let these make California their *home*, and this thousands more would at once do could they obtain a perfect and quiet title to a homestead, and have an honest administration of public affairs; and then having representatives among us fixed and permanent from every State, county, town and village in the United States, as well as from all parts of Europe—these would write back to their friends the sort of documents, accompanied with copies of the FARMER, containing so much condensed general and *practical* information, that would bring out more of just the same sort of folks as themselves, and the only sort California has any need for. But such auspicious era will not dawn upon this beautiful country, until those who *are* residents, who have an abiding interest here, shall rouse themselves to action—repudiate the whole batch of ignorant, trading, plundering politicians who have thus far usurped the government and ruled the State; together with their works, and inaugurate a different set of men and measures.

People abroad read aright about the condition of affairs here, and will not come to make a home amongst us—bringing with them their wives and children—until they learn better society is to be found, and wholesome laws to live under are in operation.

As yet but little fostering and protecting legislation has been had for the great Agricultural interest of the State. And yet the land and cattle owners, together with the large towns, have been compelled to pay nearly all the heavy and onerous taxation. This should not be, and will not be borne.

To better equalize the burdens of government and at the same time turn a large roving, floating, bird-of-passage population into permanent law-abiding citizens, *the fee simple of the mineral lands must be vested in private individual ownership*, the same as the agricultural.

Hitherto our politicians have cried out against this policy, for the reason most of them were mere temporary tarriers—with no abiding interests in the land, and consequently disposed to make and administer only such laws and regulations as would suit *visitors* like themselves.

A change, indeed, must soon take place in our governmental operations, or else emigration instead of immigration, will be the order of the day in California.

Already some of our best, most energetic, old and wealthy residents, are giving up in despair, and threatening to sell out at any sacrifice, and leave the country for another where they can live under a better rule. Two extensive merchants of this city, who have been here since 1849, built houses, brought out their families, and had determined to make it a life-time home; now tell me they have struggled and hoped for a better state of public affairs until grown heart-sick with disappointment, and shall wind up soon and go elsewhere, unless some radical reform be speedily effected.

The same with several land owners and farmers I have talked to, who very justly complain of the enormous taxes they are compelled to pay, and yet receive no equivalent protection.

Who's to blame, though, for all this maladministration? Who puts these mountebank, knavish and numskull public servants into office, but the people themselves; and yet it is for the interest of the great mass of them to have none but those, honest, capable and faithful, to attend to their affairs. They have, however, been cheated and bamboozled out of their suffrage through the cunning trickery of a few scheming leaders, and by blindly and most unwisely adhering to *party* and party *usages*—those cant stereotyped pet terms of knaves and fools—after it had become plainly apparent that the supremacy of such under corrupt leaders, would insure the violation of every cardinal principle in its creed.

Thus the unthinking masses have been led by the nose in this country for some years past, and induced to look upon a party victory of paramount importance to their country, and consequently their own interest.

A brighter day, I hope, is dawning—the "rebellious" people are about taking matters into their own hands. The rotten primary meeting and election system is on its last legs—the farcical packed-convention arrangement of political traders and tricksters on the eve of an overthrow. *Delenda est Carthago.*

CHAS. E. PICKETT.

Care of Young Fruit Trees.

WE cannot but regret the great neglect manifested in a majority of cases where young trees have been planted the present season. Wherever we go, in innumerable cases, even in well planned gardens, we see young trees planted in shallow soil and in a narrow contracted space, now left to the rays of a burning sun, without the least protection to the surface soil or the crown roots of the tree. This species of neglect is highly culpable, it is a waste of money to purchase trees and to be at the expense of planting them, and then to leave them exposed to certain death by neglect.

Trees should have ample room for the roots, both in depth and surrounding space; the soil made rich and fine, and where this has not been done, old decomposed manures should be placed on the surface (about a bushel), and spaded in finely; to this, when done, give one or two pailfulls of soapsuds. This will give a vigorous start.

In all cases where young trees have been planted, care should be taken to mulch the surface round the tree with strawy compost, wood scrapings, or other suitable substances that will retain the moisture and protect the surface soil from burning, and thus destroy the delicate roots that lie along the surface soil. Care also should be had to keep off all weeds and grasses from around the tree, for a space of three or four feet from it. Where trees are in the vicinity of the street or highway, all dust should be washed from the leaves by means of a syringe or hose; as the leaves of the tree being the lungs through which portion of the life is received, all hindrance to a free respiration is most deleterious to its growth and being. We are often called to examine trees set but recently, that show no signs of life other than remaining green—no new leaves put forth; in all such cases the pruning knife should be freely used, head the tree down, and cut without fear—portions of the branches or even the whole tree down to three or four buds above the graft. This will insure a quick and speedy start, and the tree will flourish a larger and finer head than it could attain possibly if it had remained, even should it grow. In three-fourths of the cases where trees remain without putting out leaves any length of time, unless headed down, death ensues. This being the certain result, we feel called upon to urge attention to these several points.

ARRIVAL OF BLOODED STOCK.—By the steamer Golden Age, there have arrived two Shorthorn bulls, and two Shorthorn heifers. This stock consists of Young Belvidere, a bull, calved May, 1856; Prior, a bull, calved January, 1855; Miss Nightingale, a heifer, calved July, 1855; and Hopeful, calved June, 1855. They were all raised by the Messrs. B. & C. S. Haines, of Elizabeth, New Jersey—and are said to be, without exception, the best now in the State of California. George H. Howard, Esq., is the importer. We believe this is the first arrival of blooded cattle into California, by way of the Isthmus.

Trees and Plants suitable for California.

We continue our selections from the Patent Office Report, in regard to different varieties of Trees and Plants which, we believe, would be found well adapted to our climate and soil, and we hope will be introduced into California.

THE ÆGILOPS, OR VALONIA OAK

(*Quercus Ægilops*), is indigenous to the islands of the Archipelago, and, indeed, to all Greece, and often grows to a hight of fifty or sixty feet. It is perfectly hardy in the climate of England, from which it may be inferred that it also would grow in favorable localities in our Middle and Southern States.

The cups and acorns of this tree are annually conveyed to Europe, where they are in great demand for tanning, and are believed to contain more tannin than any other vegetable in proportion to their bulk. These acorns, which are commonly called "Valonia," form a very considerable article of export of the Morea and the Levant, being worth in England from $60 to $70 a ton. The more substance there is in the husks, or cups, of these acorns the better. They are of a bright drab color, which they preserve as long as they are kept dry; but dampness injures them, as they then turn black, and become impaired, both in quality and strength.

A kind of gall is found on this tree somewhat similar to that on the *Quercus infectaria*, and which is employed for the same purposes. These galls are rugose, of an angular form, and are either the fruit itself distorted by the puncture of the insect (*Cynips quercus Calycis*), or merely the scaly cup which is enlarged into a gall.

THE DATE TREE

(*Phœnix dactylifera*) is indigenous to Syria, Arabia, and the lower parts of Persia, Egypt and Northern Africa, whence it was introduced into the South of Europe; and it is also more or less cultivated in British India, South Africa, and in some parts of America. Though belonging to the extensive family of palms, which abound and flourish in most tropical regions, it attains perfection only in comparatively high latitudes, and doubtless would be adapted to the soil and climate of the more arid regions of California and of our Southern States.

The date is a lofty tree, growing to a hight of sixty feet, with a rugged trunk, crowned with leaves six or eight feet long, with pinna three feet long, and a little more than an inch broad. The flowers of both sexes, which grow on separate trees, come out in very long bunches, from the trunk, between the leaves, and are covered with a spatha, which opens and withers. Those of the male tree have six short stamens, with narrow, four-cornered anthers, filled with pollen. The female flowers have a roundish germ, which afterwards becomes an oval berry, with a thick pulp, inclosing a hard, oblong stone. This berry is the fruit known as the date of commerce, upon which a considerable portion of the people of Egypt, Arabia and Persia almost entirely subsist. A single tree will produce from one hundred to three hundred pounds of this fruit in the season. They come into bearing at from six to ten years of age, and are fruitful for upwards of two hundred years. Being dioecious—that is, the stamens and pistils occurring in the flowers of different trees—the crops entirely fail, or the fruit is unfit for food and worthless, if the fecundation is in any way prevented. It is a fact worthy of note, however, that the male flowers will keep during the year; and yet, if shaken over the female flowers at the time of opening, impregnation will readily take effect.

The extensive importance of the date tree, in the countries where it occurs, is perhaps one of the most curious subjects to which a traveler can direct his attention. Independent of the use of the fruit as food, the inhabitants make a conserve of it with sugar, and even grind the hard stones, to feed to their camels. In Barbary, they form handsome beads of these stones. From the leaves, they make couches, baskets, bags, mats, brushes, and fly-traps; the trunk is split, and employed in erecting small buildings, also for fences to gardens; and the stems of the leaves are used for making cages for their poultry. The threads of the web-like integument at the base of the leaves are twisted into ropes, which are employed in rigging small vessels. The amylaceous central part of the trunk is also good to eat, and the buds are esteemed a delicate vegetable; and even the young shoots are said to resemble asparagus. The sap, which is sweetish when first collected, and may be drunk as a mild beverage, is distilled into a kind of spirit, known in eastern countries by the name of "arrack." It is obtained by cutting off the head of the tree, and scooping out a hollow in the top of the stem, where, in ascending, it lodges. Three or four quarts may be obtained daily from a single palm, for ten or fifteen days; after which, the quantity decreases until, at the end of six or eight weeks, the stem is exhausted, becomes dry, and is used for fuel.

THE TAMARIND TREE

(*Tamarindus indica*) is a native of Egypt and Arabia, as well as of the East Indies. In the West India Islands, where it has become naturalized, it is cultivated both for the sake of its shade and its acid, cooling, highly grateful fruit, the pulp of which is mixed and boiled with sugar, and forms an important article of commerce. It is very abundant in Jamaica, growing to a large size, and thrives well in the savannas, but most luxuriantly in the deep, rich black mold of that island. This tree was very early introduced into England, where it sometimes is known to flower; from which circumstance it may be inferred that it would prosper in favorable localities in some of our Southern States, and probably mature its fruit.

There is, perhaps, only one species of this genus; but the West India tamarind, believed to be only a variety, differs so much from the East Indian, in the form of its fruit and the number of its seeds, that it is regarded by some as specifically distinct. The pods of the West Indian variety are from two to five inches long, containing from two to four seeds; but those from the East Indies are almost twice as long, and contain from eight to twelve seeds. The seeds in both are roundish, somewhat angular, flattened, hard, polished, with a central circumscribed disc at each side, and lodged in a quantity of soft pulp. When ripe, the pods are of a dull brown color.

In Jamaica, the pods, or fruit, are gathered in June, July and August, according to their maturity. They must be fully ripe, which is known by their fragility, or easily breaking on a slight pressure between the finger and thumb. The pulp and seeds are first taken out of the pods, and cleaned from fragments of shells, placed in casks, in layers, and the boiling sirup from the sugar-house is poured in just before it begins to granulate, till the cask is filled; the sirup infuses itself into every part of the tamarinds, quite to the bottom, and when cooled, the cask is headed for sale. Sometimes a superior article is made with clarified sirup, which imparts to the fruit a more agreeable taste. The East Indian tamarind differs from that of the West Indies, not only in the size and form of the fruit, but in its relative sweetness. The former are preserved without sirup or sugar, being simply cured with salt. Those employed for domestic use are merely dried in the sun.

THE FRANKINCENSE OR OLIBANUM TREE

(*Boswellia serrata*) is indigenous to the mountains of Central India, where it is known under the name of *Sali*, and as producing the olibanum of commerce, or the gum frankincense of the ancients. It is a lofty tree, with the foliage crowded at the extremity of the branches, and is frequent in the forests between the Sone and Nangpur, from which circumstance it may be inferred that it would be adapted to the soil and climate, in favorable locations, in some of our Southern States.

Olibanum distils from incisions made in the bark of the tree during the summer months, occurring in the form of semi-transparent masses, or tears, of a pale-yellowish or pink color, solid, hard, and brittle. It has a bitterish acrid taste, and, when chewed, sticks to the teeth, and renders the saliva milky. When heated, it burns brilliantly, and diffuses an agreeable odor, in consequence of which, in the early ages, it was much used as incense in the sacrifices, and, in modern times, the Greek and Roman Catholic churches still retain the use of frankincense, in some of their ceremonies. It is seldom employed for other purposes, except as a perfume in the rooms of the sick, although other gums bearing that name are in more general use, and are by many regarded as identical with it; for instance, Lamarck designates the gum of the Amyris gileadensis by this name; Forskal and Sprengel, that of the Amyris kataf; while Linnæus erroneously thus denominates the resin of the Juniperus lycia.

THE BALSAM OF GILEAD TREE

(*Amyris gileadensis*) is a native of Arabia, and grows spontaneously in the mountains of Yemen. Although not indigenous to Judea it was cultivated with great perfection many years before Christ, in the gardens of Jericho, on the banks of the Jordan; and it is from Gilead, in that country, whence the merchants brought the resinous product to Egypt, that is derived the appellation of "Balsam of Gilead."

This shrub, or tree, which seldom exceeds fourteen feet in hight, has a trunk eight or ten inches in diameter, with many spreading, crooked, purplish branches, having protuberant buds, loaded with aromatic resin. The great value set upon this drug in the East is traced to the earliest ages. When Alexander the Great was in Judea, a spoonful of the balsam was all that could be collected on a summer's day; and, in the most plentiful year, the great royal park for these trees yielded only six gallons. It was consequently so dear that it sold for double its weight in silver. That of the best quality is said to exude naturally, but the inferior kinds of the present day are extracted by boiling the branches. It is at first turbid and white, of a strong, pungent, agreeable, aromatic odor, and of a slightly bitter, acid taste; upon being kept it becomes thin, limpid, of a greenish hue, then of a golden yellow, and at length of the consistency of honey. This balsam is highly prized among Eastern nations, particularly by the Turks and Arabs, both as a medicine and an odoriferous unguent and cosmetic. It has been highly extolled as a powerful antiseptic, vulnerary, and preventive of the plague. Its great scarcity, however, has prevented it from coming into use among European and American practitioners. It is extremely liable to adulteration, and, from its high price, and difficulty to be obtained, it is believed that not a single ounce of the genuine article can be found in this country, nor even in Europe.

THE EGYPTIAN GUM-ARABIC TREE

(*Acacia vera*), which affords the finest gum-arabic of commerce, is a native of the sandy deserts of Arabia, Egypt, and the western parts of Asia; it also grows abundantly in Barbary and other parts of Africa, particularly in the Atlas mountains. In Morocco, or Barbary, where this tree is called *Attelch*, it rises to a hight of several feet, having a crooked stem, covered with a smooth gray bark, while that of the branches is of a yellowish green, or purplish tinge. At the base of the leaves, there are two opposite awl-shaped spines, growing nearly erect, and having a slight, glandular swelling below. The wood is hard, and takes a good polish. Its seeds, which grow in a hard coriaceous pod, resemble those of the lupine, yield a reddish dye, and are used by tanners in the preparation of leather.

The gum exudes spontaneously from the bark of the trunk and branches of the tree, in a soft or nearly fluid state, and hardens by exposure to the air, or to the heat of the sun. The more sickly the tree, the more gum it yields; and the hotter the weather, the more prolific it is. A wet winter and a cool or mild summer are unfavorable to the crop. It begins to flow in December, immediately after the rainy season, near the time of the flowering of the tree. Afterwards, as the weather becomes hotter, incisions are made through the bark, to assist the exudation of the juice. The gum, when new, emits a faint smell, and when stowed in the ware-house, it may be heard to crack spontaneously for several weeks; and this cracking is the surest criterion of new gum, as it never does so when old.

Several kinds of gum, yielded by different trees, are occasionally to be met with, but that which is commonly substituted for it is brought from the Island of Senegal, on the coast of Africa, and is called "Gum Senegal."

THE MASTIC TREE

(*Pistacia lentiscus*) is a native of the south of Europe, the Levant, and the west of Asia, and probably could be cultivated with success in California, and perhaps in some parts of the South. This tree, which seldom exceeds twelve feet in hight, with a trunk ten inches in diameter, is covered with a smooth, brownish bark, and produces the resin known in commerce under the name of "mastic." It is cultivated in various parts of Continental Europe, particularly in Italy and Portugal, but no resin is said to flow from it in those climates. The culture is very simple, and is attended with but little trouble, consisting of nothing more than keeping the surface of the soil clean. It does not require any pruning, but, on the contrary, the cultivators endeavor to prevent the trunk from growing in a handsome form. The more crooked the stem, the greater the yield of resin. In the island of Chios, the officinal mastic is obtained most abundantly by making transverse incisions in the bark, from which the resin exudes in drops, and hardening on the trees, or running down and concreting on the ground, is thence collected for sale or use. The time chosen for making these incisions is about the beginning of August, when the weather is dry. In the course of the following day, the mastic begins to appear in drops, which continue to exude till the end of September. Cloths are frequently spread under the trees, so that the mastic, which falls, may not be intermixed with impurities or earth.

THE QUASSIA PLANT

(*Quassia amara*), a native of Surinam, is a beautiful shrub, or low tree, the roots, bark, and wood of which afford the true officinal quassia of commerce. This plant is sufficiently hardy to withstand the summer climate of England, where it flowers freely for several months, from which circumstance it is believed that it would succeed well in favorable localites in our Southern States.

Aside from its use as a bitter tonic, in materia medica, it is asserted that the brewers in England have, of late years, used quassia-wood instead of hops. Beer made with it, however, does not keep well, but soon becomes muddy and flat, has a mawkish taste, and runs into acteous fermentation. Consequently, it is less nutritious and wholesome than that which is properly hopped. This wood, from its narcotic power, is also used to poison flies.

THE EGYPTIAN SENNA PLANT

(*Cassia senna*) grows spontaneously in Syria, Arabia, and Upper Egypt, and is cultivated in Italy, the West Indies, and other parts of the world, for its leaves, which form a considerable article of commerce. This shrub has also been grown in England, but, as it is an annual, it becomes necessary to sow the seeds early in the spring, in a hot-bed, which adds much to the labor and expense of its cultivation.

This plant rises with a somewhat woody, erect, branching stem, to the hight of about two feet. The leaves, which form the true senna of the shops, are green, without any yellowish cast. It is stated that, at Cairo, the traders mix the leaves of other plants with those of the true senna, in the proportion of 500 parts of the *Cassia lanceolata*, which are of a bright yellowish green, 300 of *Cassia senna*, and 200 of *Cynanchum arquel*.

Okra Plant—Okra Coffee—Gumbo Soup.

At what period the Okra or Gumbaud plant was introduced into North America, I am unable to state from any books in my library. The Encyclopedia Americana has no article upon it, although it has been a common garden vegetable in the Southern and Middle States for more than fifty years.

It was first used as a substitute for Coffee, and was called Okra Coffee. And, unquestionably, it is the best substitute ever discovered. Some years ago, a writer, I think in the Prairie Farmer, pronounced it equal to the finest Mocha, and I can add that I consider myself a good judge of the genuine article, and I have at least once, without detecting it, drank the Okra with the usual gusto. In fact, as far as I can discover, the taste and odor of the two articles are identical. I should be pleased to see a comparative chemical analysis of the two berries, so dissimilar in everything except the taste and smell.

The cultivation of the Okra is very simple. The seed should be drilled like garden peas, in very slight soil, about the first of May. The plants, to be thrifty, should be at least two feet apart. When the pod is about half grown it is fit for use. It is then as tender as a young cucumber, and will not burst in the boiling. Take a dozen of these pods, which is a good mess for a family, and boil them thirty minutes in pure water (using a tin pan instead of an iron vessel), then lift them carefully with a spoon into a deep dish, and immediately season with sweet butter, rather copiously, then salt and pepper, if preferred.

To make gumbo soup, cut two or three pods into slices, as you would cucumbers, for one gallon of any kind of soup. Tomatoes in large quantities, and green corn cut from the cob, are the usual admixtures for gumbo soup. Too much Okra makes the soup insipid. There should be just enough to give it a rich mucillaginous taste.

But the Okra is principally valuable for boiling. To relish it one must use it for a season, and then it must be well cooked. Those who are accustomed to its daily use, from July to October, would not exchange it for any vegetable product whatever.

I have cultivated it in Iowa for the last ten years, and it flourishes admirably. It should be in every garden, by the side of the tomato and the egg plant—these invaluable and wholesome vegetables, introduced into the country about the same time.—[Cor. Plow, Loom and Anvil.

Seed of the Sweet Potato.

In relation to seed from the Sweet Potato, Mr. E. J. Mims, of La Pine, Edgefield District, S. C., writes to an exchange: Long ago you offered a reward for the seed of the Sweet or Carolina Potato. Doubtless it was incredulity of the existence of such seed that prompted you to offer the reward. There were a great many blooms of the Potato in the fall of 1855, and, looking carefully for seeds (in the calyx of course), I found some three or four of them. Storing them securely away in a paper and labeling, I deposited them in my portmona, and kept them there until spring; when I planted them in my garden, where there were no other papers near, and set up sentinel sticks round as a guard. After a time a little morning-glory-looking plant peeped out from the ground, and you may imagine the relief it afforded my suspense, when I beheld it taking on the well-known features and marks of the not-to-be-mistaken Yam Potato. By cutting the vines and planting them I made three or four hills of potatoes, yielding a double handful of respectable tubers.

My only apology for addressing you is, *Eureka!* I intend planting the tubers thus raised the coming season, and expect to send you a good large Yam for a potato pone. So that you may expect the grand proof of the pudding—"the chewing the bag."

Legal Tender.—The Eastern papers are publishing the following statement, derived from the law regulating the payment of debts with coin, to be the legal tender:

1. All gold coins at their respective values, for debts of any amount.

2. The half dollar, quarter dollar, dime, and half dime, at their respective values for debts of amounts under five dollars.

3. Three cent pieces for debts of amounts under thirty cents; and

4. By the law just passed, we may add, one cent pieces for debts of amounts under ten cents.

By the law of Congress, passed some four or five years ago, gold, instead of silver, was made the legal tender for large amounts. Those who, to get rid of large quantities of cents and small coin, sometimes pay bills with it, to the annoyance of the creditor, will perceive that there is a stoppage put to that antic by law.

If you would fatten your cattle profitably and well, give them plenty of good wholesome air, plenty of rest, a nice clean resting place, do not disturb the naturally quiet state of their minds, and finally, give them plenty of good nutritious food, properly prepared. If you feed grain, let it be crushed and cooked; if hay or fodder, let it be cut.

The best plan to make cattle vicious and jumping, is to have very fine feed just the other side of a very poor fence.

Horse Subjects.

Bones and Skin of Black Hawk.

Dr. Cuming, of St. John, N. B., a Veterinary Surgeon of high standing, writes a very interesting letter to the American Veterinary Journal, making suggestions in regard to the bones and skin of Black Hawk. We copy the principal portion of the letter, on which the Boston Cultivator remarks: We call particular attention to the portion in reference to the difference in the conformation of the trotter, and the racer or galloper. We have repeatedly spoken of the importance of this principle, and it is gratifying to be able to refer to so good authority as Dr. Cuming in support of the same position. We are pleased to be able to state that measures have been taken to preserve both the bones and the skin of the noble animal referred to, and we trust the work will be done in such a manner that many a useful lesson in regard to the anatomy of the horse, may be derived from these relics. Dr. Cuming says:

The death of an animal of his [Black Hawk's] stamp, is no mere personal or sectional loss, but is cause of general regret to the whole horse-fancying community through which his fame extends; every year's additional service of him being worth to the community at large, thousands, or perhaps more truly, hundreds of thousands of dollars, of prospective benefit. With me, one chief cause of regret for him is, that I have never had an opportunity of seeing him in life and action, and now never will. I would, therefore, if it could be of any service, strongly support the suggestion of Sanford Howard, Esq., that I see quoted in a paragraph in connection with the notice of Black Hawk's death, that his skin should be stuffed in such a manner as to "represent with the greatest practicable accuracy, the body it originally covered." But perhaps a better memorial than even this might be preserved of him; one at least of more practical utility to succeeding generations, and especially to members of the Veterinary Profession—I mean his skeleton.

Many years ago, Sainbel, the founder of the first Veterinary College in Britain, did much to bring both himself and his profession into repute in that country, by the publication of an "Essay on the Geometrical Proportions of the celebrated race-horse Eclipse," from which the best of our English blood-horses are still fain to count their descent. That Black Hawk will become one day equally noted and looked back to, as the type and progenitor of a breed of American trotting horses, as Eclipse has been of the English thorough-breds, I think there can be no reasonable doubts. And as, too, the geometrical proportions, and relative positions of the bones of the skeleton, that predispose to speed in trotting, are very different from those best adapted to galloping or jumping, and as the conformation suited to the one use, is at least equally worthy of scientific investigation as was the other, I think a better compliment could not be paid to the remains of Black Hawk, than what was given to his celebrated predecessor. A subject more interesting to the veterinary surgeon and equine anatomist, or more replete with instructive information for the scientific horse-breeder, could hardly, I think, be found, than a comparison of the mechanical proportions, and relative developments of the points of lineage and resistance of the trotting horse with those of the racer. And never, perhaps, will a fitter or more worthy subject be got to compare with the proportion of Eclipse, than Black Hawk. Who among the *Vets* of the Union (for I think it would almost be a disgrace upon us did any but a veterinary surgeon do it), will be the man to earn fame for himself, and do a service to his profession, by preparing the skeleton of Black Hawk, and giving us a synopsis of the anatomical deviations from the figure of the race horse, that are necessary to produce the fast, graceful, and durable trotter?

Of course, I am taking it for granted in the above suggestions that the owner of Black Hawk would not make any more objections to this use of his bones, than to the stuffing of his skin; and indeed, the one preparation can hardly be properly accomplished without the other, as without the bony framework of the animal, either to give actual support to the artificial body on which the skin is spread, or to afford a guide for the dimensions and position of parts of whatever other contrivance is used for that purpose, it will be hard to hit the points of him, so as to bring them out in their natural perfection and character. Had Black Hawk died in British territory, and within any reasonable distance of your correspondent, and had his bones been attainable for the above purpose, and no one had a prior claim on them, I should certainly have held it a professional privilege of no mean order, to have had their preparation. As I do not, under existing circumstances, consider myself entitled to any such distinction, I trust my professional brethren in the Union, who may read this through your pages, will take in good part the hint I have thrown out for them.

Mr. Ten Broeck and his American Horses.

Dear Spirit: From your last (Feb. 14), I see that your cotemporary still plays upon a "harp of a thousand strings." He will have it that Lecomte's legs are all wrong, that Prioress is stringhalted, and that the honor and credit of America is sustained alone by Prior. If your cotemporary would take the trouble to read Bell's Life in London, he would find, under the head of Brighton, in the number for January 11, that Mr. Ten Broek, who is the best judge in these matters, has nominated Lecomte and Prioress for the Champagne Stakes. Pryor has not been nominated for any stake, and as all stakes for the ensuing year closed on the first of January, Pryor will not start unless in a match. [Our correspondent is mistaken—some twenty stakes close the present month.—Ed.]

There are those who believed in the outset of this enterprise, that Mr. Ten Broeck was too shrewd a sportsman to start little Pryor for a race in England. Pryor is nothing more than a good second-rate race horse, and if he was run under age, as many believe he was, he is not even a good second-rater.

There are twenty entries for the Champagne Stakes, and among the number, and the horses of greater note, are Pretty Boy and Fisherman, four-year-olds. The Brighton Races commence on the 5th, and the Brighton Club races on the 7th of August.

I have no doubt the hot rivalry that existed so long, and terminated so unsatisfactorily to many, between Lexington and Lecomte, as champions for Turf honors, will be carried on with little abatement by the admirers of each, with their descendants. In this capacity, Lexington has decidedly the advantage in the greater number of mares he has served.

A sweepstakes for colts and fillies dropped in 1856, to come off the spring of 1859, $500 subscription, half forfeit, $100 declaration, ten or more subscribers to fill the stake, and to be run over the Metairie Course, would bring out the first foals of these illustrious sires. A Turfman.

Note by the Editor: The following is the stake referred to by our friend: "Thursday, Aug. 6. The Champagne Stakes of 5 sovereigns each, with 100 added; 3 year olds to carry 104 pounds—4, 119—5 and upwards, 124 pounds—mares and geldings allowed 3 pounds; the winner to give six dozen of champagne. One mile." The following are the entries:

Pretty Boy, 4 years; King of the Forest, 3 years; Bandalore, 4 years; Kestrel, 4 years; Glee Singer, 3 years; Tournament, 3 years; Zaidee, 3 years; New Brighton, aged; Araby's Daughter, 3 years; Mincepie, 4 years; Vengeance, 5 years; Schiedam, 3 years; John Peel, 3 years; Flacrow, 5 years; Fisherman, 4 years; Centurion, 3 years; Gemma di Vergy, 3 years; Theodora, 4 years; Lecomte, by Boston, out of Beel, aged; Prioress, by Sovereign, out of Lecomte's dam, 4 years.—[Spirit of the Times.

Bots in Horses.

Bots are the larva or maggot of a species of gad-fly, that during the months of August and September deposits its eggs on the mane, shoulders, legs, and other parts which the animal is apt to lick. These eggs are, according to some writers, immediately hatched by the heat and moisture of the mouth, and are conveyed with the food into the stomach, where they fasten themselves to the maw, or insensible coating of the stomach, by means of a couple of small hooks or claws with which they are furnished. As long as they remain here they are not an injury to the horse. On the contrary, some writers contend that they are a benefit to him, but in what way I am unable to say. When the maggots become fully grown they sometimes attack the sensible coating of the stomach, and often eat through it and destroy the life of the animal. This is owing to the disordered state of the digestive organs, for when these worms have attained a certain size, they loosen their hold upon the maw, and if the stomach is in its proper, healthy tone, they will be passed out of it, and the animal remain uninjured. It is only when they remain too long in the stomach, that they do no injury. Charcoal or wood ashes should be given to horses in moderate quantities at this season (to give a healthy tone to the stomach), especially if they are rough and shaggy in the hair, poor eaters, or any unusual stiffness observable in them, for that is a sign of the presence of bots. When these worms once attack the stomach, it is almost impossible to make them let go their hold, and in fact many persons are of opinion that it is useless to attempt to save the life of the beast when that is the case; but I am confident it can be done. I feel certain that I have saved the lives of my own horses when attacked by them, in the following manner: Take one teaspoonful of pulverized indigo, pour on a pint of water, until the indigo is pretty well dissolved, and then drench the horse with it. If the bots have already eaten through the stomach of the horse, and in that case he cannot possibly recover, it will be almost instantaneous death; but if not, they will loosen their hold, and be passed out. This cure is simple and perfectly safe; for should it prove to be something else that had ailed the horse, the indigo will not injure him. Why it is that indigo causes them to quit the stomach, I cannot tell, but hope that others will help to investigate the matter.—[T. B. L. in Tenn. Farmer.

A Wrinkle about the Age of Horses. The editor of the Southern Planter says: "The other day we met a gentleman from Alabama, who gave us a piece of information as to ascertaining the age of a horse, after it has passed the ninth year, which was quite new to us, and will be, we are sure, to most of our readers. It is this: After the horse is nine years old, a wrinkle comes on the eyelid, at the upper corner of the lower lid, and every year thereafter he has one well defined wrinkle for each year of his age over nine. If, for instance, a horse has three wrinkles, he is twelve; if four, he is thirteen. Add the number of wrinkles to nine, and you will always get at it. So says the gentleman; and he is confident it will never fail."

Keep the legs of your horses clean—dirt is productive of disease.

Domestic Department.

Tea Cakes.—Melt in milk two ounces of butter; mix with it a pound of flour; add an egg and a spoonful of yeast; make up the dough in small round cakes; flatten them a little; bake them on a buttered tin. These cakes are intended to be buttered and eaten hot.

Cream Cake.—One cup of butter, one cup of cream or sour milk, two cups of sugar, three cups of flour, four eggs, one teaspoonful of soda dissolved in vinegar, and stirred in at the last. Mix as you would pound cake, and bake in shallow tins.

Veal Chops, Larded.—These are from the best end of the neck of veal; three thick chops, with a bone to each, trimmed neatly, either larded or not; but you will braise as the former, and glaze them.

Veal Cutlets, a la Maintenon.—Half fry your cutlets; dip them in a seasoning of bread-crumbs, parsley, shallots, pepper and salt, and the yelk of an egg; inclose them in clean writing paper, and broil them.

Mince Pie without Meat.—The same preparation as for apple pies. And one hard-boiled egg chopped fine, to the pie, with raisins, and such other seasoning, as the taste may dictate for a mince pie.

Rub your griddle with fine salt before you grease it, and your cake will not stick. When walnuts are kept until the meat is too much dried to be good, let them stand in milk and water for eight hours, and dry them, and they will be as fresh as when new.

If your flatirons are rough and smoky, lay a little fine salt on a flat surface, and rub them well; it will prevent them from sticking to anything starched, and make them smooth.

To Whiten Linen turned Yellow.—Cut a pound of white soap into a gallon of milk, and hang it over a fire in a wash-kettle; when the soap has entirely melted, put in the linen, and boil it half an hour, then take it out and spread it out on the grass.

Oat straw is best for filling of beds, and it is well to change it once a year.

Miscellany.

THE ANOINTED DOVE.

"The attractive power of sweet ointments, to which Solomon here alludes, is notably declared in that which Basil relates of the manner of catching doves; which was by breeding one up tame, and then anointing her wing, then let her fly away, and the sweet odor of the ointment drew abundance of pigeons after her, which she brought to the cot of her owner."—(Patrick's Commentary on the Song of Solomon.

Midst rocks and caverns, all alone,
A white-winged dove was heard to moan;
All day, all night, forlorn she sate,
Without a friend, without a mate.

One morn a holy man passed by
With snowy beard and prayerful eye;
A censor on his arm he swings,
With which he fumes the sad bird's wings.

Charmed by the force of odors bland,
The lone one perches on his hand,
And then, with liquids heavenly sweet,
He bathes her eyes, her plumes, her feet.

All dripping thus with heavenly dew,
As up morn's roseate clouds she flew,
Of God's own garden, the perfume
Streamed on her track from every plume.

For leagues on leagues those sweets she fanned,
O'er winding stream and desert sand,
And crowded caravans, 'tis said,
With all the camels, knelt and prayed.

"Is Eden floating down, indeed?"
The Arab cried and reined his steed;
"Or hover o'er yon groves of palm
Sweet Angels, veiled in clouds of balm?"

Meanwhile, amidst those caverns rude,
All day the holy hermit stood,
Oft gazing eastward in the air
As if winged visiters were there.

Clambering at eve a lofty rock
He saw a rainbow tinted flock
Of doves fly towards the sinking sun;
All circling round th' Anointed One.

"O! Innocence!" the old man cried,
"Thou come'st back a spotless bride;
Where'er thy heaven-sweet wings are found
The sister virtues flock around."

Existence and Life.

BY REV. T. STARR KING.

The globe we inhabit is the bulb, of which life is the flower. The world is provided for the real basis of true life. Have you ever thought how the human frame represents nature in the bone, the hair, &c.? Even the components of the mighty oceans enter into the human frame. God does not publish himself by ages, but by nations, and it is, therefore, that we must consider life in its sources, and to do this we must comprehend the difference between Existence and Life, for there is a vast difference between them.

While existence is the being in the enjoyment of life, life itself consists in putting forth faculties. Take into your hand twelve seeds, and while you may be confident of their ultimate propagating of something, you cannot tell how much of life they contain. They are tiny possibilities. If one be a fragile herb and the other a majestic elm, they are vastly different in destiny and speciality, as in capaciousness. Thus it is with infants; some are the fragile herb—others the majestic elm. It depends on the number of faculties what the incipient will be. Every man is endowed as a divine corporation to trade with the riches of nature.

The relation of the body is like that of the flower-pot to the plant, that it may blossom in the final world. Is it not a satire upon our boasted civilization, that so many are generated who must exert everything for life, when nature feeds the lungs for nothing; and there is light enough for all eyes, mystery and inspiration enough for myriads of additional souls. But with all of nature's gifts the arrangement for digestion is left to man. Is it to be wondered at that Socialism springs up when food is not cheap enough that all may satiate appetite? schemes of socialism are the creations of necessity, and we may look for socialism till labor is open to all who want it.

The lecturer drew the figure of some who live only to gratify appetite, asking what they would be worth and how much different they were from the plant, as they took everything in and carried it down, whereas the plant derived its sustenance from the earth, and carries its valuables up. What would be thought of an engine—if taste could be given it—which would munch wood and swallow alcohol without producing steam? Yet we have human types of these who oscillate between restaurants and club-rooms. While this class of men accomplish nothing, others—the artists, for instance—have made fortunes out of mountain clouds or in portraits where the soul is imprisoned in oil. The great question about a man's life is, how many tendrils has he out? While one, by patient industry, observes truth out of the heavens, another does nothing at all. Isaac Newton shot out ideas that will last as long as the heavens. Lieut. Maury drags the sea, carrying with him and giving to the world its mental essence. Carlyle feeds his shaggy intellect out of the French Revolution and the English Rebellion. Dickens stretches his sympathies far-wide into society; and, were he to live long enough, would send his humor and geniality, like sun-beams, into every alley-way, nook and corner of London.

In these times—this era—where a man lives depends on where his greatest interest is, and now-a-days many, while *existing* in society, really *live* in the business world. Though could we penetrate the inner counting-room—the brain of the merchant—we might find a mind as comprehensive as that of Milton's; but his would be studying out the chances for an embroglio abroad, which, in his far-reaching sagacity, he would make inure to his pecuniary advantage. These are some of the trophies of this age. Had one hunted for Paul, the Apostle, in Athens, it is quite probable that he would have been found in a sail maker's tent; but though existing there, he was living—his mind was at work—in a higher and more noble sphere. A man may dwell in Paradise, and dream of living in a cabbage patch; and a man may dwell in a cabbage-patch and dream of living in Paradise.

In these times we often meet with those so extremely fossil that they are not only behind the age, but behind all ages. Such persons would have found their proper places had they been barnacles on the Ark. The real government of the world does not depend on the votes cast at elections, but on our moral natures; and how happy is the being who has life based on nature. It will be seen in the appointments of his dwelling. But in the equippage of a home, how rare it is to find one with taste enough who has money enough to properly expend it. It is not what is most suitable and appropriate, but is between flash and vitiated taste. The present age is characterized as fast, and in comparison with it as Methuselah was, when in his 960th year, but a youth. He had not yet seen the elephant. In this age a dandy lives from the introduction of one neck-tie to another. Woman lives from one wrinkle to another—an epoch in her lifetime. Politicians live from one Presidential election to another, and then very fast about the 4th of March; and epicures from one terrapin to another. Herschel and others of worth live after their discoveries, and will continue to live through all time.

Life to be enjoyed must be calm. In this age we exist so fast that we don't live at all. We are in such a hurry that now-a-days there is no such thing as agriculture—it is "*scratch-a-culture.*" It has been shrewdly estimated that a live Yankee gains a year of life by the momentum he attains in existing so fast. Since the days of Adam, there never was such an intensely, dangerously fast time as this; and there is much good sense in the remark of a thinking person at a Fourth of July dinner lately, that "this is the age of Electric Telegraph, the Neuralgia and Second-Hand Clothing." This fast propensity permeates everything. We read so "fast" that nothing is remembered. Much good would result if the Press and the publishing house were to stop for a year that the Bible and History might then be read.

And, continued the lecturer, the Lecture Season is a good illustration of this fast propensity. People now-a-days can't wait to read the effusions of the learned after their death, but drive them about from place to place, that all may listen to his productions and get the pure and original article,—just as they drive cows about and milk them before the doors of citizens in Cuba, where the faith of customers in the honesty of the milkmen and purity of the orator is not as strong as here.

We travel too fast, and then felicitate ourselves over the rate of speed at which we were hurled through the country. The old Pennsylvania farmer who remarked that thirty years ago you made four or five all night stops in a journey of one or two hundred miles, and picked up some information by the way; but that now you might travel to the Mississippi and back in the same time and return a fool—was about right. People now make a fast trip to the continent; spend three months in flitting over it and hurry home again, as though the beauties of Dresden, Madonna, Waterloo, the Colliseum, &c., &c., could be seen and admired in that time. As though the wonders which have accumulated with centuries could be visited, admired and inspected in an hour.

Real life is always cheap. Its majestic privileges are common ones. The substances of life are cheap for nature is supplied the poor and wealthy alike. Socrates, when asked to leave Athens, and go to rule people at a distance, said: "Why should I leave Athens, when meal is but five cents a measure, and water costs nothing?" Life is ideal, permanent, and more intellectual than physical. It is crowned by everlasting life. Every flower is the type of man.

What is Life, and How to Enjoy it.

"What is life? 'tis but a vapor,
Soon it vanishes away;
Life is like a dying taper,
O, my soul, why wish to stay?"

So saith the poet; but is it so? Many, indeed, viewing this life in comparison with another, do seem to think it is all vanity. But such is not the case. I would not wish to be understood to say, that this life is all we have to live. It is rather a preparation for another. A pilgrimage it has been called. In going through this pilgrimage, we should always keep the end in view. We are to take a straight path. We know, when we wish to make a straight track through the snow, we will be more likely to do it by keeping some object in view which lies at the end of it. So it is with life. We must, to enjoy life, have a knowledge of its Author, and let Him be uppermost in our thoughts. Enjoying life does not consist in eating, drinking and being merry. This should not constitute the life of a human being. He was made for a higher end than to be a mere animal. He has faculties to be improved. He has two natures; the one physical, the other spiritual. The one is the support of the other. The exercise of all the faculties peculiar to one of these natures, could not keep up life. If a man takes care of his body only, all his higher powers will wither. On the other hand, if he improves his mind, neglecting his body, his physical frame will soon perish.

Man's spiritual nature I conceive to be formed of the intellectual, the moral, and the emotional. To enjoy life, these must be blended together. One does not need riches to enjoy life. Neither, indeed, does he need high intellectual endowments. One greatest thing we need is a disposition to make things appear in their most favorable light. In order to do this perfectly, we must have faith, that to God's people everything must work for good. We can all be of his people, if we wish. He has revealed to us the way. A man with a very cheerful disposition, one disposed to take everything as it comes, may enjoy life. This enjoyment, however, is not to be compared to that of one who has had many afflictions, which affected him deeply, but who is soothed by the thought that they came from God, for accomplishing some design for our future good. If you wish to enjoy life to the end, you must, indeed, keep the end in view.—[J. S., in Critic (Nantucket).

Scandal.—The devil has a wonderful penchant for rebuking sin. Eyes which are full of beams have an unaccountable clearness of vision in detecting motes in other's eyes. Some people are brought into the world to accomplish a marvelous mission, and that mission is to ferret out obliquities in others. Of course it is not expected that these apostles have any business with themselves; their mission is violent, and does not admit of time to scrutinize their own position. What profit is it that they should stop to consider their own pecadilloes, when the enormities of their neighbors loom up like mountains.

So goes it the world over. Everybody minds everybody's business, but everybody neglects his own. What sort of a world would this be, if we were without each other to feed upon? Men have eyes and ears for some purpose, and what else could they find for them to do, if not to hear and see each other's failings, derelictions, errors, transgressions, enormities? They have tongues which must stand uselessly idle, if not employed in giving currency to such delinquencies. So it is with man. The obliquities of his offended brother furnish the chief staple of conversational interest. Human error is the current coin of intercourse, and too often the coin comes from the mint of the speaker's brain.—[Exchange.

A man, however hardened with guilt, still retains a soft place in his heart. Even the bloody Nero, when signing the sentence of a criminal, wished to the gods he could not write.

Medical Science.

We have received the February number of the College Journal of Medical Science, published at Cincinnati, by the Eclectic College of Medicine—a work deservedly popular, and from which we make extracts, that we hope may be of service in cases of danger and before a regular physician can be called. We are gratified to notice a very high compliment paid to the California State Medical Journal, now so ably edited by Dr. J. F. Morse, of Sacramento. We shall be happy to exchange, as requested by our Cincinnati friends, believing we can always gather many useful and valuable hints for the Home department:

Chloroform—How shall we insure its safety in its Administration?—Dr. Black, of St. Bartholemew's Hospital, has just published a pamphlet investigating the causes of death from chloroform, in which he draws the conclusion: "Our attention must be wholly given to the *breathing*, from the observation of which we must not allow ourselves to be diverted for a moment. If the patient breathes easily, he is in safety; if his breathing be attended by frequent coughing, and still more, if it appear to be restrained, with deepening turgescence of the head and face, we have before us the distinct warnings of danger; and unless we give immediate heed to them, they will be speedily realized."

Mr. Syme has published a Clinical Lecture in the Lancet, in which he advances similar views. On the respiration becoming difficult, he directs that the mouth should be opened, and the tip of the tongue seized with the artery forceps, and well drawn forward, so as to allow the greatest possible freedom in the respirations.

Progress in Medical Science.—In an Introductory Lecture, at Edinburgh University, Prof. John Hugh Bennet said: "Everything promises that before long, a law of true harmony will be foamed out of the discordant materials which surround us; and if *we*, your predecessors, have failed, to *you*, I trust, will belong the honor of building up *a system of medicine* which, for its consistency, simplicity, and truth, may, at the same time, *attract the confidence of the public*, and command the respect of the scientific world."

Oil of Male Fern—Tænia.—In Guy Hospital Reports, Dr. W. W. Gall has published a paper containing notes of *fifty* cases of tape worm treated by the use of the oil of the *Lastrea Felix Mas*. In about the year 1830, Peschier, of Geneva, proved the value of this plant as an Anthelmentic in several hundred cases. In 1852, Dr. Christison, of Edinburgh, published a paper on its use. In 1823, Dr. Christison gave the results of his experience with this agent in tape worm in twenty cases, in all of which, with no exception, it led to a discharge of the worm after a single dose.

The experience of Dr. Gall fully confirms the experience of Dr. Christison. In each of the fifty cases, in his own practice, as well as in others under the care of his friends, the remedy proved effectual. The preparation used by Dr. Hall was the *Etherial Tincture of the rhizome*, in doses of from one and a half to two fluid drachms, in a mucilaginous draught. The average time after the administration of the medicine, and the expulsion of the worm, was five and three-fifths hours.

Starch as an External Application in Cases of Smallpox and other Skin Diseases of an Inflammatory Nature.—Dr. Thos. W. Belcher extols (Dublin Hospital Gazette) the efficiency of starch, used externally, in skin diseases generally, and more particularly in small pox. He relates several cases of small pox in which he used the starch. This article is made thick, and frequently applied. The entire surface of the body was sponged with tepid water at least once daily, after which the mucilage of starch was immediately laid on. It allays the itching, and completely prevented pitting.

Extract from a Recent Speech by John B. Gough.

Or those who began this work some are living to-day, and I should like to stand now and see the mighty enterprise as it rises before them. They lifted the first turf—prepared the bed in which lies the corner stone. They laid it amid persecution and storm. They worked under the surface; and men almost forgot that there were busy hands laying the solid foundation far down beneath. By and by they get the foundation above the surface and then commenced another storm of persecution. Now we see the superstructure, pillars, tower after tower, column after column, with the capitol, emblazoned, "Love, truth, sympathy, and good will to all men." Old men gaze upon it as it grows up before them. They will not live to see it completed, but they see in faith the crowning cap stone set upon it. Meek eyed women weep as it grows in beauty; children strew the pathway of the workmen with flowers. We do not see its beauty yet—we do not see the magnificence of the superstructure yet—because it is in the course of erection. Scaffolding, ropes, ladders, workmen ascending, mar the beauty of the building, but by and by when they who have labored shall come up over thousands of battle fields sown with bright grain never again to be crushed in the distillery—through vineyards where trellised vines with grapes hanging in all their purple glory, never again to be pressed into that which can debase or degrade mankind; when they shall come through orchards, under trees hanging thick with golden, pulpy fruit, never to be turned into that which can injure or debase—when they shall come up to the last distillery and destroy it, to the last stream of liquid death and dry it up, to the last little child, and lift him up to stand where God intended that mankind should stand, to the last drunkard and nerve him to break the burning fetters, and make a glorious accompaniment to the song of freedom by the clanking of the broken chains—then, ah! then will the cap stone be set upon it, the scaffolding will fall with a crash, and the building will stand in its wondrous beauty before an astonished world.

Destruction of Counterfeit Coin at the United States Marshal's Office.—*Washington, March 5.*—Yesterday, in accordance with an established usage prevailing on inauguration day, all the counterfeit coin taken by the United States Deputy Marshal during the four years past, was gathered together and committed to the flames. The place of the bon-fire yesterday, was the Marshal's Office, in College place, and the amount was $1300, comprising counterfeit gold and silver coin. A large quantity of dies, molds, chemicals and other counterfeit materials, were converted into smoke and ashes at the same time. This quadrennial destruction of bogus coin is about double the amount gathered during President Fillmore's administration.

SEEDS, &c.

SEED WAREHOUSE,
110 CALIFORNIA STREET.

THE undersigned, Importer and Dealer in FIELD, GARDEN AND FLOWER SEEDS, is constantly receiving by every Steamer and Clipper from the States, fresh supplies of all kinds of

Field Seeds, Garden Seeds, Flower Seeds,

Green House Plants, &c.

Catalogues will be ready for delivery by the first of October. Consignments of Trees and Agricultural Implements attended to.

J. R. RAY,
v6-9 20 J street, Sacramento.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (Sorghum Sucre).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by

J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

CHINESE SUGAR CANE,
OR,
SORGHO SUCRE.
PURE SEED.

THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 30 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,

W. P. ORME, Atlanta, Georgia.
Atlanta, November 7, 1856. v6-22

SEEDS.
HOVEY & CO.,

For sale at the Rooms of the State Ag. Society,
v6-19 tf Fourth street, Sacramento.

Seed of the Great Tree.

A FEW packets of the Seed of this famous Tree are for sale at the State Society's Rooms, on Fourth street, Office of the California Farmer. v5-13

HORTICULTURAL.

Commercial Nursery,
Three-Quarters of a Mile East of the City of San Jose.

THE Proprietors of this Nursery, having received the award of the

FIRST PREMIUM
OF THE
STATE SOCIETY

the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of

FRUIT AND ORNAMENTAL TREES,
For the Trade of 1856 *and* 1857,

that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.

Our Stock consists of

One Hundred Thousand Trees,

FROM FOUR TO ELEVEN FEET IN HIGHT.

Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;
TOGETHER WITH
Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.

Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.

Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.

Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.

Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.

☞ Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.

All communications addressed to the subscribers will receive prompt attention.

v7-1 3m SMITH & WINCHELL.

Smith's Pomological Gardens
AND
NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast. Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Allanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—1,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

* Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.

v6-19 3m A. P. S.

San Jose Nursery.

THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of

FRUIT AND ORNAMENTAL TREES,
ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.

Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 69 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.

The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.

In each of he above the very best and most approved varieties.

The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—

Black and Honey Locust;
Chinese Allanthus, Catalpas.

—Also,—

25,000 Mulberry Trees,

All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.

ROSES! ROSES!! ROSES!!!

In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 96 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.

The Proprietor will send his Catalogue, gratis, o every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.

Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.

Address letters to L. PREVOST,

PACIFIC MUSEUM,
Corner of Clay and Kearny streets.
INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!

THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Worf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.

Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montes.

☞ A full Brass Band is in attendance every evening Open every day and evening (Sundays excepted).

** Admission 25 cents during the Day, and 50 cents in the Evening. v7-2

The California Farmer.

SAN FRANCISCO, FRIDAY, APRIL 17, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Halls on Fourth street, between J and K, City of Sacramento, where all are invited free.

CALIFORNIA PAPER—ANOTHER ADVANCE. It gives us much pleasure to announce that the FARMER is this week printed entirely on California-made paper, from the New Mill of Messrs. Taylor & Post, at Bolinas. So we have at length what has long been needed, a paper mill in full operation in this State, and it is another advance in prosperity, as it will save to our own citizens a large amount of money which has formerly been sent out of the country for printing paper. We are gratified to state that the appearance of the FARMER will be much improved in future, as we have made arrangements for a regular supply of this Home Production, and intend to use it exclusively. We shall refer to this subject again.

To our Readers and Correspondents.

WE must ask kind indulgence from our friends for delays or seeming neglects of their favors or letters. We have been away from our editorial room for some two weeks, at work among the hills and valleys bordering on the Sacramento, Yuba and Feather rivers, of which we shall give due account. Our trip up the Sacramento to Marysville and vicinity, thence to the famed Oroville, the mines, Bidwell's and adjacent places, will be duly chronicled, and what we have seen and enjoyed duly noted. We can never forget the many kind courtesies received. For any omissions of correspondents we will make ample amends on our return.

While at Oroville we were much and often facilitated by the prompt attention and early delivery of our letters by the gentlemanly agents of Wells, Fargo & Co.'s Express. To Mr. French we are very grateful for many courtesies; and we believe W. F. & Co. could have no better person to look after their interests. Messrs. McWilliams & Tymeson, bankers, through whom the banking and exchange business connected with that house is done, are men of reliability and enterprise, and are doing a very excellent business. Mr. C. H. Hedges, Esq., so long and favorably known as in charge of W. F. & Co.'s business at Marysville, is now engaged in the business of banking, and the amount of business done by that house is a guarantee of the high estimation in which he is held.

We shall duly record the many favors received, especially from the proprietor of the stage house, the St. Nicholas, where "Frank Johnson" presides. All who remember the steamer Gov. Dana will remember Frank Johnson, and all who visit Oroville must know him.

Oroville is one of the most lively towns in the State, and the immensely rich mineral and agricultural lands in her immediate vicinity will soon make Oroville the third city of California.

The Sugar Beet.

WE have many inquiries daily made of us relative to this important article. Cultivators desire to know the kind of soil best adapted to its growth, the best time of planting, the probable quantity produced upon an acre, and the price that it may be expected to bring. At the present stage of the business of sugar making from the beet there are many considerations worthy the especial thought of those who desire to go into the cultivation of the article. It has always been the habit of certain classes to *jump into any business* that is new, exciting, or that seems to promise good returns; without any regard to their own capacities or knowledge of the subject; and the result has generally been that every kind of business has been overdone or injured by those whose ignorance and folly, united to a desire to be rich, has blighted enterprises that otherwise would have proved successful. This has been the case with many who have dabbled with agricultural pursuits to their own ruin. They had neither a knowledge of it, a taste for it, or a love in its pursuit—and these are the prerequisites of success. The mere desire to skin the earth, and to filch from it its wealth, for selfish ends, will always be defeated,

> For Nature acts in self defence,
> And she most surely knows
> Those friends who love and worship her,
> As well as selfish foes.

From '51 to the present time every species of product and every variety that promised to *pay well* soon found parties ready to dive into them. They seemed to "go it blind," and the result was—they were defeated; the cool, considerate player *won the game;* but the new hand was "flat broke." All who can remember ten thousand cases of the kind can look back and see *great fortunes*, like great castles built in the air, vanish away like our day dreams. We feel called upon to speak thus of these matters, as, for five years, we have been close observers; and we have seen the merchant leave a prosperous business, to turn farmer—though he never handled a plow, nor could he tell one kind from another, or know how to use one. We have seen the Minister of Christ leave his flock and his calling, and turn to money making by farming; and the Doctor leave the patient who needed his care and attention; and the Lawyer and Judge, and a host of others; men who had a profitable business, or a legitimate profession that was successful: we have seen these turn away, and engage in a business of which they were ignorant, much to the injury of those who were rightly engaged in it, and thus overdo and overthrow the prospect of all; not only ruining themselves, but others. And now, when we see our State developing in her vast resources, as we see new products springing into notice and demand, we feel that the time has come to warn all to stick to their own business, unless they have a *surplus* of cash they know not how to spend, and conclude to throw it away in raising Chinese Sugar Cane, Sugar Beet, Hemp, Flax, Cotton, Rice, Tea, &c.

But to the sugar beet again. That sugar can be made from the beet, and successfully made, we have not the least doubt, and that the beet crop is a very profitable one to raise, we have no doubt; but every one to his business. A man to be successful with root crops should know the nature and character of the soil they require, the manner of cultivation, &c. He should make it his especial study. Then he will excel in his business. And so with the grower of sugar cane, of grain of any kind, of the vine or any other product of the earth; and especially is it necessary in California, where the soil, the climate and the manner of cultivation are so different from any other part of the world. Knowledge is essential to success, in every profession, and it is lamentable that, in the business of Agriculture, so great a truth is so often forgotten, and so many think that those who have not brains enough to make a merchant, minister, doctor or lawyer, *will do for farmers*, when, the truth is, the farmer should possess a knowledge equal to all the professions joined.

For the successful raising of the sugar beet a deep and rich, but light, porous soil is required. The earth should be subsoiled to the depth of twenty to twenty-four inches, and the land again plowed and cross plowed, and made as fine as is possible. The pure white sugar beet, of French origin—or real French—should only be used. The rows should be 3½ feet apart, and the seed sown carefully, so as to have the plants in single rows. These should be carefully cultivated through the season; weeds never should be allowed where a crop grows. The sugar beet can be planted, even as late as June, upon soil prepared as we have directed, and, if properly attended, the yield will be forty, fifty and even sixty tons per acre; and should there not be a great demand for sugar making, there is no crop that will pay better. It has always found a market for feeding stock at five, eight and even ten dollars per ton. While we believe large quantities will find a ready sale, at remunerative prices, the coming autumn, we would not advise men to leave their regular occupations, and go to raising sugar beet; neither would we have them engage in any other of the new crops, or even spread out in a business that they were not designed for by Nature or Providence. And while we say this, we, by all means, desire to be understood that we would have every merchant, minister, lawyer and doctor, and every mechanic, have his own homestead roof, his own garden, and raise those necessaries and luxuries that tend to make that home more beautiful and happy than it would be without these blessings. Yes, let every citizen cultivate around his home; make it a paradise, even; fill his home with beautiful flowers, and load his own table with luscious fruits; but leave the great original occupation of tilling the soil to those who, by education, circumstance and occupation, are better adapted to it. Let the cultivation of the earth be pursued as a legitimate business—not as a mere speculation—and let all other employments aim at the same end, each assisting the other, and we should see more united happy homes, more universal prosperity, and a permanent success to all industry and labor, as the result of well directed effort.

Hindrances to California Industry.

Go through the great business thoroughfares of San Francisco, Sacramento, Marysville, Stockton, or elsewhere, and you hear continual complaints of the dullness of trade among the mercantile classes. Go to those nurseries of California industry now springing up over our land, our manufactories and our workshops, and the same complaints strike your ear. The laborer is not appreciated, and *home manufactures* are not regarded as they should be. A merchant looks to the New York prices current, compares it with the San Francisco market, and sends his orders and exchange to the East, and gluts the market here, and wonders business is so dull; but he rarely dreams that his *own acts* are the moving cause of the present embarrassment of trade and business.

When our own manufactures shall have the precedence, when no goods shall be imported here that can be made here as good and as cheap, even, we shall see a healthy tone to business, and not till then; we might pile up facts upon facts in support of this position, but so long as men will be blind to their own interests, experience, bitter experience only can teach them.

We would now call the attention of our readers to the sale of a cargo of *imported goods*, and ask merchants, traders and farmers, we ask all men, to read over this list, and ask themselves if there is a single article here enumerated that we cannot produce, better and cheaper—unless we except pine apples and oysters—and yet here are nearly *fifteen thousand cases or kegs* of produce, averaging one dozen each, or nearly *two hundred thousand jars and bottles* of such products as can be easily produced upon our own soil, and for which over *one hundred thousand dollars* will be drained from our State to pay for them, their freight and other costs attending their importations; and this but the list of *one* importer—the sale of Messrs. Wendel & Espy's preserves, sold by their principal house here within a month past. When we say this is but *one fact* to show the hindrances to California prosperity, we ask all men to read over the articles enumerated, and the amounts, and then remember that we have other large importers of the same kind of goods, that are continually flooding our markets; can we wonder at the depression of trade? Read the history of the rise and progress of any State or Nation, where *home industry* has been fostered and cherished and where it has not, and draw the contrast, and we shall see California belongs to the latter class. The only wonder is that she has not been blotted out of being, by this disregard of her true interests by those in power and authority. We might enlarge upon this topic, but we call upon all those manufacturers of such products as are here mentioned, to review this list, and ask themselves what encouragement *they* have to battle against such wholesale competitors?

Where are Turner Brothers, with their splendid warehouses and excellent home products? Where is Baker, with his pickles and tomatoes? and where many others, who have labored and expended liberally to build up California? Behold your competitors, and if these are not enough to discourage and break you down, go to our Bonded Warehouses, and see the same articles of *foreign* manufactures—and thus your enterprises are checked. While we advocate free trade, we can see that unless Californians awake to their true interests, and throw such shields around our own industry as we can, and give them preference, we cannot hope for better days.

We here annex the sale which closed this invoice, to which we call especial attention. It is a fact that from the paper of the same day reporting this sale, we see reported the shipment of treasure of April 5th, $1,135,400 12—*near two millions of dollars*—and probably "orders" for another cargo of the like goods, to *help* our own producers:

128 cases half gallon Gherkins, Wendell's, $3 35 @ $3 42½.
1234 do Pie Fruits, Wendell's, $4 25 @ $4 27½.
404 do Fresh Apples, 3 pts, glass, Wendell's, $4 62½.
107 do Fresh Tomatoes, qts, glass, Wendell's, $1 92 1-2.
119 do Brandy Cherries, qts, glass, Wendell's, $1 62 1-2.
370 do Fresh Pine Apples, 3 pts, glass, do, $6 @ $6 25.
492 do do do do, 2-lb cans, do, $4 @ $4 12 1-2.
249 do gallon Brandy Peaches, Wendell's, $5 05@$5 37 1-2.
1122 do half gall Brandy Peaches, Wendell's, $4 22 ½ @ $4 50.
75 do quarts, Gherkins, Wendell's, $2 12 1-2.
89 do Fresh Whortleberries, 2-lb cans, Wendell's, $3 50.
33 do do Strawberries, qts, glass, Wendell's, $3 85.
106 do do do, 2-lb cans, Wendell's, $4.
36 do do Tomatoes, 1-lb cans, Wendell's, $1 25.
75 do do do, 3 pts, glass, Espy's, $2 75.
178 do Pepper Sauce, gothic, pts, Espy's, $1.
139 do do do, 2 doz each, Espy's, 95c.
50 do Fresh Tomatoes, 2-lb cans, Espy's, $2 05.
70 do Green Corn, 2-lb cans, Espy's, $3 87 1-2 @ $4.
29 do Fresh Tomatoes, 3-lb cans, Espy's, $3 12 1-2.
10 do Fresh Beans, 2-lb cans, Espy's, $2 75.
163 do Tomato Ketchup, qts, glass, Espy's, $2.
66 do do do, pts, glass, Espy's, $1 50.
66 do do do, 2 doz each, Espy's, $1 37 1-2.
15 do Fresh Plums, 2-lb cans, Espy's, $4 50.
444 do quarts, Gherkins, Espy's, $2 05.
844 kegs 10-gallon each, Pickles, Wendell's, $2 27 1-2 @ $3.
175 cases 2 dozen each, Reeves & Brennan's Baltimore Cove Oysters, $6 65 @ $6 70.
1372 dozen Honey, "as is," 2-lb cans, $1 62 1-2.

Gardens around Sacramento.

WE often speak of the Gardens of this famous city and those in the vicinity, and recently we had some pleasant walks and rides to visit them, that afforded us much pleasure.

A few hours' leisure gave us a chance to visit the Yolo side, from Sacramento, and see the improvements opposite the Levee City. We found the center of the place, as the county seat, some improved; but aside from that, few of the adjoining lots or gardens were at all improved. We visited the nursery grounds of Mr. C. W. Reed, where we found the results of well-directed industry and of practical knowledge. Mr. Reed has some 150,000 trees that will be ready for sale this fall. He cultivates without irrigation, by subsoiling and by constant cultivation. We could not but notice the perfect neatness and cleanliness from weeds that marked a nursery well kept. Such examples of good cultivation are worthy of all praise. There are several excellent farms upon the Yolo side, under good care. Those of Dr. J. S. Curtis, the President of the County Society, and several others, all illustrate good care and attention. It will be recollected that Dr. Curtis has within a year or two grown splendid Peanuts, Millet, Sweet Potatoes, and other new products. After a day in general reviews, we were kindly offered escort to visit many farms and ranches upon the Stockton road, and passed a day there, visiting some of those most prominent. The fine Milk Ranch of Mr. Chas. S. Mack, the places of S. A. Pennach, Chas. Griffith, Caleb Gosling, C. D. Childs, Dr. Cooper, Mr. Sawyer, and several others, all indicate a better interest in farming.

Another day, passed on the banks of the American river, revealed to us the richness of her soil. We visited the vegetable gardens of Mr. Donn, Mr. Coggshall, and the garden of J. W. Wells, Esq., one of the teachers of our public schools, and we learned that his home has all sprung into being in a few months, and what is better, the whole grounds have been designed, planted, and cared for by himself, using the early hours and the moonlight, to labor and improve a home. Mr. Wm. O'Brien, Gardener, has a neat garden, about one mile from Sacramento, where much labor and taste have been bestowed to improve. Mr. O'Brien is an excellent workman in designing gardens and finds full employment in that kind of business.

From Sacramento to the Ten-mile House, all along the old road through Brighton, out to the old "Leidesdorf Estate," farms, ranches, gardens, &c. are but little improved, owing to the almost unending litigation about titles—that great drawback to the improvement of our State. The present year will show the sad effects of this terrible evil, for many persons will give up in despair of ever settling, and quit homes that otherwise would be made pleasant and happy. The entire route indicated very rich and fertile land, but the late very warm weather gave evidence of a want of moisture, the earth appearing very dry, and we regretted to notice this, from the very fact that it arose from poor or light cultivation, much of the land having been plowed only six or eight inches deep. Wherever we noticed better care, in deep or subsoil plowing, there the crops looked finely, and the warm weather had no bad effects. We had hoped that past experience would have called a better attention to the subsoiling system. In the matter of cultivation however, *we learned this one prevailing resolution*: on all those lands where there were doubts of title, *all improvements ceased*—poor houses, poor fences, poor cultivation and consequently poor crops. The skinning process was going on, as it might be the last year they would remain. We know nothing can be more fatal to the interests of all than this condition of suspense. Owners, or those that claim estates, and every good citizen should do all in their power to remove these difficulties in the way of improvement, for it is for the interest of all to do so. In a circuit of fifty miles round Sacramento, the same hindrances keep back improvements that would otherwise largely increase the business of Sacramento and replenish the treasury of the county. Unless there should be more interest manifested to improve the county roads, build bridges, remove doubts of titles, and induce permanency, the county must remain stationary in these interests, while others will be rapidly advancing. It is to be hoped these matters will be regarded with a greater interest.

We returned to Smith's Pomological Gardens, after two days' ride, as the best and most lovely spot we could find to enjoy ourselves after hard labor. Here we would be content to stay till peach-time if our readers would consent to give us a holiday till that time; and as the luscious strawberry is now showing the crimson cheek among its leaves, we could live very comfortably on them *till the peaches were ripe*.

Smith Gardens at Sacramento

Will be the great resort of lovers of the beautiful in Flora and Pomona the present season. We most earnestly hope all who desire to have confirmation "strong as holy writ," of the ability of our climate and soil to produce fruit in luxurious abundance and to witness beautiful grounds in the highest state of cultivation, will go to these gardens at any time from the present moment; a single visit to these delightful grounds will not only awaken a love of beautifying homes, but will convey lessons of instruction while it affords pleasure of the highest kind.

Mr. Smith, the proprietor of these extensive grounds, deserves well of the public for the vast outlay he has made to offer so splendid a place of resort. To those who have never visited these grounds, we would simply state that they cover an extent of fifty acres of orchard and garden, and are in the very highest state of cultivation, the walks and arbors affording pleasant promenades and resting-places. The conservatories of which there are several, are full of the choicest gems; the strawberry grounds are promising of their abundance, and soon those who love this luscious fruit can be liberally supplied.

We are pleased to note the extensive preparation of Mr. Smith to receive his visitors the present season. His new and pretty cottage will afford a pleasant suit of reception rooms, and the promise of abundant crops must be gratifying to one who has expended so large a fortune in the cause of Horticulture. Were we to estimate the crop of fruit at this garden we should name the *Strawberries* at *tons*, and the *Peaches* at *ten thousand baskets* the coming year. With such a prospect in view, we can only say to our readers: fail not to visit these grounds if you wish real enjoyment! We shall not forget the pleasure we enjoyed or the courtesies we received, the former enhanced by the sincerity of the latter. To Mr. Smith and his brother we were under great obligations for their kindness in furnishing us with carriage and accompanying us in our trips just mentioned; and for that exquisite bouquet from our friend Saul, we can only say, if he had seen the pleasure it afforded to those that *can appreciate* the beautiful, he would have felt amply rewarded.

Sacramento County.

No county in our State has had more difficulties to contend with than this county, and none has more successfully triumphed over them. No county has greater opportunities for rapid advances in all that beautifies and adorns, none possesses a better climate, none enjoys greater health. Nature has been lavish of her favors; fortune has smiled, and she has frowned; but her smiles have been more frequent than her frowns, and the Levee City, her pet capital, is now one of the most prosperous cities of the State.

Sacramento has stemmed the tide that set against her so long, with a giant power, and the wonder is that she could thus triumph over difficulties and misfortunes that were enough to crush any but men of giant energies. Sacramento holds a position that commands great sources of trade, and yet Sacramento has done little or nothing to retain the trade that seemed to flow into her naturally, and the wonder is that she has thus retained it.

As an old Sacramentan, we should rejoice in her prosperity and greatness; but we cannot but see how much she has omitted to do to secure to herself the trade she at present enjoys, or to open new sources of trade, and to secure them to herself. We speak advisedly when we say that of all the great machinery at work by other cities to secure the trade of the surrounding country, Sacramento has never expended a dollar for bridges, county roads, public squares, or in any way expended means to secure to her own citizens an increase of trade, or the trade she at present enjoys; but it has all been owing to a peculiar good fortune attending her, and to the private enterprises of extraordinary men, that she has attained her present prosperity and high standing. But "the race is not to the swift," "nor the battle to the strong," and Sacramento may yet lose her position; she may retrograde and fall into the rear, if misfortune again strike her, or if rival cities diverge the trade now enjoyed by her.

Sacramento must awake to her duties: her county roads are in bad repair; there are sloughs and creeks that should be bridged, new roads that should be opened, old ones improved, and many other public enterprises that should demand the attention of those in authority, if they would secure to the citizens the business they at present enjoy, or increase it to that amount which is in their power to do by a proper public spirit.

We have felt called upon to say this much from facts gathered by our intercourse with our citizens in various parts of the county, who feel that the burden has fallen on them, which should have been more widely diffused. Sacramento city and streets may be equal to other cities, but her county roads are not what they should be; and we hope some plan will be devised to make them what they should be. We passed over them of late, on both the Stockton routes and the American river side, some fifteen or twenty miles, and we felt it a reproach to a city of such standing, for all know if her resources were managed as they ought to be, her public thoroughfares would be in better condition.

We shall refer to this subject again.

Extraordinary Surgical Operation.

A SURGICAL operation of such rare delicacy, coolness and skill, as the one we are about to record, and which has probably not been surpassed in the annals of surgery, was performed in this city, on Saturday last, the 11th inst. The facts of the case are as follows: About two months and a half ago, a Mr. Beal of Tuolumne county, had the breech pin of a fowling piece blown into his body, while endeavoring to discharge the gun, which was rusty and overloaded. The breech pin entered under the left arm, breaking a rib in its progress, and finally rested in the cavity of the chest beneath the heart, where it remained during the time mentioned, producing effusion and purulent secretion, until the cavity of the chest was perfectly engorged. He had been treated for the wound, but with little or no relief, as the piece of metal still remained in his body, although it had been vainly searched for.

In an almost dying state; his frame attenuated and weakened, Mr. Beal was brought to this city for treatment; but with scarcely a hope for recovery. But being of a most determined character, he readily consented to suffer an operation, although informed that it would probably cause his death before the operation could be completed.

Accordingly, his surgical attendant commenced by making an incision through the fleshy parts under the left arm, down the ribs, midway between the spine and the breast bone, for the distance of four inches and a half. A transverse incision was then made, three inches long, commencing near the centre of the former, and directed towards the breast bone. Portions of the entire sixth and seventh true ribs were removed with the saw, and subsequently, part of the first false rib, when it was expected the metallic substance in the cavity of the chest could be readily discovered. This hope, however, proved delusive, as the probe was tried in vain, to its full length, about five inches. The external wound was then enlarged so as to admit the fingers, in the hope of ascertaining by the sense of touch, some sinus or opening, leading to the metallic body, through which an instrument could be passed to ascertain its location. The most patient and careful exploration failed to reveal anything, although the fingers were repeatedly passed about the heart in every direction.

As a *dernier resort*, a steel sound, nearly fourteen inches in length, was introduced to the depth of about eleven inches, and the cavity of the chest cautiously, but thoroughly explored, until the locality of the metal was ascertained beneath the heart. It was most difficult to determine whether the foreign substance was really found, as the action of the heart constantly imparted motion to the instrument, which necessarily embarrassed the delicate exercise of the sense of touch, and the metal was so enveloped in the deposit of matter, or so covered up by the membranes, that the sensation conveyed through the sound was more like that made when coming in contact with the bones than of a foreign and metallic body, and required the exercise of a remarkable degree of coolness, patience and courage.

The breech pin was finally seized and extracted, and the patient is now doing well, far beyond what could possibly have been expected under the circumstances, and is most likely to recover.

This magnificent operation, which occupied one hour and a quarter in its performance, was the work of Doctor E. S. Cooper, assisted by Doctors A. B. Sheldon, Webster and others.

It is most worthy of remark, that Mr. Beal suffered the whole of this wonderful, dangerous and trying operation without the use of chloroform or ether; but firmly setting his teeth, endured the insufferable agony for the space of one hour and a quarter. Sometimes he would say, "Doctor, I can stand this no longer," when a small quantity of brandy was administered to keep him up; but otherwise he never gave a groan, that could be heard across the room in which he laid. We certainly consider this the most wonderful surgical operation ever performed in this country, and challenge a parallel elsewhere. We have taken much pains to give this account at length, for the advancement of the surgical art.

CALIFORNIA WINES.—The gradual advance in the quality and character of our California wines must be a source of gratification to all who are looking forward to the true independence of California, to the time when she will not only control the trade of her breadstuffs at home, but become exporter, also, and with her breadstuffs, her wines. The wines of California are attracting much attention in various cities and States in the East, where samples have been sent; and even in Europe they are exciting much feeling. The several manufacturers of wines in California are making exertions to improve in all their departments of manufacture the present year, and we may expect superior wines at the Annual Exhibition. We believe no wines made in California excel those of Messrs. Kohler & Co., whose office is now in Montgomery block. We have received samples of their best vintage—their White wines, and their Angelica and Claret, and we are confident they will hold fair comparison with much of the best imported wines that are forced upon our market, to the manifest injury of our home manufacture. Messrs. Kohler & Co.'s wines are worthy being known far and wide.

SPECIAL NOTICES.

☞ **OXYGENATED BITTERS.**—*The annexed statement of Prof. A. A. Hayes, M. D., State Assayer, is ample testimony of the scientific manner in which this medicine is compounded, and recommends it to the Professional Man.*

An opinion having been asked for of me, in consequence of the formula for preparing Oxygenated Bitters being known to me, I express to the following form:

The composition of these Bitters includes those medicinal substances which experienced physicians have long resorted to for special action on the system, when deranged by Fevers, Dyspepsia, Agues and General Debility, resulting from exposure or climate influence.

These are rendered permanent, and remain active in this preparation *as a consequence of the scientific manner in which they are combined.*

It is a well founded inference, that the preparation, used in larger or smaller doses, would prove a valuable *General Medicine*, which experience has demonstrated.

In this medicine, no metallic salts can be found, by the most delicate chemical trials.

Respectfully, A. A. HAYES, M. D.,
Assayer to the State of Mass.

No. 1 Flax street, Boston, 16th Dec., 1852.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their Agents everywhere.

Agents—C. MORSELL, cor. Third and K. sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 11-1m

☞ **FLAX SEED.**—We have just received several cases of very superior Flax Seed, from the East. It is of very superior quality; and there is no doubt but it can be grown here more successfully than in any other State in the Union. We really hope many will be induced to try this most valuable article. We are ready to furnish all who would like to try it as an experiment, with small parcels, *free*, if they will try it carefully. Those making it a business can be supplied in large quantities. WARREN & CO.,
v7-10 130 Washington street, San Francisco.

☞ **TO STOCK RAISERS.**—We earnestly invite stock raisers of all kinds to advise with us and give us information in regard to such stock as they may have for sale, and all the particulars of price, quality, &c. We are often inquired of relative to such matters, and can always find purchasers for almost all kinds of extra stock. Valuable stock will always sell; and we intend to keep a register of all such stock as may be in market, and assist in finding purchasers for it, and to do everything in our power to further the breeding of good stock.
v7-10 WARREN & CO.

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

☞ **BEAUTIFUL GIFT.**—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.
BY MRS. E. W. WIRT, OF VIRGINIA.

For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.

State Agricultural Society's Rooms, Sacramento;
v8-21 tf And 130 Washington street, San Francisco.

BOOKS FOR GARDENERS.

Just received, at the office of the FARMER, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

HOME! SWEET HOME!!

WHEN you visit the States, remember "Oak Hall," the Pioneer Clothing House, established in Boston, Mass., in 1841, where you will find every article of Clothing and Furnishing Goods (on the one price system), necessary to complete a genteel dress, for the domestic circle, the drawing room, or the church. The stock is daily replenished with goods manufactured for the Wholesale and Retail trade, and offers great inducements to purchasers.

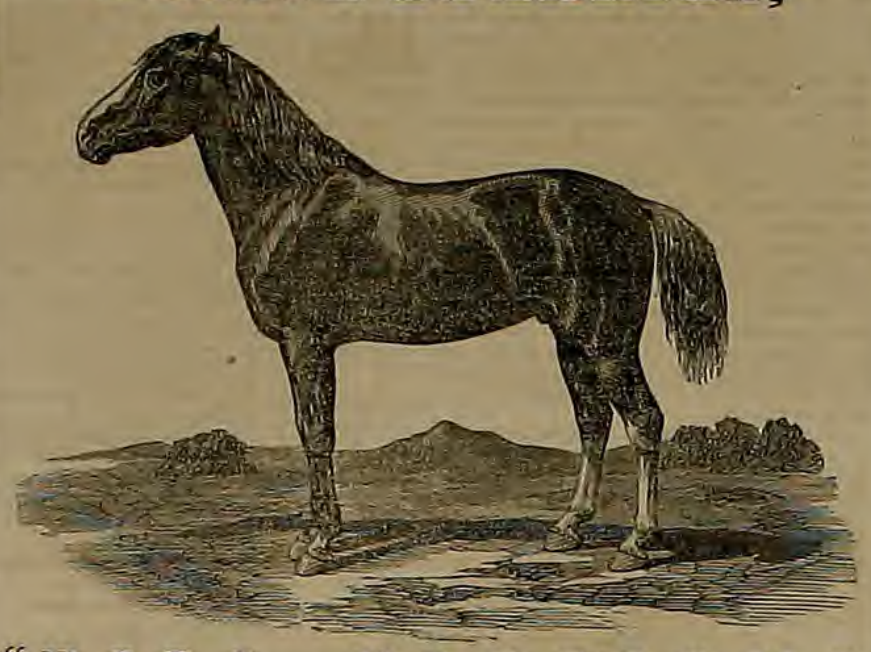
THE CELEBRATED
PACING STALLION,



"BILL BLOSSOM,"

PEACOCK STOCK,

And the only PACER of that Stock, will stand at

TATTERSALL STABLE, OAKLAND,

Commencing April 15th and ending August 1st, 1857, at

Seventy-Five Dollars per Season. - - - - - Terms Cash in Advance.

THIS CELEBRATED PACING STALLION WAS BRED IN CANADA, BY D. PREVEE, ESQ., IS FULL Brother to the celebrated Trotting Stallion FRANK PIERCE, now owned at White Hall, New York. He is seven years old, Chestnut Sorrel, Fourteen-and a-half Hands High, and possessed of great muscular strength.

He is sound in every respect and of disposition as gentle as could be desired in a horse, a fact which should not be overlooked by those who desire to raise fine Horses. He has a fine head and neck, tremendous shoulder arm, stifle and gaskin,—short back, well ribbed up, and is a very Smooth Pacer.

When in Canada he was known as Canada Peacock, and CHALLENGED Upper and Lower Canada. He was imported to Albany, N. Y., by O. C. Gunn, Challenged the State of New York, and in two matches won them both. From Albany he was brought to California, where he has had two matches, winning each. He has never yet been beaten, and now

Challenges any Pacing or Trotting Stallion in the United States,

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently *irregular* when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakespeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for oursel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to secure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promotes habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,316 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. Tola speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

Corner of California and Battery streets,
v7-3 3mis San Francisco.

A Gardener at Shares.

AN excellent opportunity can be given to a good practical as well as scientific gardener, for a series of years. To a person who could command a moderate capital a chance will be given that is permanent, and certain of paying very handsomely.

None need apply unless they can produce the very best testimonials as to ability and character, and one who is free from embarrassment, and can answer the advertiser fully.

A note addressed to "B. C." through the FARMER Office, with real signature, will receive prompt attention. v7-5 tf

A House and Garden Wanted.

A PRACTICAL working Gardener would like to take charge of some house and land, to keep it in order and improve it for one or two years, only requiring as payment the perquisites he could make by extra cultivation and sale of vegetables, &c., such as could be grown while keeping the place in order and safely.

Any person going East, or who wish a place kept in order for one or two years, without cost, can have satisfactory bonds that this will be done, if it is a good place, by addressing "T. Y. F" through the FARMER Office, with real name: then the advertiser will call on them.

☞ Please state where the place is v7-5 tf

[PREMIUM MANUFACTORY.]

Hudson's Golden California Mustard.

THE proprietor of this manufactory would invite all who feel an interest in California productions to visit his establishment and examine his Golden Mustard. This article is made of California Seed of the very purest quality, and put up in tins of 10 lbs., 5 lbs., 3 lbs., 1 lb. and ½ lb., and in glass of 1 lb. and ½; and it can be had at prices lower than Eastern prices, and at the same time proved to be purer and better than the imported.

The proprietor also manufactures a very superior article of Salad Oil, to which he desires to call the attention of the public. Sample bottles of his make will be sent to hotels and large purchasers when desired.

For any further information regarding this Mustard, we refer to the principal business houses in this city.

Purchases at wholesale or retail are specially invited to call at the office,

Ladies' Department.

[For the California Farmer.]

DOST THINK OF ME—SISTER?

When musing lone o'er days long past,
Dost thou to her a thought e'er cast,
Who wanders now far from her home
Alone, midst strangers—all alone?
With no one near her brow to press,
With loving kiss, and kind caress.

With saddened brow she now doth pine
To feel a sister's arms entwine
Around her form, as when in youth,
She deemed all hearts had naught but truth;
Ah! sad, indeed, her waking seems,
To find they were but fleeting dreams.

I know, dear sister, thou dost weep,
Regret and sorrow slumber deep
Within thy heart, for her whom fate,
With cruel hand doth seperate
From thee, and hath my footsteps bore,
Where I can see thee never more?

FLORENCE PERCEY.

Skating for the Ladies.—We do not believe there is any better made of feminine exercise in the world than that of skating. In the first place, it is eminently healthful: and in the next, we know nothing more strikingly graceful than the attitudes of young women, in that bracing and blood-reddening pastime. The dance is nothing to it; not half so animating, or bewitching, if we may use the strong language of the very young people. When we recommend anything to the ladies, it is very fit we should always keep in view those ideas of grace which must necessarily have such a great influence over them. A young lady, in a neat, succinct dress, balancing herself on a delicate pair of skates, and gliding along, beside a father or a brother, or in the midst of a merry group, would show a thousand times more attractively than another tripping down Broadway in all the glory of a balloon petticoat, and the evasive little bonnet of the Empress' pattern. There is no indelicacy in such *an ice* amusement, where ladies are properly attended, and know the movement. Female skating is no novelty; for in one of the lands of our forefathers (Holland), the milk-maidens, with their pails on their heads, are described as gliding over the ice with rare speed and security. Others, of a higher order, make skating their amusement. In this country, where women become so pale, thin and unhealthy, for want of the exercise which the sex accustom themselves to in other parts of the world, the custom of teaching the girls to skate, as well as the boys, is one greatly to be desired. American ladies are high-spirited; they also like a little innovation in the rough direction of the stronger sex. Well, here is what will suit their ideas of change. Something which, as we said before, will help to make active children grow into healthful women, and at the same time, give them color and developments—the grace and the symmetry which, we hope, will always be the characteristics of the gentler sex.—[Putnam's Magazine.

Table Manners.—The following extract from "The Widow Bedott Papers" satirizes the fashionable practice of guests flattering the entertainment of their hostess, while she on her part disparages it:

"What delightful biscuit," says Miss Grimes. "They are so," says Miss Skinner, "but Miss Gipson never has poor biscuit." "O shaw!" says Miss Gipson, "you aint in earnest; my biscuit is miserable—not nigh so good as common. I don't think the flour's first rate." "Miss Gipson, how *dew* you make crackers?" says Miss Stillman; "I never tasted none so good." "I *can* make good crackers, but them's very poor; the oven wa'nt jest right when I put 'em in." "I must have a piece of this cheese, it's *so* good," says Miss Lipincott. "Where *did* you get it?" "Well I got it of Old Daddy Sharpe; he ginnerally makes excellent cheese. I tell Mr. Gipson Old Sharpe's failed for once—that's what I call *poor* cheese." "Dew taste of this plum sass, Miss Peabody; they're *delicious*. It's a mystery to me how Miss Gipson always has such luck with her presarves. I never dew and I always take pound for pound tew." "This apple jel's the clearest I ever see," says old Miss Parker. "How *did* you make it, Miss Gipson? Didn't you do it in the sun? I'm sure it don't look as if it had been nigh the fire." "Now don't Caroline, I was ashamed o' my jel after seeing Miss Parker's, and I was a'most sorry I'd made any presarves since I'd eat some of Miss Peabody's and Miss Skinner's, their'n was *so* much nicer."

So they went on. The whipt cream and custard had to be gone over; Miss Gipson had to tell jest how 'twas made—what flavorin' she used, and all that—though she declared she was ashamed on't. The cake was praised up; they must know how much butter there was in this, how many eggs it took for that, and so forth. Miss Gipson run it down; she *could* make good cake, but somehow she failed that time. A person that didn't know how wimmen always go on at such a place, would a-thought that Miss Gipson had tried to have everything the miserablest she possibly could, and the rest of them had never had anything to hum, but what was miserabler yet.

Duties of a Mother.—She should be firm, gentle, kind, always ready to attend to her child. She should never laugh at him—at what he does that is cunning—never allow him to think of his looks, except to be neat and clean in all his habits. She should teach him to obey a look—to respect those older than himself; she should never make a command without seeing that it is performed in the right manner. Never speak of the child's faults or foibles, or repeat his remarks before him. It is a sure way to spoil a child. Never reprove a child when excited, nor let your tone of voice be raised when correcting. Strive to inspire love, not dread—respect, not fear. Remember you are training and educating a soul for eternity. Teach your children to wait upon themselves, to put away a thing when done with it. But do not forget that you were once a child.

Asking too Much.—A young couple were sitting together in a romantic spot with birds and flowers about them, when the following dialogue ensued:

"My dear, if the sacrifice of my life would please thee, most gladly would I lay it down at thy feet!"

"O, sir, you are too kind! But it just reminds me that I wish you'd stop using tobacco."

"Can't think of it. It's a habit to which I am *wedded*."

"Very well, sir, if this is the way you lay down your life for me, and as you are already wedded to tobacco, I'll take good care you are never *wedded* to me, as it would be bigamy."

Short Lectures.

Indorsing Notes.

There is a moral in the following well-considered remarks, from the Philadelphia Ledger, which should be often pondered. Wives, read them to your husbands. "It was well said by a very shrewd observer, that there are some things which every man has to learn for himself. It would seem as if the folly of indorsing what is called accommodation paper was one of them. Tens of thousands have been ruined in this way; yet tens of thousands continue to practice it. Many who indorse with immunity for years, discover, at last, that they also, in spite of their assertions that they would never be losers by it, are brought to bankruptcy by it. Sir Walter Scott, who had gone on, from year to year, adding acre to acre, farm to farm, woke up one morning to find that he was ruined through his indorsements on Constable's paper; and the rest of his life—a life shortened by excessive labor—had to be devoted, not to carrying out the favorite dream of his ambition, but to liquidate the debts thus contracted. Even Barnum, whose name had become synonymous with shrewdness, fell before this delusive habit. A calm observer is almost led to believe that there is an infatuation accompanying the practice of indorsing notes, which lulls sagacity to sleep, else how can he account for the fact that so many able men have, so to speak, gambled away their fortunes on this mercantile gambled away their fortunes on this mercantile *rogue et noir*. No man ought ever to indorse an accommodation note. The financiering which raises money in this way is radically wrong. Generally regarded as the cheapest, it is really the dearest method; for the friend who indorses for you is sure, sometime, to want an indorsement in turn; and he who once begins to indorse for another has put his fortune at the risk of a hundred casualties, beyond his own control. It is a game of hazard, which, once commenced, hardly ever can be stopped. Money can be got so readily by indorsing, the temptation is great to enter on speculations that would never otherwise be thought of, and hence it requires the coolest of heads and the most prudent operators to resist becoming too extended when a habit of exchanging indorsements has been fallen into. Nine men out of ten, sooner or later get beyond their depth. "Hard times" come on, and then insolvency follows, as a matter of course. It is always wiser to raise money on *bona fide* securities; and if these cannot be had, then to curtail one's business as fast as possible. When two men are in the habit of exchanging indorsements, they are really in partnership together; but a partnership only of risks—not of profits; and, worse yet, a partnership in which neither can control the other. So far, we have been speaking of cases in which there was a mutual consideration between the parties—an exchange of indorsements; but what shall we say of the man who indorses from motives of private friendship, and not as a business affair at all? Hundreds of such men there are, who indorse notes for social intimates to whom they would scarcely sell a bill of goods on credit, simply because they have not the moral courage to say no. It would be wiser, in such instances, to give the applicants at once whatever you can afford to throw away—for then you know where you are; because if you indorse for him he may involve you for a larger amount than you can pay; and be sure of one thing—when you pay, as most likely you will, it will be at a time when the payment is specially inconvenient. No private friendship, however close, justifies one man in asking another to indorse for him. He who takes offence when refused an indorsement is unworthy to be your friend; for he is ignorant wherein true friendship consists—that relation giving no man a right to ruin another. Take advice in time, and don't give or exchange indorsements, if you would escape sleepless nights, or avert probable insolvency."

Have a Purpose.

Sir E. Bulwer Lytton, in is recent address on the occasion of his installation as Lord Rector of Glasgow University, endeavored to impress upon the minds of the students the value of a definite purpose in life, in the following admirable language:

"Having once chosen that calling which then becomes your main object in life, cling to it firmly—bring to bear upon it all your energies, all the information you are elsewhere variously collecting. All men are not born with genius, but every man can acquire purpose, and purpose is the back-bone and marrow of genius—nay, I can scarcely distinguish one from the other. For what is genius? Is it not an impassioned predilection for some definite art or study, to which the mind converges all its energies, each thought or image that is suggested by nature or learning, solitude or converse, being habitually and involuntarily added to those ideas which are ever returning to the same central point, so that the mind is not less busily applying when it seem to be the most relieved from application. That is genius, and that is purpose—the one makes the great artist or poet, the other the great man of action. And with purpose comes the grand secret of worldly success, which some men call will, but which I would rather call earnestness. If I were asked, from my experience of life, to say what attribute most impressed the minds of others or most commanded fortune, I should say 'earnestness.'

"The earnest man wins way for himself, and earnestness and truth go together. Never affect to be other than you are—either richer or wiser. Never be ashamed to say, 'I do not know.' Men will then believe you when you say, 'I do know.' Never be ashamed to say, whether as applied to time or money, 'I cannot afford it'—'I cannot afford to waste an hour in the idleness to which you invite me—I cannot afford the guinea you ask me to throw away.' Once establish yourself and your mode of life as what they really are, and your foot is on solid ground, whether for the gradual step onward, or for the sudden spring over a precipice. From these maxims let me deduce another—learn to say 'No' with decision; 'Yes' with caution—'No' with decision whenever it resists temptation; 'Yes' with caution whenever it implies a promise. A promise once given is a bond inviolable. A man is already of consequence in the world when it is known that we can implicitly rely upon him. I have frequently seen in life a person preferred to a long list of applicants, for some important charge which lifts him at once into station and fortune, merely because he has this reputation, that when he says he knows a thing he knows it, and when he says he will do a thing, he will do it. Muse, gentlemen, over these maxims; you will find it easy enough to practice them, for when you have added them together, the sum total looks very much like—a Scotchman."

Feelings are like stars, which guide us only under a clear sky; but better is reason, the magnetic needle, which directs the ship when they are concealed and shine no more.

Why Homes are Unhappy.

Many divines of great authority, and hosts of mental, moral and social philosophers maintain that *perfect* happiness cannot be compassed by human beings while on this earth, but that such a blessed condition is kept in reserve as a future reward to the righteous. Experience seems to have established this doctrine. If we cannot, however, make our homes happy, in the strictest sense, we can at least do something towards making them pleasant, agreeable and comfortable—and a pleasant, agreeable and comfortable home is good enough for anybody. Such a home every man sighs and longs for; but how few, alas! ever come into possession of it—and why? Why are so many homes, even of prosperous men, but disorderly, slatternly abodes of discord, discontent and discomfort? The reason, in nine cases out of ten, is because the nominal head of the family does not attend properly to his home duties, but leaves all the wearying cares and burdens, and all the aggravated annoyances of the household to be borne by his wife, without any show of interest or sympathy on his part.

Men often say: "I plan and toil to get money wherewith to support my family, and that is all that should be expected of me." By no means. The mere earning of money wherewith to support a family, is the easiest part of the life struggle. The taking care of the family,—the watching and nursing of it, in health and in sickness, through the day, and often through the night—the innumerable annoyances, the constant and ever increasing cares and drudgery, which are all the more harassing because so many of them are of such a petty and intangible nature that (like unseen foes) it is impossible fairly to meet and annihilate them—of all these things the husband too often knows nothing and cares nothing. Hence, the wife, fretted in temper and broken in spirit by her overwhelming and never ending cares, and withered in her affections from a lack of sympathy on the part of her husband, becomes more and more discouraged and disheartened, until, weary in body, and still more weary in mind and heart, she at last "gives up," and disorder takes possession of the household, and discomfort crouches by the hearthstone.

The husband must be the keystone of the domestic arch, or it will crumble into ruin; he must give his wife sympathy in her domestic trials, or her heart and energy will wither; he must mingle with his children's pastimes, or the gloom which his presence occasions will break forth into annoyances in his absence; he must, in short, *be one of his family*, in spirit and in person, and not merely their quartermaster, who thinks his whole duty is done when he has furnished them with supplies.

A man's true wealth," (said Mahomet, and it is a maxim that Christians may indorse, if it is in the Koran), "a man's true wealth, hereafter, is the good he does in this world to his fellowmen." When he dies, people may say, "what property has he left behind him?" but angels will ask, "what good deeds has he sent before him?"

Young Ladies' Seminary, Benicia.

MISS MARY ATKINS, : : : : : : PRINCIPAL.

THE School Year of this Institution is divided into two terms of five months each; but the term commencing January 5, 1857, will close May 1st, 1857, in order that the semi-annual vacations may take place hereafter in May and October.

At the close of each term there will be a thorough examination of the pupils in all of their studies.

The Course of Instruction is such as is usually pursued in High Schools, and also includes the accomplishments of Drawing, Painting, Vocal and Instrumental Music.

The government of the school is gentle, but decided. A daily account of the recitations and deportment of each pupil is sent, monthly, to the parents, who are thus regularly informed of the progress of their daughters.

All of the pupils board either with their parents or at the seminary, and are under the special care of their parents, or of the teachers of the Institution.

The School is open to inspection at any time, and friends are cordially invited to visit it; but no pupils can receive calls from any persons, excepting those introduced by the parents and guardians to the principal.

TERMS: PER MONTH.

Tuition in the Higher English Studies	$ 8 00
" " Common "	6 00
" " Music and use of Instrument	10 00
" " Ancient and Modern Languages	5 00
" " Drawing and Painting	4 00
For Board (per week)	6 00
For Washing (per session)	25 00

No extra charge will be made for Vocal Music or Embroidery: neither are the pupils required to furnish their rooms, bedding, &c.; but each pupil must have every article of clothing distinctly marked with her name.

Payments are to be made invariably at the beginning and middle of each term, in advance.

HOTELS, &c.

Estudillo House,

SAN LEANDRO, Alameda County.

THE subscribers respectfully inform their friends and the public that they have purchased the interest of the former proprietors in this popular and well-known establishment, and trust, by strict application to business and attention to the comforts of their patrons, to merit a share of public patronage. It is their intention, as soon as practicable, to make great improvements on the premises, and their patrons may rest assured that none but the choicest of Liquors will ever be found at their house. The table will be supplied with the best the market affords, and the rooms are furnished in a manner not to be surpassed by any hotel in the State.

To those of our friends who may not be "posted," we beg leave to say, that our house is located at the county seat of Alameda county, six miles from San Antonio, to which place the Contra Costa boat makes three trips a day. Stages leave San Antonio immediately on the arrival of the boat, and return in season to meet her on her return trips.

San Leandro is situated on the main road to San Jose, in the center of the finest farming district of country in this State. The easy access from the city to this delightful village, renders it a very desirable place of resort for gentlemen with their families who may wish to retire for a season from the bustle of city life. The house is admirably adapted for the accommodation of families, and particular attention will be paid to those who may honor us with a visit.

The long experience of Mr. Biggs, formerly one of the well-known firm of Biggs & Kibbe, is sufficient assurance that the public will always be able to find, at this house, the choicest articles that the market affords.

For sale by WARREN & CO., v7-7 Fourth street, Sacramento

PROSPECTUS OF VOLUME VII. OF THE CALIFORNIA FARMER.

The California Farmer was established in January, 1854; its success was a problem that the future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the virgin soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer Farmer expected to meet with obstructions, trials and difficulties, that would try our strength and temper too. But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he must meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—so our humble selves in the enterprise of the journal we then presented, we had faith—we were willing and ready to labor and toil—to do and to suffer—confident that ere long the goodness of the cause we had espoused, its happy and beneficial influences, with dignity, nobility, and prosperity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good—to them we and our cause are known—our desert at their hands is manifest.

To those who are strangers to us and the journal we publish, we again present the California Farmer.

Our journal is devoted to Agriculture and all the useful sciences—it will ever be our aim to have the Farmer the true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the true friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Homes of our glorious State. Free from every political, sectarian, or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that our means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication, we have access to facilities for information rarely obtained.

In the department of Education, of Home Influences, we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artisans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall esteem most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it in comparison, and abide the issue.

With grateful acknowledgments for a generous sustaining in years of trial, and with the assurance to our patrons of many improvements in the opening year, we ask their continued favor and generous influence for this journal.

The terms of the Farmer are, for the year (always in advance), $5.

Offices of Publication—130 Washington street, San Francisco, and State Society's Rooms, Fourth street, Sacramento. WARREN & CO., Editors and Publishers.

MEDICINES, &c.

J. L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

BOOK AND JOB

PRINTING,

WITH THE MOST IMPROVED FACILITIES, AND NEWEST STYLES OF TYPE.

EXECUTED AT THIS OFFICE

In the Best Style of the Art!

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets, SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

v6-14 R. H. VANCE.

To the Farmers.

THE CELEBRATED

PACING STALLION,

"BILL BLOSSOM,"

PEACOCK STOCK, AND FULL BROTHER TO THE CELEBRATED TROTTING STALLION

"FRANK PIERCE,"

NOW OWNED AT WHITE HALL, NEW YORK, WILL STAND FOR MARES AT

TATTERSALL STABLE, Oakland, Alameda County,

At $100 Per Season!

FROM APRIL 15TH.....TO AUGUST 1ST, 1857.

TERMS CASH---IN ADVANCE.

HE IS A CHESTNUT SORREL, STANDS FOURTEEN AND A-HALF HANDS HIGH, AND IS SEVEN YEARS OLD this Spring. He is a SURE FOAL GETTER, having never failed in any one instance. "BILL BLOSSOM" was bred in Canada by D Prevee, and imported from there by O. C. Gunn, to Albany, N. Y., and from thence to California. While he was owned in Canada he was known as "Canada Peacock;" and when four years old challenged all Upper and Lower Canada. He has never yet been beaten, and challenges now the United States for any Stallion Trotter or Pacer, one mile heats, best two in three, or best three in five (in harness), for from $1,000 to $5,000; and any Trotting Stallion in the State, two mile heats, best two in three, for $1,000 to $5,000 (in harness), over the Pioneer Course, San Francisco.

While in Albany, he challenged New York State. He had two races, and won them. He has had two races in California, and won them also.

☞ Gentlemen having Mares at a distance, may be assured every care and attention will be shown them at a moderate charge, and good pasturage for them.

The Farmer's Drill.

[PATENTED, AUGUST, 1853.]

THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct. 28th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.

Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.

This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.

For full particulars address

M. G. GRIFFITH, Agent, Diamond Springs, Cal.;
Or to C. FINKBONER
(Of the firm of G. W. Stewart & Co.),
v7-2 3m* Grain Dealers, San Francisco.

From the East.

THE steamship Golden Age, James T. Watkins, commander, arrived on the 12th inst., with eastern dates to the 20th March, and from Europe to March 4th. The Golden Age brings 776 passengers, all well, with little or no sickness on board during the passage.

The following are the members of the new Cabinet, as confirmed by the Senate:

Secretary of State—Gen. Lewis Cass.
Secretary of Treasury—Hon. Howell Cobb.
Secretary of War—Hon. John B. Floyd.
Secretary of Navy—Hon. Isaac Toucey.
Secretary of Interior—Hon. Jacob Thompson.
Attorney General—Judge Black, of Pa.
Postmaster General—Hon. A. V. Brown.

Lord Napier, the new British Minister, presented his credentials to the President on the 10th March; the interview and speeches upon which occasion were very cordial.

Appropriations have been made for the exploration and verification of the surveys for a ship canal at the Isthmus of Darien, *via* the Atrato route.

The President has caused an exequatur to be issued to H. Hanneman, Esq., as the Consul from Prussia at San Francisco.

Postmaster General Brown has issued an order abolishing the system of agents to accompany the California mails.

California 7's of 70 at New York, are quoted at 64½.

Abner Pratt, of Michigan, has been appointed Consul at Honolulu, S. I. Salary $4,000.

J. Patton Anderson, of Washington Territory, to be Governor of said Territory, after March 17, 1857.

James U. Nesmith, of Oregon, to be superintendent of Indian Affairs for Washington and Oregon.

THE DRED SCOTT CASE.—The opinion of the United Supreme Court has been delivered in the famous Dred Scott case. Chief Justice Taney gave a full and elaborate statement of the views of the Court. The decision has created much excitement. The Court has decided, that,

Negroes, whether slaves or free, that is, men of the African race, are not citizens of the United States by the Constitution.

The legal condition of a slave in the State of Missouri is not affected by the temporary sojourn of such slave in any other State, but on his return his condition still depends on the laws of Missouri.

As the plaintiff was not a citizen of Missouri, he, therefore, could not sue in the Courts of the United States. The suit must be dismissed for want of jurisdiction.

The delivery of this opinion, it is stated, occupied about three hours, and was listened to with profound attention by a crowded Court Room.

Judges McLean and Curtis dissented.

TURNER BROTHERS.—Among the many kinds of wine manufactured in this State, there is a very celebrated kind known as "Turner's Ginger Wine," manufactured by the firm of Turner Brothers, of San Francisco. The same firm have a house in New York city, and one in Buffalo, N. Y., largely engaged in the same business. They manufacture and put up all kinds of preserves, jellies and fruits; and they give full employment to a large number of workmen, and consume large amounts of the products of our State. Turner Brothers give constant employment to twenty-five men in this city, and often more, and their sales, of their own manufactures, amount to some 5,000 packages per month. Their warehouse is forty by eighty feet, and two stories high—capital employed in the entire business, $150,000. They make their own boxes and cases, consuming nearly 10,000 feet lumber per month. The water tanks contain 6,000 gallons. In the manufacture of these celebrated sirups, they use sugar made from the sugar beet, and import it from France and Germany in large quantities. Here is a subject of great to moment to Californians who are in charge of a climate and soil surpassing that of any country where the beet sugar is made; and we ask our cultivators if they cannot supply Messrs. Turner Brothers with California beet sugar, and thus save the gold now sent abroad and give it to our own workingmen at home. The manufactory of Turner Brothers is worthy of a visit by all our citizens. It is situated on Market street, near Kearny, and the proprietors are gentlemen who will take pleasure to show what a California manufactory should be.

LONGWORTH'S SPARKLING AND STILL WINES. Proud as we are of the fine California wines that will soon drive foreign wines from our markets, we are also proud of the American wines of the celebrated Longworth brand. These are now taking rank with the most delicious wines in use, and are found on the tables of our connoisseurs as among their finest. The sparkling Catawba and Isabella are indeed considered rare wines, and are found side by side with Max Sutaine & Co.'s celebrated Cabinet Champagne. All these choice wines are on sale at the house of S. H. Meeker & Co., on Front street, San Francisco—a house long distinguished for the very best wines in the market.

THE SECRET OUT AT LAST.—Thousands have asked the question during the past month, "Who wrote the Physiology of Marriage?" It is a first rate book they all say; but who is "The Old Physician?" By reference to an advertisement of Messrs. Jewett & Co., in our paper to day, it will be seen who the "Old Physician" is.

HOLLOWAY'S OINTMENT.—The first surgeons of this great country are generously and nobly recommending this celebrated Ointment to their patients and the public generally, as an effectual cure for wounds, sores and ulcers, even when all other means have failed. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot.

ONLY those who have suffered all the miseries of Dyspepsia in its various forms can appreciate the value of a medicine that will *cure* this disease. To all who would find a remedy we would say, try the Oxygenated Bitters.

THE Sacramento river stood at dusk, Thursday evening, at sixteen feet three inches above low water mark.

TRAVELING.

Pacific Mail Steamship Company's Line
TO PANAMA,
CONNECTING
VIA PANAMA RAILROAD

BOOKS, &c.

The Fruit Garden.
By P. BARRY,
Of the Mount Hope Nurseries, Rochester, N. Y.

A TREATISE intended to illustrate and explain the Physiology of Fruit Trees; the Theory and Practice of all operations connected with the Propagation, Transplanting, Pruning and Training of Orchard and Garden Trees, as Standards, Dwarfs, Pyramids, Espaliers, &c; the laying out and arranging of different kinds of Orchards and Gardens; the Selection of suitable Varieties for different purposes and localities; the Gathering and Preserving Fruits; Treatment of Disease, Destruction of Insects; Description and Use of Implements, &c. Illustrated with upward of 150 Figures, representing the different parts of Trees, all Practical Operations, Forms of Trees, Designs for Plantations, Implements, &c. 1 vol., 12mo., cloth. Tenth Thousand.

HOMES FOR THE PEOPLE IN SUBURB AND COUNTRY; Or, THE VILLA, THE MANSION AND COTTAGE. Adapted to American Climate and Wants. By Gervase Wheeler. 1 vol., 12mo., with 100 Engravings. Third Edition.

"Good taste, practical common sense, and an eye to the wants of the country appear throughout the work, while its designs and illustrations will prove an invaluable assistance to those who wish to build, and to build wisely and well."—*N. Y. Evangelist.*

"The author's study has been to furnish models for convenient, tasteful and even elegant suburban and country dwellings, from the lowest to a high cost, and to afford all the necessary information for their construction. We should like to see such books wide spread, as our national architecture needs improvement."—*Philadelphia Presbyterian.*

"There are abundance of books on architecture and on landscape gardening, but an actual absence of such another volume as the present. The designs are exceedingly tasteful, and imbued with the highest spirit of architectural beauty."—*N. Y. Express.*

Copies of either of these books sent by mail (post-paid), for $2, remitted to
CHARLES SCRIBNER,
v7-8 3m 377 and 379 Broadway, New York.

THE FARMER'S GUIDE. A Treatise on the Diseases of Horses and Black Cattle, with Instructions for the Management of Breeding Mares and Cows. By James Webb, Veterinary Surgeon.
HOW TO CHOOSE A GOOD MILK COW; or, a Description of all the Marks by which the Milking Qualities of Cows may be Ascertained. With a Supplement on Dairy Cattle, their Qualities, Management and Productive Results, with Hints for Selecting. Illustrated with Engravings.
☞ Samples of the above Books can always be seen at the Office of CALIFORNIA FARMER, where Catalogues will also be found. v7-5

The Most Successful and the Best.
NOW COMPLETE AND FOR SALE,

SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.
The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.
By EPES SARGENT, author of "Standard Speaker," &c.

The following are nearly ready:
Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

Rural Publications.

THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages. Two Dollars per annum. "Without question the best Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."
THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.
THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.

SPECIMEN NUMBERS
Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to

The Great Stump Puller.
WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:
The Orange Improved Stump Machine.
Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!
My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.
It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.
It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.
The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.
Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!
It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.
The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will save capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO

New Cultivator.
THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measures operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who wish finely cultivated soil it has no equal.
Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.
All persons are invited to call at the workshop and examine it.
R. BEECHING, Manufacturer,
v7 5 3m 35 Pine street, San Francisco.

Hydraulic Hose and Pipes.
A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. Globe Pattern Rubber Stocks, with and without Steel Rings. The whole coupling together in the most thorough workmanlike manner complete for use placing in the hands of miners the most valuable gold washing apparatus ever yet introduced into the mining regions, and one which is destined to do more for the development of our mountain treasures, than all others yet introduced.
Orders per Mail or Express promptly executed.
BRYANT & CO., 68 Battery street.
P. S.—A full assortment of Rubber and Leather Belting. v7-6 2m

MEDICINES, &c.

SANDS' SARSAPARILLA,
FOR PURIFYING THE BLOOD,
AND FOR THE CURE OF
Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the STOMACH, the CIRCULATION, and the BOWELS, and thus three processes, which are ordinarily the result of THREE different kinds of medicine, are carried on at the same time through the instrumentality of THIS ONE remedial agent. Its great merit is, that it meets and NEUTRALIZES the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.
LYNN COUNTY, Oregon Ter., March 11, 1856.
Messrs. A. B. & D. Sands, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted, and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 1st of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were reduced, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swellings in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor, as all our neighbors will certify.
Yours, respectfully,
CALEB DAVIS.
Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

ROMAN EYE BALSAM,
FOR INFLAMED EYE-LIDS.
The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eye-lid evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.
READ THE FOLLOWING EVIDENCE.
NEW YORK, July 15, 1856.
Messrs. A. B. & D. SANDS: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your ROMAN EYE BALSAM, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years.
Yours, &c.,
O. B. WILLIAMS, 262 BROADWAY.
PRICE, 25 CENTS PER JAR.

THE LAW OF NEWSPAPERS.
1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscriptions.
2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.
3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.
4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.
5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.
☞ Postmasters would oblige, by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.
Postage of the Farmer.—The Postage of the FARMER to any part of the State is only *Six cents per quarter, or 25 cents per year.* This is the lawful postage established by Congress and when more is exacted it is a violation of law

And Journal of Useful Sciences.

VOLUME VII. SAN FRANCISCO, CALIFORNIA, FRIDAY MORNING, APRIL 24, 1857. NUMBER 15.

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.

By WARREN & CO.

PUBLISHED EVERY FRIDAY MORNING,

Simultaneously at Sacramento and San Francisco.

Office—*on Fourth street, between J and K, Sacramento.*
—No. 130 Washington street (up stairs), San Francisco.

TERMS.—*Five* dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis.

☞ Advertisements in this journal will have a circulation and notice unequaled.

☞ **Advertisements and Subscriptions must be paid for in Advance.**

Agricultural Reviews and Essays---No. 9.

Goldsmith, and his "Animated Nature."

"The Life and Times of Oliver Goldsmith. By John Forster, of the Inner Temple, Barrister at Law." (London.)

"A History of the Earth and Animated Nature. By Oliver Goldsmith." (Blackie & Son, Edinburgh, London, and New York.)

(ARTICLE 1ST.)

Was there ever in human nature such a strange anomaly as Dr. Goldsmith? A man who, to use the words of Dr. Johnson, "was a genius sublime, lively, and versatile; who left untried no species of writing, and who treated nothing which he did not adorn;" but who at the same time was the butt of everybody's ridicule, the prey of sharpers and imposters, and a companion of gamblers and drunkards?

At the age of seventeen, he left the humble roof of his father, a poor Irish clergyman, to attend the classes at Dublin University, and for cheapness was obliged to enter as a sizar. There he was idle and thoughtless, and the solitary instance in which he received any honor was gaining an exhibition worth thirty shillings ($7.50), for which his brutal tutor afterwards knocked him down, because he celebrated the occasion by giving a dance at his rooms! But the unlucky Goldsmith was ever imprudent, and poorly qualified to buffet with the world for the bare necessaries of life. His father died when he was at college; and as his mother was in very reduced circumstances, he was urged by his friends to take orders in the church. He was too young by two years; but instead of directing his attention to theological studies, he spent his time, during the interval, in rambling about the country, in playing whist and the flute, and in telling stories and singing songs in a club which met at the village-inn; and, as a natural consequence, when he presented himself before the bishop he was refused ordination.

He now had recourse to teaching, as a private tutor; but with his usual imprudence he got into a squabble over a game of cards, and was dismissed; and went back to his mother, with thirty pounds and a horse. Thus provided, he again set out into the world, like another Gil Blas, to push his fortune anew. But at the end of six weeks he again returned to his mother, with a worse horse and no money. To account for his deficient exchequer, like some of our delinquent officials, he told a cock-and-bull story, of how he had gone to Cork, and paid his passage in a ship which was bound to America, but that the rascally captain, after pocketing the money, had sailed without him. We are justified in supposing that this story was a fabrication, as there is sufficient evidence to show that he afterwards resorted to similar expedients to move the sympathies of his friends.

Balked in his ideas, both as to holy orders and emigration, if ever he was in earnest about either, he resolved to try law, and was furnished by an uncle-in-law with fifty pounds, to enable him to make a respectable appearance in London, where he meant to study. But this little fund he gambled away with an acquaintance in Dublin, and was once more thrown back penniless upon his friends. So he gave up law, and concluded to try medicine; and was again supplied by the same kind uncle with the necessary means, to enable him to follow his studies at the University of Edinburgh.

There he remained for a couple of years, when, inspired by his love of rambling, he concluded to visit the Continent. His pretended reason for doing so, as he wrote to his uncle, in announcing to him that he had drawn on him for twenty pounds, was to enable him to prosecute his studies at the medical schools of France. But instead of going to France he went to Holland; and we find him at Leyden, humbly pleading to his uncle, in his own inventive way, the mishaps of his voyage. But his generous uncle had become affected with mental imbecility, and his other friends were deaf to his appeals, and he had, in consequence, to depend on his own exertions.

There is little doubt but the George Primrose of his "Vicar of Wakefield" is intended to represent himself, but whether he tried the effects of his eloquence, as George did, on the principal of a Dutch University, during his residence in Holland, to install him as professor of Greek, where it was considered a superfluous accomplishment, and which the old professor said he had lived all his life without ever feeling the want of, we have no information. At Leyden he depended for his subsistence on borrowing money and giving lessons in English. He also gambled a little. But when fortune did show in his favor he continued to play on till he lost all he had.

So he concluded to leave Leyden, and borrowed a small sum from a young student to carry him on his way. But passing the shop of a florist, he observed some tulip roots, which flowers he knew were much prized by his uncle, and unable to resist the temptation he walked in and paid away the whole of the borrowed money, and next day left Leyden with five dollars in his pocket, one shirt on his back, and his flute in his hand.

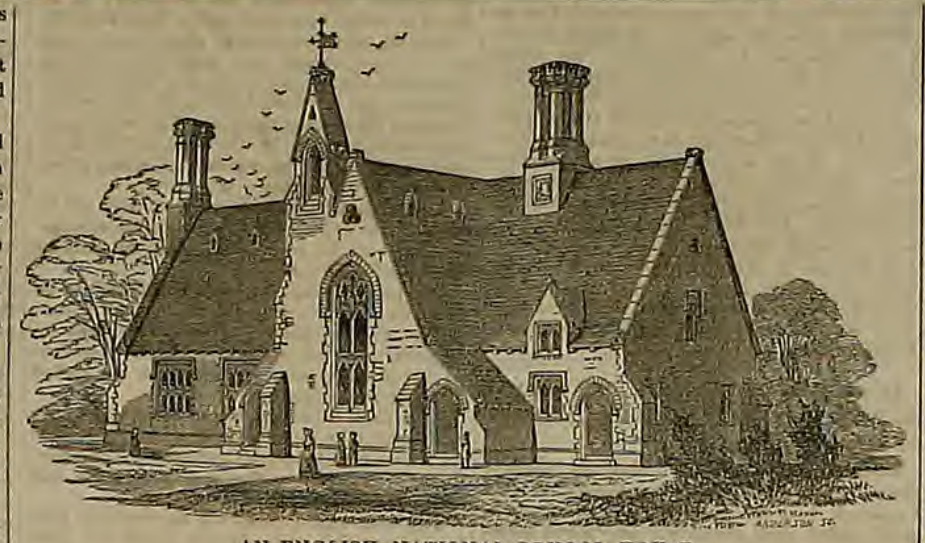
He took the course described in "The Traveller," and made a pedestrian tour through parts of Flanders, France, Germany, Switzerland, and Italy—sleeping in barns, now depending on the charity of convents, and now turning itinerant flute-player to get bed and board.

He was just one year on the Continent, during which time he managed to get a medical degree at Padua. But it was never of any service to him. On his arrival in England, he endeavored, it is true, to establish himself, as he says, as "a poor physician to the poor;" but, as he had always been, he was unsuccessful, and was glad to accept a situation as corrector of the press for Richardson, the author of those old-fashioned novels, Sir Charles Grandison, Clarissa, and Pamela—books which, to use the words of Goldsmith in regard to "The Babes in the Wood," "everybody has read at some time of his life, and at some time of his life has admired." But Richardson was then in the zenith of his fame, and probably was too much inspired with his own importance to detect the superior abilities of his humble assistant.

His engagement with Mr. Richardson only lasted a year, at the expiry of which time we find him employed as usher in the academy of a Dr. Milner, at Peckham, whose son had been his fellow-student at Edinburgh. He gives, in some of his papers in the "Bee," a pitiful description of his situation and feelings in that employment, which, though he means it to apply to ushers in general, has evidently more particular reference to himself. He was the laughing-stock of the boys, whose favor he endeavored to conciliate by dividing between them and beggars, and people whom he knew to be in want, the whole of his salary on the the very day it was paid. This so provoked the provident Mrs. Milner, that she proposed to Goldsmith the propriety of his giving her his money to keep for him, as the boys did. "Indeed, Madam," replied the good natured man, "there is equal need."

But while in the employment of Dr. Milner, a circumstance occurred which, if it had not the effect of being of so much service to himself as he might have made it, was destined eventually to bring him into notice, and add to the list of writers one of the most elegant and agreeable that ever took a pen in his hand. Dr. Milner was a contributor to the "Monthly Review," and on one occasion when Mr. Griffiths, the proprietor of that periodical, was dining with him, Mr. Griffiths was forcibly struck with some remarks of Goldsmith's, and requested him to furnish for the Review a few specimens of criticism. The result of which was, he was employed by him. This was a situation for which Goldsmith was but ill-adapted. For, though himself one of the most beautiful of writers, he was ever more ready to find excuses for imperfections than to discover faults in others, whether in their lives or writings. In fact, he acknowledges himself that it was not for a year after this that he discovered that he was a great writer. But in one of his letters at that time he playfully writes to a friend: "There will come a time, no doubt it will, when the Scaligers and Daciers will vindicate my character, give learned editions of my labors, and bless the times with copious comments on the text. You will see how they will fish up the heavy scoundrels who disregard me now. How they will bewail the times that suffered so much genius to be neglected!" The dunces are not yet all dead, and they are as confident of their importance as ever. But do not exult, ye "heavy scoundrels!" if by your united weight ye occasionally succeed in checking for a time the upward progress of genius. The predictions of Goldsmith have been fully verified. What a consolation would it have been to the humble occupant of his garret, who dated his letters from the Temple Exchange Coffee House, near Temple Bar, to have known that Mr. Forster, one of the most talented literary men in London (the editor of "The Times" newspaper?) would have been at so much pains in hunting up every little incident in his incipient career!

As Goldsmith did not continue long in the employment of Mr. Griffiths, he was glad to get back from the garret life which he had been obliged to adopt, to the loathed occupation of again being usher to Dr. Milner. On this occasion, however, the situation which he held was an advance on the former, as, owing to the declining state of Dr. Milner's health, he had partly to discharge the duties of head master. Dr. Milner, too, used his influence in procuring for him a medical situation in India, which it was presumed might be made a lucrative one. But in this he was destined to be disappointed. While he was waiting for supplies from his friends, with which to provide his outfit, the warrant of his appointment was withdrawn. What could he do? Poor hapless Goldsmith! He had once more placed his hopes on the medical profession, and he concluded he must not be too fastidious. So he presented himself before the examiners of Surgeons' Hall, to qualify for the office of an hospital mate. Many a spruce young student, that day, obtained his diploma. Of all that applied there was but one who was found unqualified—the poor, blundering, vulgar-looking Oliver Goldsmith!



AN ENGLISH NATIONAL SCHOOL HOUSE.

In his distress, Goldsmith again had recourse to his pen, and entered into new arrangements with Mr. Griffiths and others. But all that he made was barely enough to procure him a subsistence. However, he was gaining ground as a literary man; and had the good fortune, about this time, to meet with and secure the friendship of the distinguished Bishop Percy, who was the first to point out and collect the important historical information which England possessed in her old ballads. By his instrumentality he had a meeting at his lodging with Dr. Johnson, where the three supped together. Neither of his new friends at that time had attained the eminence which they afterwards reached. Percy was not then a Bishop, nor Johnson a Doctor. But they were very different friends from his sharp-sighted and selfish patrons of the press, for whom he had so long, and for so little, been doing hard work, especially Johnson. He was the very man Goldsmith wanted for a friend. Goldsmith was weak and vacillating; Johnson sturdy and independent. Goldsmith's foibles connected him with low associates, and sometimes degenerated into vices; Johnson's morality was unbending, and his friendship only awarded to those who deserved it. Goldsmith was the prey of impostors; Johnson, a man whom the most daring were afraid to tamper with.

A brighter day was now dawning on poor Goldsmith, which if it did not make him a wealthy man, which his improvident habits rendered impossible, gained him a ready admission into the best society, and made him be recognized by the learned men of his own and all succeeding times, as one of the brightest ornaments of the literary world. Goldsmith had spent his only guinea, which had been sent him by Johnson to supply immediate wants, and over a bottle of Madeira was "nursing his wrath" against his landlady, who had arrested him for arrears of rent, when Johnson himself appeared, to assist him with his advice. As they were talking over his misfortunes, Goldsmith showed his friend the manuscript of the "Vicar of Wakefield," which Johnson immediately disposed of for sixty pounds. The bookseller, however, who had paid that price, was afraid to publish it, as on mature reflection he thought it was doubtful whether it would repay the expense of printing. But the sixty pounds left Goldsmith enough, after paying his landlady, to make him comparatively easy; and "The Traveller," which he had commenced long before, being soon after finished and published, his reputation was at last secure.

It would be impossible for me, in a newspaper article, to give an account of Goldsmith in his after career; of the learned men with whom he got acquainted; and the amusing events which were daily occurring in the brilliant circle of his literary friends. The reader who feels an interest in Dr. Goldsmith (and who does not?) will doubtless avail himself of the privilege of reading the valuable work of Mr. Forster, of the former portion of which I have endeavored to give a feeble outline.

There never was a writer possessed of more varied acquirements than Dr. Goldsmith, or one who has been more eminently successful in every department of literature which he attempted. "The Vicar of Wakefield," as a novel; "She stoops to conquer," as a play—the former pronounced by Sir Walter Scott the best novel in the English language, and the other, by almost universal consent, the best comedy; "The good natured man," but little inferior to it; "The Traveller" and "The Deserted Village" as poems; his Abridgments of English and Roman History; his "Citizen of the World;" and his "Animated Nature"—each, without the others, would have been enough to have secured him, in the estimation of a reflecting posterity, the reputation of a literary man of the highest talent, although the age in which he lived had been regardless enough to overlook his merits. But when we find in one man such a diversity of talent, we are compelled to look closely at his life, before we can become reconciled in any shape to the brief character of him, wickedly though wittily given by his cotemporary Horace Walpole,—that "he was an inspired idiot," which Mrs. Piozzi, in her old age, says "was very true;" or of his intimate acquaintance Cooke, who told the poet Rogers that "he was a fool." The remark of Dr. Johnson, who was a more cool observer, appears near the truth: "No man was wiser when he had a pen in his hand, or more foolish when he had not." But he was a man of kind impulses, and of a generous heart. "Tread lightly on his ashes, ye men of genius, for he was your kinsman; weed his grave clean, ye men of goodness, for he was your brother!"

I intended to have included in this article a notice of "The Animated Nature," as a work particularly suitable for a farmer's library; but having already spun it out so long, from a sort of fellow-feeling for the illustrious Goldsmith, I must reserve my remarks for a future occasion.

AGRICOLA.

An English National School-house.

THE engraving this week, shows one of the National School-houses at Tamon, erected at the cost of about £1000. It is interesting chiefly as a study of the quiet domestic character, which the English give to this species of building. One can easily believe that something of home affections and love for good order and neatness, would naturally grow up in the mind of every pupil educated in such a school.

The first thing that strikes an American eye is the "very humble" appearance of the building, arising from the lowness of the walls. But this is, internally, amply made up by the great hight of the roof—the whole space being open, and the under side of the timbers and wood-work of the roof being exposed to view. This gives a lofty and spacious appearance to the interior, and an abundant supply of fresh air, connected as the space is with every means for ventilation.

This style of building will hardly be followed, exactly, in this country, but there are many details, and some hints in composition, about this domestic style, that are well worthy of study by those designing or about erecting buildings of this class.

The above we find in our Horticulturist of 1852, and select it, at this especial moment, as the return of "May-day" brings before us so many groups of happy children, with their teachers and parents, that we know of no picture more beautiful to present to them than the home of childhood's studies.

It should ever be the aim of all to make the school-house one of the most pleasant spots in a child's memory—so pleasant and agreeable, that the mind should turn to it with delight. This will secure, in the affections of our youth, a thirst for knowledge that shall insure to our country an improved race of men and women.

SPROUTS ABOUT TREES.—Allow no suckers or sprouts to issue from the roots of your fruit trees; cut them all even with the surface and arrest every new development as soon as it appears. Every particle of new wood from this diminishes the vital force of the system, without yielding anything valuable in return. Pear trees are more seriously injured by a neglect of this duty than other trees, as they are more delicate and less hardy.—[Germantown Telegraph.

The Great Work Moves On.

EDUCATE the Workingman, is the word for the age now, and we find a desire in every State springing up among the masses, to awake the Industrial classes to action, and to make them instrumental in the *great work of progress.* The subject of Industrial Institutes was brought up for discussion in the National Agricultural Society, at its last meeting, and committees were appointed for conference with other States. Among the resolutions offered to the National Society we find some from the great State of Illinois, relative to the subject, which speak home the true wants of each of such an Institution, and we rejoice to know California is alive to the subject. We hope every State will respond and act also. The following are the resolutions:

TO THE NATIONAL AGRICULTURAL SOCIETY:

The undersigned, member of a Committee appointed by an Educational Convention held at Springfield, Illinois, in January, 1855, would most respectfully beg leave to call your attention to the following

RESOLUTIONS

Of the General Assembly of the State of Illinois, relative to the Establishment of Industrial Universities, and for the Encouragement of Practical Education among the people—unanimously adopted.

WHEREAS, The spirit and progress of this age and country demand the culture of the highest order of intellectual attainment in theoretic and industrial science: *And whereas*, it is impossible that our commerce and prosperity will continue to increase without calling into requisition all the elements of internal thrift arising from the labors of the farmer, the mechanic, and the manufacturer, by every fostering effort within the reach of the government; *And whereas*, a system of Industrial Universities, liberally endowed in each State of the Union, co-operative with each other, and the Smithsonian Institute at Washington, would develop a more liberal and practical education among the people, tend the more to intellectualize the rising generation, and eminently conduce to the virtue, intelligence and true glory of our country; Therefore be it

Resolved by the House of Representatives (the Senate concurring therein), That our Senators in Congress be instructed, and our Representatives be requested, to use their best exertions to procure the passage of a law of Congress donating to each State in the Union an amount of public lands not less in value than *five hundred thousand dollars*, for the liberal endowment of a system of Industrial Universities, one in each State in the Union, to co-operate with each other, and with the Smithsonian Institution at Washington, for the more liberal and practical education of our industrial classes and their teachers; a liberal and varied education adapted to the manifold wants of a practical and enterprising people, and a provision for such educational facilities, being in manifest concurrence with the intimations of the popular will, it urgently demands the united efforts of our national strength.

Resolved, That the Governor is hereby authorized to forward a copy of the foregoing resolutions to our Senators and Representatives in Congress, and to the Executive and Legislature of each of our sister States, inviting them to co-operate with us in this meritorious enterprise.

JOHN REYNOLDS,
Speaker of the House of Representatives.
G. KOERNER, *Speaker of the Senate.*
Approved, Feb. 8, 1853. J. A. MATTESON.

A true copy: Attest,
ALEXANDER STARNE, *Secretary of State.*

And also to the following:

PETITION TO CONGRESS.

The ———, would respectfully petition your honorable body for a grant of Congress lands to each State in the Union, to endow therein an Industrial University, for the liberal and practical education of the industrial classes in the several pursuits and professions in life. Said grant to be no less in value than five hundred thousand dollars to each State, and to be held in trust for the above uses, accompanied by such conditions and restrictions in the terms of the grant, as shall, in the wisdom of Congress, be needful, in order to secure this trust forever to the uses aforesaid, and to prevent, as far as practicable, in all coming time, the possibilities of such trusts being diverted from their proper object, or made subservient to any local partisan or sectarian end, inconsistent with the appropriate use of such trust.

And we solicit your aid by the adoption of resolutions by your body to be submitted to Congress, soliciting their action with reference to this important subject.

In behalf of the industrial classes of our State, and also of education,

Respectfully, yours, W. F. M. ARNY.
BLOOMINGTON, Illinois, Jan. 1st, 1856.

Southdown Mutton.

SENDING mutton to England, is something like "sending coals to Newcastle," yet it has been lately done. The Baltic that sailed on the 17th of January, took out two fine Southdown Sheep, pure bred—born, brought up, killed and dressed at Locust Grove, near Rahway, New Jersey, as a gift from Geo. Hartshorne to his friend A. G. Robinson, Esq., of London. Mr. Hartshorne is a zealous sheep raiser, and is determined to convince our English cousins that the idea is not so ridiculous as they suppose, of attempting to compete with them even in sheep raising. We are afraid, however, notwithstanding his zeal, that the English taste will not relish American mutton; if it will, we can give them cheap meat.—[New York Tribune.

Mr. Hartshorne has recently purchased three fine Shorthorn Cows; they are in calf to the fine young bull Highflyer, who was got by Duke of Gloster, imported by L. G. Morris, of Mount Fordham. Mr. H. has Southdown and Cotswold sheep, Berkshire swine, and Shorthorn cattle, which he will be ready to ship, to order, for California.

The China Grass—Its History and Uses.

BY O. C. SCHAEFFER, M. D., U. S. PATENT OFFICE.

By the praiseworthy exertions of M. W. R. Smith, of the Public Conservatory, in Washington, there is now afforded an opportunity of ascertaining how far the China grass (*Bœhmeria nivea*) can be successfully cultivated in the United States. There seems to be no difficulty in multiplying the plants, and none in obtaining them in the condition in which they yield the fibre of commerce. This being the case, it is proper that some notice of the history of the plant, and its product, should be furnished for the information of those who may feel disposed to attempt its cultivation.

China grass-cloth has been known as an article of commerce for many years, but the plant furnishing the material was only identified about the commencement of this century, by Dr. Roxburgh, whose labors in bringing to notice the fibers of the East, are only now beginning to show their effect upon commerce. Another indefatigable laborer in the same field, Dr. J. Forbes Royle, has recently published a work containing a complete summary in the history of this and other Oriental fibers.

The *Bœhmeria nivea* (formerly known as Urtica nivea), belong to the nettle family, every subdivision of which abounds in fibrous plants. Dr. Roxburgh described it under the name of *Urtica tenacissima*, from specimens obtained in Sumatra, and, subsequently, he learned that this was the plant yielding the famous "China grass." More recently, the identity of the Chinese and Indian plants has been determined beyond dispute. From its wide diffusion throughout the East, this plant is known under various names, such as "Cha," or "Tchou Ma," in China; "Caloee," in Sumatra; "Ramee," in Malay; and "Ramee," in Assam. Gradually increasing in commercial importance, this product only obtained the notice of the public, generally, at the London exhibition of 1851, where it was presented, from the crude article to the woven fabric, showing fiber of such beauty and strength that three prize medals were awarded to different persons for specimens in the prepared state. Samples of these, now in the collection of the United States Patent Office, I have submitted to examination, the results of which will be given below.

Of the value of this fiber I can give no better evidence than the statement of Dr. Royle, that, as imported into England, it has "sold for £60 to £80, and even for £120 a ton." In some parts of India, the plant is only cultivated in small quantities, by the fishermen, for the manufacture of their nets, lines, &c. The use of the fiber, for cordage, is not likely to make its cultivation an object in this country; but the great strength, which especially fits it for this purpose, may be noted. Various samples, tried against the best Russian hemp, show that it bears a weight, sometimes nearly double, and always much more than that borne by the hemp. In China and elsewhere, it is mainly employed for making the grass-cloth, the softness and strength of which give it a character distinct from that of the fabric of any other fiber.

Generally, three crops are taken a year at intervals of about two months. The most rapid growth, in the second cutting, yields the finest fiber.

The treatment of the crop varies very much, but, in general, it closely resembes that of hemp, except that the fibers are peeled from the stalks by hand. They are next exposed to the dew, at night, and to the sun, by day, avoiding rain. In other cases, they are soaked in lime-water, or even boiled in a slightly alkaline solution. Sometimes, again, the fiber is spun, or even woven before it is bleached.

In short, the treatment is similar to that of other fibres which have to be stripped from a woody stem, the only variations in the process depending upon the relative hardness of the wood, which may be brittle or tough, and therefore easily or with more difficulty separated from the fiber. It is not improbable that the process of "breaking," used for hemp or flax, will also be applicable to this product.

The most successful treatment of the material, after it has reached Europe, consists in steeping it in water at a temperature of 90° F., for twenty-four hours, and then boiling it in an alkaline solution, after which it is well washed, in clear water, and nearly dried by high-pressure steam.

It may be noticed that the fiber of the plant which has grown wild, has also been sent to Europe; but this, as might be expected, is much coarser than the cultivated product.

The specimens of the crude material examined were those above named, obtained from the London Exhibition of 1851, and others kindly presented by Joseph Balestier, late Commissioner to Cochin-China, &c., which were also accompanied by the plant itself, obtained by him in Java.

The chief difference in the specimens is in the color, which, in the Java plant, is ligher, with a tendency towards green, and with somewhat more of a gloss.

The half-bleached and full-bleached line and tow, as received from London, were compared with the best specimens of English, French and Belgian flax, from the same exhibition, which last, as usual, were unbleached. A very slight examination at once shows the remarkable difference between the two materials. The filaments of the flax line, although very fine, showed the ends of the component cells, which, on repeated handling, separated from each other. The filaments of the China grass, on the other hand, although they had been subjected to the process of bleaching, showed no such loose ends; and, after long continued manipulation, still remained smooth, glossy, and, apparently, singly celled. To be certain upon this point, specimens, after boiling in an alkaline solution, of a strength which would insure the separation of the individual cells, were repeatedly passed back and forth, between the fingers, and then carefully examined, from end to end, under the microscope. Every effort was made at all doubtful points, by needles, to obtain a separation, if possible. As evidence of the care bestowed upon the examination, it may be stated that from one to two hours were more than once expended upon the scrutiny of a single fiber. The result of this close inspection was the development of the fact that the single cells of the line of the China grass are of an extraordinary length, often equal to, and sometimes far exceeding, that of the longest of which we have any record. Five, six and seven inches seem to be not unusual lengths. In one case, a filament of over ten inches in length was severely handled, without showing any signs of being composed of more than one cell; but, in this case, the microscope was not used. Even the tow of the bleached fiber furnished, in abundance, single cells, or fragments, three inches or more in length.

We are now prepared to understand the great strength of the "China-grass" cordage, as, in any given length, it has fewer breaks of uninterrupted continuity than any other fiber. The character of the single cells is as follows: In diameter, they exceed those of fine flax, of which, however, many are required to make a line of equal length. In cross section, they are irregular, and the greatest diameter is found, sometimes in one direction, and sometimes in another, somewhat after the manner of cotton. This gives them an advantage in spinning, furnishing a better hold of the fibers upon each other than if circular in section.

It is said that specimens of the Oriental fabric have been examined, in which the thread was untwisted, being made up of long filaments, joined end to end by some glue or cement. We know that this is true of the celebrated "pigna," or "pina," a fabric made from the pine-apple fibre, and the facts above named show that it may also be true of the China grass. This untwisted thread gives a peculiar transparency to the fabric, which cannot be imitated. No attempts have ever been made in Europe, nor in this country, to reproduce such an article, which probably requires too much manual labor to be profitable. The full-bleached line above mentioned is remarkably glossy and soft, and in some respects is not unlike silk in appearance. The whole character of the fiber is so distinct as to prevent any mistake as to the recognition of the article.

Although we have no mention of the employment of the tow, there can be no doubt of its applicability to the manufacture of an excellent fabric. The fiber, obtained by different cultivators, can be transmitted to the Patent Office for examination. In order to have a long, fine fiber, the crop should stand pretty close, and, when in small patches, it should be surrounded by other plants of similar hight, in order to have the whole yield of the same quality. Or, the exterior plants may be used for propagation, leaving only the tallest to be tried for their fiber.

In regard to the above, Mr. W. R. Smith, of the Public Conservatory, Washington, makes the following statement:

From a small paper of the seeds of the "Chinese Grass-linen plant" (*Bœhmeria nivea*), which I I obtained from the island of Jamaica, I propagated, under glass, about fifty plants, and subsequently removed them into the open air. From these, I hope to be able to continue to propagate others, by cuttings, during the next and succeeding summers, in sufficient numbers to meet future demands.

The seeds, which are small and require close attention, I sowed in March, in an eight-inch flower-pot, filled with equal parts of leaf-mould, common soil, and sand, covering them lightly with a sifted portion of the same soil. In order to keep them moist, I spread over the surface of the pot a regular layer of sphagnum, or bog-moss, which I removed as the plants came up. By these means, the seeds readily vegetated in a temperature of 55° F.

This product can also be multiplied, in the spring, by cuttings of the half-ripened shoots, planted in sand, regularly moistend, and shaded from the bright rays of the sun. Beneath the sand, which should be about two inches deep, there should be placed a layer of sphagnum, say an inch in thickness, to admit the roots freely, and afterwards facilitate the transplanting.

My impression is, that this plant will survive the winter in the open air, in any part of the United States, except the mountainous districts south of Pennsylvania; and it may possibly become naturalized in the extreme South. It will thrive in any ordinary soil.

Red Cedar as a Protection to Orchards.

As I have been a constant reader of your valuable journal for some time past, and have never attempted to assist you in your glorious enterprise, in any other way than by paying the poor, miserable pittance of one dollar per year for the privilege of reading it (which I am happy to have the opportunity of doing, instead of the original price of fifty cents), I wish to make one or two remarks that may be of interest to some.

With regard to plants for shelter, especially for orchard protection, I remember reading, in the April number, I believe, of the last volume, an article on this subject, speaking of the Red Cedar, as being an excellent shelter, etc., but expressing the opinion that it is generally considered a slow grower, and that it will not stand the knife. I must dissent from the statements of that article with regard to the above particulars. I contend that the Red Cedar is the best and cheapest tree for shelter that the farmers of Wisconsin can obtain. It is the faster grower of any evergeen I ever saw. The reason of its being considered a slow grower, is from the fact that it is generally found upon some barren side hill, where nothing else can grow; but when taken from that soil and put upon a good one, and well trimmed, from year to year, it grows with great rapidity.

Two years ago last spring, I got some of them and set them out for ornamental purposes. When taken up they were from four to five feet high, while now they are from thirteen to sixteen feet in highth, and the more I have cut and trimmed them, the better they have grown. This species of Cedar grows in abundance upon the banks of almost every river in the State.

The Cedars in my door yard have never had the ground stirred around them since they were transplanted. The writer of the article in the April number, has truthfully said that this Cedar would protect a plantation as effectually as a brick wall. The winter season is the time for the farmer to ascertain where the trees are to be found, and spring the time for transplanting. Farmers, all of you that have an orchard in an exposed situation, do not fail to shelter it. On our broad prairies, an orchard should by all means be protected from the wintry winds. —[C. L. in Wisconsin Farmer.

AGRICULTURAL SCIENCE—MANURING.—It has been taught by Professors of Agricultural Chemistry, and apparently on some reasonable grounds, that the very worst way to apply manure was to spread it out on the field and leave it exposed. It was argued that this exposure caused a loss of ammonia by evaporation, hence farmers were taught to plow their manures under as soon as applied to the soil, under penalty of losing a great part of their fertilizing properties. An essay on this subject by Dr. Voelcker, Professor of Chemistry in the Royal Agricultural College, at Cirencester, England, contains statements that will surprise our farmers. He asserts that no loss arises from spreading manure on the surface of a field; on the contrary, he asserts that if spread upon the field and allowed to lie until washed with rains, it is more beneficial than to plow it in at once. When spread out on a field fermentation is stopped, and volatile matter ceases to escape. In the case of clay soils, he remarks: "I have no hesitation to say that the manure may be spread even six months before it is plowed in, without losing any appreciable quantity of manuring matters." This is important information to our agriculturists, if correct.—[Scientific Amer.

Great National Trial of Machinery,

And Implements of every description. Pertaining to Agriculture, and Household Manufactures, at the Fifth Annual Fair of the United States Agricultural Society, to be held at Louisville, Ky., during the Fall of 1857.

THE Committee of the United States Agricultural Society, appointed at the fifth annual meeting, held at the Smithsonian Institution, in the city of Washington, on the 14th of January, 1857, "to designate the time and places and to make all the necessary arrangements for a *national trial in the field of agricultural implements and machinery*, respectfully invite the inventors and and manufacturers of all such articles, both in the United States and foreign countries, to participate in a public trial, to be made at Louisville, Kentucky, under the auspices of the society, durig the fall of 1857.

This new arrangement for the exhibition of agricultural implements and machinery of all kinds in actual operation, results from a conviction on the part of the Society, that no just awards can be made, except upon a practical working trial before competent judges; and the fullest opportunity will be afforded to test the comparative merits of the various machines that may be entered as competitors for the awards, both as regards land for field implements and steam power for stationary machinery.

A separate trial of reapers and mowers will be made at the appropriate season, special arrangements for which, as to time, place, &c., will be announced at an early date.

It is intended that this exhibition shall be on the most extensive scale, for the purpose of testing the working qualities of these important implements more thoroughly than has yet been done on any previous occasion, either in the United States or in Europe.

All articles from foreign countries, intended for exhibition may be consigned to the "Agent of the United States Agricultural Society, Louisville, Kentucky," by whom they will be received and stored free of charge.

This brief announcement of the proposed trial is made at this early date, to afford the most ample time for the preparation and transmission of machinery. A circular, containing full particulars as to regulations, premiums, &c., will be issued as soon as prepared by the Committee, and will be forwarded to persons who may apply to the Secretary, HENRY S. OLCOTT, American Institute, New York.

To enable the Society to make arrangements on a sufficiently liberal scale, it is requisite that the committee should know what articles will be offered for competition; and they therefore request those inventors and manufacturers, who may be disposed to unite in the proposed trial, to communicate their intentions to the Secretary, at their earliest convenience.

Committee of Implements and Machinery of the United States Agricultural Society.—Tench Tilghman, Oxford, Md., Chairman; John D. Lang, Vassalboro, Maine; J. T. Warder, Springfield, Ohio; G. E. Waring, Jr., American Institute, N. Y.; Henry S. Olcott, Westchester Farm School, N. Y., Secretary.

WASHINGTON Jan. 16, 1857.

Editors of journals of every description, who are desirous to promote the interests of agriculture, will confer a particular favor by an insertion of the above circular.

Stable Treatment of Horses.

IT is one thing to know how to use a horse, but it is another thing to know how to *take care* of him. A stabled horse needs special care and attention. His feeding must be regular as the measurement of the hours. When a change of feed is made, it must be done with great care—giving a small allowance at first until the stomach becomes used to the change. He must be cleaned every day; and when we say *cleaned*, we mean all that can be conveyed by that word. A good curry-comb, brush, and oiled woolen cloth are the utensils necessary. First take the curry-comb and begin at the top of the neck, back of the ears, working the hand both ways. Proceed in this way till you have gone over the entire body and legs. Then take both comb and brush, and follow the comb with the brush, and after every other stroke, draw the brush across the teeth of the comb to clean it. An experienced groom will do this instantaneously. This done, take your cloth and lay the coat, and remove the dust that adheres to the outside. The face and ears must also feel the brush.

Few men know how to clean a horse properly. If the above directions are followed daily, your horse will enjoy good health generally. Stabled horses must be exercised daily. This is absolutely essential to good health. If the feet of your horses are brittle and are liable to break and crack, they must be well oiled once a week. A horse thus treated will always be ready to go when wanted, and you will not be ashamed either to ride or drive him.

Another thing quite as important is a clean and well ventilated stable. We cannot excuse any farmer or horse owner who does not clean out his stables twice a day. A stable should be so constructed as to have a wide passage way or floor in front to feed from. Above the manger a space should be left a foot or two in width clear, and the passage way should be the avenue for the supply of fresh air to the nostrils of the horse.

A horse enjoys a good bed, and it should never be refused him. At night take your fork and make it up light, and you will feel amply rewarded for the humane treatment you have given your beast.—[Prairie Farmer.

PURCHASE OF BROOD MARES.—The Bardstown (Ky.) Gazette says, that R. A. Alexander, Esq., of Woodburn Farm, Woodford Co., Ky., has recently purchased the brood mares Motto, Sally Ann, Betty Lewis, and Kate Quin, for use at his extensive stables, where he has the stallions Scythian and Lexington. For the first three he paid $1,000 each, and for the last $500.

CAMPHOR A REMEDY FOR MICE.—Any one desirous of keeping seeds from the depredations of mice, can do so by mixing pieces of camphor gum in with the seeds. Camphor placed in drawers or trunks will prevent mice from doing them injury. The little animal objects to the odor and keeps a distance from it; he will seek food elsewhere.

TIME FOR PAINTING HOUSES.—Repeated experiments show that paint put on houses late in autumn or in winter, will last far longer than that put on in warm weather. In cold weather the oil dries on the clapboards, and with other ingredients forms a durable body, but in hot weather the boards absorb the oil, and what remains on the surface has but little substance.

CEDAR chests are best to keep flannels, for cloth moths are never found in them. Red cedar chips are good to keep in drawers, wardrobes, closets, trunks, etc., to keep out the moths.

California Emigration Societies.

WE have received the Circulars of the Pacific Emigration Aid Society, with their Preamble and By-laws, and these efforts on the part of our citizens to call immediate attention to this all-important subject demand of us a hearty co-operation. We therefore most cheerfully give place in our columns to them, and ask of every reader a careful perusal of these measures, which, we believe, if received with that attention they merit, will soon effect great good for our Pacific shores. It is to be hoped that every paper in our State will most cheerfully give them a place in their columns, and thus join in the great work of peopling our State with an Industrial population:

ADDRESS of the Pacific Immigrant Aid Association of California,

To the People of the State of California and of Oregon and Washington Territories.

FELLOW CITIZENS: Believing that the people of the Atlantic States and Europe, have but a limited knowledge of the resources and capabilities of our Pacific possessions and the advantages thereby afforded to immigrants, to permanently settle within its limits; and believing that the dissemination of statistical and other information relating to the commercial, agricultural, mineral and manufacturing wealth of California, Oregon and Washington Territories, their soils, climates, productions, rates of labor, prices of building materials, and all the necessaries of life;—also, the common schools and other educational privileges, the amount of arable land they contain, its location, adaptation, and the terms upon which the same can be obtained, and such facts and information as will tend to enlighten all classes of the Atlantic States and Europe;—believing that such knowledge will greatly encourage, aid and facilitate emigration to our shores, an effort has been made by the people of San Francisco, to organize a "Pacific Immigrant Aid Association," having for its object the promotion of the best interests of our Pacific State and Territories, by encouraging immigration as above set forth. And for the more effectual carrying out of the objects of the Association, they have elected the following Board of Directors:

President—JACOB R. SNYDER.
Vice President—JOHN SIME.
Treasurer—JULES DAVID.
Corresponding Secretary—J. H. PURKITT.
Recording Secretary—JOSEPH S. WALLIS.

Directors:

HON. OGDEN HOFFMAN, JOSHUA P. HAVEN,
G. TOUCHARD, H. M. WHITMORE,
JOHN H. SAUNDERS, HENRY HENTSCH,
J. SELIGMAN, D. C. M. HITCHCOCK,
SAMUEL J. HENSLEY, JULIUS BANDMANN.

It is probably well known to you that a similar Association has been organized in the city of New York, of which D. L. Ross is President; J. B. Bond, Vice President; J. W. Brigham, Treasurer; and E. C. Kemble, Secretary. It is to the efforts of that organization in connection with the labors of the citizens of California, that we are indebted for the passage of the Wagon Road Bill. But besides their labors in this direction they have also printed tracts and pamphlets, setting forth, in clear and forcible language, the inducements offered to the emigrant to make his home on the Pacific shores, and have scattered them broadcast over the Atlantic States and Europe. They are found on all the steamboats and railroads, in restaurants, hotels, and in all places where large bodies of men do congregate. They have expended a large amount of money, which has drawn heavily upon their private resources, and unless the people of the Pacific Coast come to their assistance, and manifest a disposition to co operate with them in their efforts to populate and build up the State and Territories, they will be compelled—so we are informed by letters recently received—to disband their organization and cease further efforts.

They have already done much to influence emigration in this direction. They are in the constant receipt of letters from persons in all parts of the Union, anxious to obtain information, and desiring to remove with their families to the Pacific. The emigation from the East to the West will be very large the present season, far surpassing that of any former year, estimated to be not less than one hundred thousand persons. Of this vast number not more than twenty thousand can be safely calculated upon as future citizens of California and the Territories north of us. It is therefore to be regretted that efforts were not made at an earlier day to organize Associations for the purpose of influencing this mighty tide of emigation to our broad and fertile acres. But there is a glorious future before us, if we actively and wisely improve the present.

But it is self-evident that the Association of San Francisco cannot alone do the work so imperatively demanded. It will do all it can; but it must rely on a cheerful, intelligent and hearty co-operation on the part of the country. Similar independent or auxiliary Associations must be formed in all the large towns and cities throughout the State and Territories. For it is not this city alone, but the whole Pacific slope, that is to be benefited by such Associations. Who doubts their propriety? Who that has a proper sense of his own interests, *can* do so? Who will doubt, or hesitate, or utter words of discouragement? Who will not, on the contrary, give his heart, his head, his hands, in encouragement to this great object? Let no party feelings, no sectional prejudices, sway your judgment, or control your actions. Let no boundaries of sea or land, of rock or river, of desert or mountain, interpose as a barrier to the consummation of those measures, which have for their result the highest and best development of the resources of your adopted home. The object under consideration is a good one, within the power of accomplishment, and called for by every consideration calculated to inspire and stimulate human action. Every producer, every manufacturer, every mechanic, every merchant, every laborer, every capitalist, and every owner of princely estates, has an interest in this movement. Surely this is one of the cases in which the interest of the whole is the interest of each. Every man has his dividend out of this augmented public advantage.

But *how* shall the object now before us be accomplished? We answer:

1. Let Associations be organized in every town and city. They can be independent, or auxiliary to the Immigrant Aid Association of San Francisco, as may be thought most desirable. But as "in union there is strength," so in concert of action, provided that action be cordial and harmonious, more will be done, and better done, than by isolated, independent organizations. Elect active, energetic men to the Directory; appoint a suitable Agent to canvass the town or city, and authorize him to obtain from every citizen the sum of one dollar and upwards, for the purpose of aiding the Committee in New York to publish tracts and pamphlets and to scatter them over the United States and Europe. Make it also the duty of the Agent to collect facts and statictics on all matters mentioned in the first paragraph of this Circular. And as it is desirable that these facts and statistics should all concentrate to some focal center, in order that they may be combined, systematically arranged, and made to tell with the greatest effect, let them be sent to the Corresponding Secretary of the Immigrant Aid Association of San Francisco. Again, we say—Organize! organize!

2. But if in any town or precinct it be impossible to organize an Association, then let some public-spirited citizen, having the confidence of the community, take upon himself the collection of funds, facts and statistics, and place himself at once in correspondence with the Association in San Francisco. In this way, individual effort may accomplish results as valuable as could an organized body of men. Action! prompt, vigorous, public-spirited action, is what the occasion and the object demand.

3. Let Landholders, who, beyond all others, are to be benefitted by a large and increasing population, give this matter their serious consideration and earnest co-operation. Let them communicate directly with this Association, state the amount, location, quality and adaptation of their land; whether confirmed or otherwise; the nature of their title; the amount they are willing to donate to permanent settlers, whether fifty acres, or one hundred acres, or a quarter section; the most reasonable rates at which they will sell per acre, and the easiest terms of payment, so as to make it an inducement for immigrants to purchase; whether they will be willing to enter into bonds with this Association for the faithful fulfillment of their contract, so as to encourage the settler and make him feel sure that he is secure in his possessions, and liable to no impositions; and give such other information as will tend to encourage, aid and facilitate emigration to our shores. If possible, execute a map of the lands to be donated or sold, and forward the same to the office in San Francisco. It will be the object of the Committee in New York, and of the Association in San Francisco, to direct immigrants to those localities, other things being equal, where the landholders offer the most liberal terms to the settler.

4. Let Agriculturists, east, west, north, and south, communicate the result of their experience and efforts in cultivating the soil, in rearing cattle, sheep, swine and horses, and furnish such other information as they, from their own experience, know that immigrants would desire to possess,

5. Let Clergymen and Teachers come to the aid of this Association. They can furnish valuable information, such as every honest yeoman desires to possess, before he consents to quit his old stamping ground, to seek a new home on the far-off shores of the Pacific, relating to churches and schools, the means of intellectual and moral culture for himself and children. We want to know the number of churches and schools, public and private, in every town and city the number of literary and philanthropic associations; the number of public libraries; the moral standard of the community; the regard paid to the social amenities of life, and to the sentiments of a civilized and christian people. These are matters of great importance, and any information in regard to them will not only be useful, but be appropriately acknowledged.

6. Let all County Assessors come to our aid. Let them, in the true spirit of patriotism, devote a few hours or days in compiling from their accumulated stores of statistical knowledge, a statement of the resources of each county, its topography and general features, its schools, churches and humanitary institutions, its amount of land for agriculture and pasturage, the amount and quality of government land, its number of sheep, horn cattle, mules, horses and swine, the names of its large landholders, whole amount of taxable property, canals or ditches, tunnels, quartz and other mines, number of inhabitants, amount of wheat and other vegetable productions per acre, together with all other statistical items which Assessors can so easily and readily supply. One County Assessor has already promised to furnish the information desired. Let all others emulate his patriotic course, and strive to make their statements as complete and reliable as possible.

7. Let the Press, everywhere, that glorious exponent of public freedom and enlightenment, lift up its voice, rouse the people to their duty, and call upon them, by the love they bear themselves, their wives and children, to do what they can to promote the prosperity of their adopted home—the advancement and glory of the Commonwealth. Though murders, assassinations and various crimes against the laws of God and man, have heretofore stained our annals, as they have the annals of every civilized people on the globe, yet by whom have these crimes been committed? By outlaws, such as are found all over the world. Who, in the majority of cases, have been the victims? Men of a dissipated course of life, who engendered their own destruction, and would have done so, had they been dwellers in any other clime or country. We believe California and its adjacent territories will compare favorably, on the score of morality and Christian observances, with any—even the most favored of our sister States. Human life is as secure here as in the best regulated government in the world. If the the contrary appears to be true, it is only an appearance, arising from the fact that all the crimes of a vast territory of country, extending over many degrees of latitude and longitude, are concentrated semi-monthly in one burning focus, and, as a consequence, are grossly exaggerated in the public mind. We reiterate our conviction that in no part of the world is the Christian Sabbath better observed, the sanctity of domestic life more honored, and intelligence, virtue and honorable dealing more respected, than in the Pacific State and Territories. Human nature here, however, is like human nature everywhere. It has its bright and beautiful side, and its dark and repulsive aspect. The good and the true are here as elsewhere found in fatal companionship with the evil and the false.

8. Let all who can influence human minds by the Pen, enter this field of use. Short, racy articles, filled with solid and reliable information on any of the above subjects, are earnestly solicited. Pamphlets heretofore published, setting forth the resources of this State and the Territories on the north, relating to their soil climate, agricultural, mechanical, mining, manufacturing and commercial interests, are respectfully solicited. Such sources of information will greatly facilitate the operations of the Committee.

9. And finally, let every patriotic citizen do

what he can to aid this great and good work. Let us show to the world that we have the sagacity to perceive what industry and energy and enterprise can do to supply that which nature has left to the co-operation of man. Heretofore—the same is also true now—the immense distance, the formidable difficulties to be overcome and the onerous expense of a pilgrimage to California, necessarily confined immigration to men of some pecuniary substance, as well as to men of more than ordinary physical endurance. But the tide of immigration has almost ceased. Unwonted efforts have been made, and are now making, in all the Western States, to influence and direct the tide of population pouring forth from the East and from Europe. Shall we be less mindful of our own interests, or less active in securing for ourselves and our posterity, the blessings that spring from a populous and well organized Commonwealth on the shores of the Pacific? We want to see, coming into our respective neighborhoods, a large immigration of hardy, honest, industrious and patriotic yeomanry,

"Bearing their birthrights proudly on their backs,
To make a hazard of new fortunes here."

The Association will shortly be prepared to furnish the most reliable information on all matters connected with mining, mechanical, manufacturing, agricultural and commercial operations, not only to immigrants just arriving, but also to many now among us, who, Micawber-like, are waiting for "something to turn up."

All communications or letters of inquiry, for the Pacific Immigration Aid Association of California, must be addressed to the Corresponding Secretary.

Signed on behalf of the Directors:

J. H. PUBKITT,
JOSHUA P. HAVEN,
JOHN H. SAUNDERS.

San Francisco, April 16, 1857.

(Please read and circulate.)

Preamble and By-Laws of the Pacific Immigrant Aid Association of California.

PREAMBLE.

WHEREAS, the people of the Atlantic States and Europe have but a limited knowledge of the resources and capabilities of our Pacific possessions and the advantages thereby afforded to Immigrants to permanently settle within its limits: and whereas, the dissemination of statistical and other information relating to the commercial, agricultural, mineral and manufacturing wealth of California, Oregon and Washington Territories, their soils, climates, productions, rates of labor, prices of building materials, and all the necessaries of life—also the common school and other educational privileges, the amount of arable land they contain, its location, adaptation, and the terms upon which the same can be obtained, and such other facts and information as would tend to enlighten,—not only all classes of the Atlantic States and Europe, but also of our own State,—would greatly encourage, aid and facilitate immigration to our shores. Therefore we, whose names are hereunto affixed, do agree to form ourselves into an Association to be called the "Pacific Immigrant Aid Association of California," to be located at San Francisco, having for its object the promotion of the best interests of our Pacific States and Territories, by encouraging immigration as hereinbefore set forth: and for the good order and government of the same, as well as the promotion of harmony and friendship among the members thereof, do assent to and adopt the following:

BY-LAWS.

ARTICLE I.

There shall be a Board of Directors consisting of fifteen members, who shall be elected by the Association, at the Annual Meeting to be held on the first day of April of each year, who shall hold office for one year, and who shall have full power to carry out the objects of the Association.

ARTICLE II.

At all meetings of the Board a quorum for the transaction of business shall consist of nine members.

ARTICLE III.

The officers of the Association shall consist of a President, Vice President, Recording Secretary, Corresponding Secretary, and Treasurer, who shall be elected by ballot by the Board of Directors from their own number, and who shall hold office for one year.

ARTICLE IV.

The President shall preside at all meetings of the Association and Board of Directors—shall call a Special Meeting of the Board when requested so to do by three members thereof, and a Special Meeting of the Association when requested so to do by ten members thereof—shall countersign all audited bills for the payment of moneys, and perform such other duties as may be hereinafter set forth.

ARTICLE V.

The Vice President shall discharge all the duties of the President, in case of his absence or inability to act.

ARTICLE VI.

The Recording Secretary shall keep full and correct minutes of all proceedings of the Association and Board of Directors, to be produced at each meeting and subject at all times to the inspection of the members.

ARTICLE VII.

The Corresponding Secretary shall perform all the correspondence of the Association in its intercourse with other associated bodies or individuals, and keep a duplicate of all important letters, in a book provided for that purpose. The Board of Directors shall be empowered to fix his salary, whenever the amount of business to be transacted by the Secretary shall render it necessary to do so.

ARTICLE VIII.

The Treasurer shall receive all moneys belonging to the Association, make all payments of audited accounts on an order drawn by the Recording Secretary and countersigned by the President. He shall render an account to the Board of Directors, at each stated meeting, of all moneys received and payments made, and at the Annual Meeting of the Association shall make a full exhibit of the same. He shall give bonds for the safe keeping of the moneys of the Association, whenever required to do so by the Board of Directors.

ARTICLE IX.

There shall be an Auditing Committee of three, to be chosen by the Board of Directors from their own number, who shall audit all accounts.

ARTICLE X.

There shall be an Agent or Agents appointed by the Board of Directors, whose duty it shall be to prepare all matter for publication and circulation, and who shall perform such other duties as the Board may impose. He or they shall receive such compensation as the Board may determine on.

ARTICLE XI.

The Board of Directors shall not contract any debt or liability to exceed the amount of unappropriated moneys in the Treasury at the time such debt or liability shall be contracted.

ARTICLE XII.

Any person may become a member of the Association, by paying an initiation fee of not less than one dollar and the sum of one dollar each and every month, payable quarterly in advance, and by signing the By-Laws of the Association.

ARTICLE XIII.

The Regular Meetings of the Association shall be held semi-annually, on the first day of April and of October of each year. The Regular Meeting of the Board of Directors shall be held on the first and fifteenth days of each and every month, excepting when such days shall fall on Sunday, then in such case the meeting shall be held on the following day.

ARTICLE XIV.

In the absence or inability to act of both the President and Vice-President, a president *pro tem.* may be appointed by the Board of Directors, who shall have the same power as the President, during such absence or inability. The Board of Directors shall have power to fill any vacancies that may occur in their own body during the period for which they are elected. At all meetings of the Association a quorum shall consist of twenty members.

ARTICLE XV.

The By-Laws may be altered or amended by a two-third vote of all the members at any Regular Meeting of the Association, or at a Special Meeting called for that purpose.

SALE OF FINE STOCK.—Mr. S. P. Chapman, Mt. Pleasant Farm, Clockville, Madison county, N. Y., has recently made several sales of fine animals. The first we notice is a lot of *Berkshires*, two sows and a boar, to W. W. Franklin and R. G. Dun, of Wahoo, Madison county, Ohio. These were excellent specimens of the breed, and the sows were in the two lots that won the first and second prizes at the Fair of the N. Y. State Ag. Society in 1855. Mr. C. has sold his celebrated prize bull "Halton" to W. B. Roberts, Norristown, Penn. Halton won the first prize at the show of the N. Y. State Ag. Society, at Rochester, in 1851, and first prize at the Madison County Fair same year—the first prize at the State Show held at Utica, in 1852, and the Diploma at the State Show held at Elmira, in 1855. Mr. C. K. Ward, of Le Roy, Genessee county, N. Y., has lately purchased of Mr. C. a two-year-old heifer, "Fanny" (in calf to Halton), and a yearling heifer, "Bright Eyes 5th" (in calf to Duke of Oxford). Bright Eyes 5th was sired by Halton, out of the imported Bright Eyes 3d, by Early Derby, &c. She was considered by Mr. Chapman as one of his best animals, and we learn a very high price was paid for her.

In addition to the above, Mr. Chapman has just sent out to John C. Groom, Circleville, Ohio, a trio of Brahma fowls (which were winners of the first prize at the State Poultry Show held at Utica), and also a pair of Pheasant-colored Chittagongs. [We presume the Pheasant-colored Chittagong is the same fowl known in England, and mentioned in the recent edition of Bement's "American Poulterer's Companion," as the "Partridge-colored Shanghai."] Some two years since Mr. C. *experimented* (and somewhat expensively) with sixteen different kinds of *pure bred fowls*, out of which he has selected the above as the two best breeds.—[Rural New Yorker.

THE USE OF THE EYES.—The proper adjustment of the light is very important to the close reader and student. Alternations of light and darkness distress weak eyes, and debilitate those which are sound. The sudden transition from dark to light rooms, the degree of light in the study room, the manner in which the light falls upon the page, are all important considerations, though apparently trifling in themselves. Too little light debilitates the eye and compels overaction, while too much dazzles and confuses, and causes a morbid sensibility of the organ. The student should not, after sitting in the dark to meditate, suddenly commence his studies. There should be sufficient light to see easily. The light should be equally distributed, and not reflected or concentrated. The practice of wearing green shades is bad, unless there is a deficiency in the prominency of the eye or a peculiar weakness of the sight. Reading or writing by twilight or moonlight, and looking at lightning, are attended with danger to the sight. Sitting in front of a window, with a book on the knees, sitting with the back directly to any open window, and permitting strong light to fall immediately upon the paper, holding a candle between the eye and the book, are all practices likely to debilitate the sight. The light should fall obliquely from above, over the left shoulder.—[Scientific Amer.

WHAT DID THE CLOCK SAY?—The clock upon the tower of a neighboring church tolled forth slowly, and solemnly, the knell of the departed hour.

As the last sound died away, Willie, who was sitting on the carpet at his mother's feet, lifted his head, and looking earnestly in her face, asked,

"Mother! what did the clock say?"

"To me," said his mother, sadly, "it seemed to say, gone—gone—gone—gone—gone!"

"What, mother? what has gone?"

"Another hour, my son."

"What is an hour, mother?"

"A white-winged messenger from our Father in Heaven, sent by him to inquire of you—of me, what we are doing; what we are saying; what we are thinking and feeling."

"Where is it gone, mother?"

"Back to him who sent it, bearing on its wings that were so pure and white when it came, a record of all our thoughts, words, and deeds, when it was with us."

Were they all such as our Father could receive with a smile of approbation?

Reader! what record are the hours, as they come and go, bearing up on high for you?

THE IRON STRUCTURE FOR GOVERNMENT. A building of cast iron, for the purpose of a Marine Hospital, has been ordered by Government to be built at New Orleans. The building is to be perfectly fire-proof throughout. It is well remarked that this judicious encouragement given the enterprise by the Secretary of the Treasury, will initiate the use of iron into the public architecture of the country.

THE EFFECT OF CIRCUMSTANCE.—I have often thought that the worst and wildest of men, under proper influences, might have been the most virtuous and delightful. The same wind which uproots the tree and desolates the harvest, when softened into the breath of summer, and lingering among the trembling strings of the Eolian harp, steals across the senses in the most ravishing melody.

"Do you understand me now?" thundered a country pedagogue to an urchin at whose head he threw an inkstand. "I've got an *inkling* of what you mean," replied the boy.

What is Home without a Father?

WHAT is home without a father? Sad, dreary, and cheerless. I have sang in days gone by, days when I was merry and light-hearted, "What is home without a mother?" but I did not realize its meaning. But I have realized, from the very depths of my soul, that home without a father, is lonely, gloomy, and mournful beyond description. Two weeks from day to day he sat by the fire, and we were all happy then. But now he "sleeps the sleep that knows no waking." "At twilight's soft and pensive hour" we gather around the old stone hearth, and listen to the crackle of the glaring fire, but it has ceased to be cheerful. No sound is heard but the wailings of our mourning mother, or the prattle of our sweet little sister, asking in childish accents if papa has gone to live with God. The family circle is broken, and our dear father has been borne to that land from which no traveler returns. Now that he is gone, how every little kind act, every approving smile and every word of kindness is remembered with fondness. We remember, too, how happy his laugh used to ring out, as seated around the supper table he would relate some amusing anecdote. But it pleased our Father who art in Heaven, to release his spirit from its house of clay, and take it to its eternal home. The last enemy, which is Death, came with his scythe in his hand, and heart-rending was the struggle between them. But Death was the strongest, and in a few short hours, those sparkling eyes, that ever looked on us with delight, were closed forever and aye;—those hands which had ever clasped our own with such warmth and affection, were cold and stiff, and that heart that had loved us so fondly from earliest infancy, was pulseless and stifled in death. We buried him near our own Forest Home. As I stood by the grave, and heard the frozen clods on his coffin, I thought, what sorrow can be greater than this? Now he sleeps on the cold hill top, where the January wind howls and shrieks among the branches of the stately oak that stands near by, as if to protect that sacred spot from the wild freaks of the too rough Winter's blast. Home is home be it ever so homely. But oh! how sad to know we have a home without a father?—[H. in Prairie Far.

FOREST HOME, Lawrence county, Ill.

A French Marriage of Prudence.

THE Paris *Siecle* contains the following: On the 29th of December last a town in the north of France was quite *en fete* on account of the marriage of Mdlle. Eugenie D———, the only daughter of a manufacturer of the neighborhood, with Mr. Charles V——, the son of the wealthy merchant of Paris. The marriage was one of prudence and arrangement rather than of love. All the questions of interest had been carefully attended to, but the point of mutual inclination was totally neglected. Every one seemed gay and happy, except the bride. However, the ceremony took place, and a wedding banquet followed, the whole being terminated by a splendid ball. The festivities were drawing to a close, when a servant informed the bridegroom that a gentleman desired to speak with him on a very urgent affair. The bridegroom went out, but did not return for the rest of the evening. The guests, one by one, retired, but the husband still remained absent, and at last, long after midnight, the bride withdrew to her chamber. There she at once discovered the cause of her husband's absence, for on the table by the bedside she found a small parcel and the following note from her husband:

"Madame: If I had no right, in marrying you, to expect a sincere affection, since we were but little acquainted with each other, I, however, looked for a heart which had never throbbed for another, and which I might by assiduity and tenderness in the end make my own. But a long series of letters from you to another man have just been placed in my hand—letters which prove, that if you gave me your hand, your affection has been given to another. I cannot, Madame, accept such an arrangement, and, as I am unable to rend asunder the bonds which have joined us a few hours since, I am determined to protest, at least by my absence, against the union which I have contracted; and the first day of your marriage shall be the first also of a widowhood which shall only terminate by the death of one of us. Adieu, Madame, forever!"

The next morning the house of the rich manufacturer was plunged into consternation, for the bride was found dead in her room from the fumes of lighted charcoal. On the table lay the parcel of letters transmitted by her husband, and near them the following note:

"Monsieur: It is I who am in the wrong and it is I, therefore, who ought to offer a reparation. I give you the only one that is in my power: I restore to you your liberty, and I expire imploring your pardon."

A FAST PEOPLE.—From one of our Eastern exchanges we clip the annexed series of truths, that should lead wise men to thinking, and to ask if we are not a fast people?

"In no other country in the world are ships so uniformly sent to sea without buckets enough to put out a fire, or boats enough to save the passengers. In no other country are captains held guiltless who crowd all sail in the darkness without a light at the mast head. In no other country do trains thunder over cross roads at midnight, thirty miles an hour, without a watchman on the line. In no other country are steamboats run with weights on the safety valve to keep it down, and tar on the fire to keep it up. In no other country do fire bells ring a dozen times in a night. In no other country do hundreds of women yearly murder themselves and their children with death dealing lamps of alcohol and turpentine. In no other country do new brick houses tumble down of their own accord. English steamers are more smoky than ours, but they are also more strong. French railways have fewer cushions, but they have more watchmen. German ships are slower sailers, but they are built so as to last to the end of the voyage; and Dutch houses, though seldom gay or gaudy, are often two to three hundred years old. There is no need of imitating their faults, but we might their virtues. We are perpetually copying transatlantic extravagance in our fashions and finery, why not copy a little transatlantic prudence in our travel and trade."

TO-MORROW.

To human hearts what bolder thought can rise,
Than man's presumption on to-morrow's dawn?
Where is to-morrow?—In another world.

Oh, beware of Jealousy;
It is the green-eyed monster which doth mock
The meat it feeds on. (Shakespeare.

NOTHING, says a Latin author, is more wanting to render a man miserable than that he should fancy he is so.

HOTELS, &c.

Estudillo House,
SAN LEANDRO, Alameda County.

THE subscribers respectfully inform their friends and the public that they have purchased the interest of the former proprietors in this popular and well-known establishment, and trust, by strict application to business and attention to the comforts of their patrons, to merit a share of public patronage. It is their intention, as soon as practicable, to make great improvements on the premises, and their patrons may rest assured that none but the choicest of Liquors will ever be found at their house. The table will be supplied with the best the market affords, and the rooms are furnished in a manner not to be surpassed by any hotel in the State.

To those of our friends who may not be "posted," we beg leave to say, that our house is located at the county seat of Alameda county, six miles from San Antonio, to which place the Contra Costa boat makes three trips a day. Stages leave San Antonio immediately on the arrival of the boat, and return in season to meet her on her return trips.

San Leandro is situated on the main road to San Jose, in the center of the finest farming district of country in this State. The easy access from the city to this delightful village, renders it a very desirable place of resort for gentlemen with their families who may wish to retire for a season from the bustle of city life. The house is admirably adapted for the accommodation of families, and particular attention will be paid to those who may honor us with a visit.

The long experience of Mr. Biggs, formerly one of the well-known firm of Biggs & Kibbe, is sufficient assurance that the public will always be able to find, at this house, the choicest articles that the market affords.

PROSPECTUS OF VOLUME VII. OF THE CALIFORNIA FARMER.

THE CALIFORNIA FARMER was established in January, 1854; its success was a problem that the future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the virgin soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer FARMER expected to meet with obstructions, trials and difficulties, that would try our strength and temper too. But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he must meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—so our humble selves in the enterprise of the journal we then presented, we had faith—we were willing and ready to labor and toil—to do and to suffer—confident that ere long the goodness of the cause we had espoused, its happy and beneficial influences, with dignity, nobility, and prosperity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good—to them we and our cause are known—our desert at their hands is manifest.

To those who are strangers to us and the journal we publish, we again present the CALIFORNIA FARMER.

Our journal is devoted to Agriculture and all the useful sciences—it will ever be our aim to have the Farmer the true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the TRUE friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Homes of our glorious State. Free from every political, sectarian, or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that our means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication, we have access to facilities for information rarely obtained.

In the department of Education, of Home Influences, we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artisans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall esteem most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it in comparison, and abide the issue.

With grateful acknowledgments for a generous sustaining in years of trial, and with the assurance to our patrons of many improvements in the opening year, we ask their continued favor and generous influence for this journal.

The terms of the FARMER are, for the year (always in advance), $5.

Offices of Publication—130 Washington street, San Francisco, and State Society's Rooms, Fourth street, Sacramento. WARREN & CO., Editors and Publishers.

January, 1857. 4t.

The California Farmer.

SAN FRANCISCO, FRIDAY, APRIL 24, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

OUR TRIP UP THE SACRAMENTO AND FEATHER RIVERS.—The important matters of the Emigration Society, the preparation for May-day, and the letters of Agricola, which were delayed in previous mails, so crowd our columns that we are obliged to defer the account of our very pleasant and interesting trip which occupied a good portion of our last two weeks; but we shall prepare it in full for our steamer edition, and we shall not forget any of those kind and generous friends that made our travels and duties so very pleasant, by the kind courtesies we received at their hands. Marysville, Oroville, Bidwell's splendid Ranch, Garrett's Sawmill at Oroville, Thompson's Flat and gold washing, Smith & Sparks' gold mine, Water Works, Table Mountain, the Cave and Water-falls, Coal Company's Works, mining at Oroville generally, and much of great interest, we shall present. These sketches, with May-day Festivals, and promised original copy with letters already on hand, will enable us to prepare the best number of our journal yet issued, and one worthy being sent to friends at the East. As our edition will be increased, those friends that have bespoken for advertising room, are reminded to hand in their business by Wednesday next.

The First Sheep-shearing Festival on the Pacific Coast.

LET the valleys shout to the mountains, and the mountains echo back the glad shout, that California shall mark the Festal day of May by so glorious a work for the industry and permanency and the prosperity of our State, as the jubilee named above. To the unreflecting and the careless, those who feel not an interest in this land of Gold and of Flowers—to the selfish, the bigoted and the ignorant, these words may seem as the words of an enthusiast, and so they may pass; but let the work but begin that is now announced, and be carried forward with that energy and fidelity it so well deserves, and the voice of human industry shall awake a song that shall indeed echo from mountain to mountain, and there shall break forth an enthusiasm that shall make the hearts of ten thousand workingmen glad that now look forward with fearful forebodings for the future.

In announcing the Festival which we do now, we do so with full authority of the energetic owners of the fine flock of Merino Sheep, numbering near two hundred, which are "to be fleeced," for the sport and pleasure of, we hope, thousands of those who feel a deep interest in the rise and progress of California.

Messrs. Whitney & Co., the pioneer importers of a flock of valuable Sheep, have expended a large sum to introduce and sustain an interest that ere long will prove one of the mightiest sources of revenue to our State, and give employment to thousands and tens of thousands of our working classes. Messrs. W. & Co. authorize us to say that the Sheep Shearing named above, will take place on *Friday, May 1st*, at Elk Grove, a beautiful spot about a dozen miles from the city of Sacramento; one of the most pleasant retreats around that city, and over a smooth road and through an almost continuous flower garden of Nature's handiwork.

No cost or pains will be spared to make this Festival one of the most interesting ever yet got up on the Pacific shores. Messrs. Whitney & Co. also authorize us to say, that they would be most happy to have the children of the Public Schools, and all children, appear on the grounds; they would be happy to have the aid and co-operation of all citizens to make it a scene of rural happiness.

A "May Pole" will be erected, a "May Queen" chosen—music and dancing upon the green, and such sports and pleasures introduced as shall be in strict accordance with the Festival of May, and the crowning of the Season of Spring-time. All rude or wild sports, and objectionable objects, will be excluded from the grounds; and the proprietors feel that they will have the hearty co-operation of the citizens of the Levee City, and also citizens from many other cities and portions of the State. Messrs. W. & Co. tender their large and handsome furniture wagons to the use of schools, for children, and they will do all in their power to promote the general interest of the occasion.

Many citizens of various portions of the State interested in these matters, and many families of San Francisco having already expressed a desire and determination to be present, we are authorized in saying that it can be anticipated as one of the brightest and happiest Festivals yet announced.

It is to be hoped our citizens generally will not lose this opportunity of showing their interest in what is doing to build up our State. And all who are directly interested in stock raising, especially this branch of it, should by all means be present.

We would call attention to a communication in another column of the present issue, from Sigma, and we do hope the Public Schools of Sacramento will join the gathering on this occasion, as instruction in rural duties and pleasures is surely the mental food appropriate for the minds of the youth of our land.

We earnestly invite, therefore, in the name of Messrs. Whitney & Co., all Teachers and Pupils to be present; all Parents that can attend, and all who love *rural scenes*—all who desire to participate in those pleasures that must always make the heart better and happier.

EARLY FRUITS.—Rich and luscious Strawberries are now pouring into the market of San Francisco, from the several gardens across the Bay, and from the Mission. Although the fruit is not yet as sweet as could be desired, yet it is large, and gives promise of great abundance.

Suggestions for May-day.

WITH more than ordinary pleasure we present our readers with the gratifying suggestions of our correspondent "Sigma." We cheerfully respond to the call for the celebration of a day which should ever be kept associated with all that is innocent and lovely in character, as well as beautiful in nature.

The return of spring, the opening of flowers, the breath of summer, the sports of childhood—all come to our remembrance at the sound of "May-day." Who among Californians do not remember their early Homes, and May-day; and these memories come to us always, as "pleasant memories," they are linked only with happy youth, happy hours, innocent recreations. May-day in California should ever be a Festal-day. It should be hailed by all classes as one of the brightest and most joyous of months. As youth is the morning of life, so spring-time is the morning of the year, and we should welcome it as one would welcome the messenger that comes to renew our life, our blessings and our happiness.

May-day is Flora's birthday; 'tis then she comes to hold a court among the Beautiful, Good, and True, and like the Innocent Flowers, over which she reigns, she calls upon the innocence of youth to come to her as guests, and bids them choose their "Queen." How many thousands and tens of thousands of hearts have throbbed in dreams of the coming May-day scenes, and how many sweet voices have sung—

"O, wake and call me early, Mother!
For I'm to be Queen of May."

We pity those who do not love Flowers, and hard must be that heart that does not beat quicker at the sight of groups of happy children with wreath-crowned brows and baskets of sweet flowers, singing their sweet song, or dancing upon the earth's rich carpet.

If he that hath no *music* in his soul, "is fit for treason, stratagem and spoils," we believe those who do not love *Flowers* "prefer darkness, rather than light," and are fit for murder, rapine, and robbery—we mean those who never give a thought to these beautiful tokens of God's goodness in sending us these bright tokens that the pure and good love to associate with all the most tender scenes of life. Flowers are the brightest emblems of love and affection when the marriage vows are consecrated; they are the language of love in every form and in all the relations of life, and are the last evidences of our devotion to the dead. We strew them upon the coffin and upon the grave, believing that the departed, like the Flowers that spring to life anew each season, will also spring again to life in a brighter and better world.

With earnest wishes, then, that the excellent suggestions of our amiable correspondent "Sigma" may have the effect of arousing an immediate and active interest in Sacramento, and in all other cities, for the celebration of May-day, and at her request that we would suggest some plan for the observance of the day, we take the liberty of suggesting that the Public Schools take the lead in this beautiful amusement. Let parents, brothers, sisters, and friends of youth aid them, gather by hundreds and by thousands, raise the "May-pole," choose the "May-Queen," make the day a happy day, a joyous day, and let the warm gush of love and gratitude ascend to the Giver of all Good, for the return of this "morning of the year."

We hope these suggestions will be received with the same earnest feeling for human happiness that prompts us to offer them. When children are taught to love Flowers and the Flowers are made instructive to them, every home in our land will become a garden-spot without, and love and affection will dwell within; for where there is a true love of flowers, vice cannot long find a habitation. Flowers are instructive, and should surround every dwelling in our land. How truthfully Longfellow speaks:

"In the cottage of the rudest peasant,
In ancestral homes, whose crumbling towers
Speaking of the Past, unto the Present,
Tell us of the ancient games of Flowers;

"In all places, then, and in all seasons,
Flowers expand their light and soul-like wings,
Teaching us, by most persuasive reasons,
How akin they are to human things.

"And with child-like, credulous affection,
We behold the tender buds expand;
Emblems of our own great resurrection,
Emblems of the bright and better land."

We need say no more. If the beauty of the season, if the interest and happiness of children are not themselves sufficiently strong to awaken a due attention and interest, then our feeble pen will not avail. But after the call of "Sigma" upon us, we could not fail to respond with our best wishes for a happy May-day to our friends at Sacramento and in all other places.

We rejoice to know that Marysville, Oroville, and several other places, are alive to this subject, and we hope to herald many a happy gathering.

We hope whenever these gatherings occur, parents, teachers, and all, will go prepared to speak to the youth and make lasting impressions of good by teaching them the value of a knowledge of the Natural Sciences, a better knowledge of the vegetable world, with all its wondrous beauty.

TO OUR READERS—MAY-DAY FESTIVALS. The May-Day Festivals approaching, we hope that those who participate in them will do us the favor to give us sketches of them in the several portions of the State. We shall be most happy to receive sketches of School Jubilees, and sketches of everything connected with this joyous season; and in order to make our next number particularly interesting, as we shall feel it our duty to be a participator in such scenes, we know our readers will indulge us if we are later a day or two in our next issue.

WAGON ROAD.—A Wagon Road Convention is to be held at Marysville, on the 4th of May next.

A Profitable Error.

WE subjoin a most gratifying letter which we have drawn out of a friend by an error of our own, unintentionally made, and we know in advance that all persons aggrieved in any way whatever by *our* error, will cheerfully pardon, after the pleasure they will receive in perusing the letter of our friend and former brother editor. But we were not wrong after all. We said our farmer brother was *formerly* an expressman. Surely he both carried and sent valuable *express favors* to the Press; and he is now an ex-Press man by his own showing, and we can prove *we* this week received a very valuable express *favor* a letter from him which is *expressly* adapted to the time and circumstances and wants of Alameda county. We believe, too, that the citizens will all esteem it an *express favor* if our friend Fargo will go to work *expressly* to form, what is so much needed and will do so much good, a County Agricultural Society for Alameda County; there never was a more propitious time than the present, and let it be *expressly* understood that a meeting be called the *evening* before May-day, at the *Estudillo House, San Leandro*, or such place as shall seem best, then then take *express* measures to organize a County Society, and before the meeting adjourns, resolve that all that can, will attend the

GREAT SHEEP-SHEARING FESTIVAL

on May-day, at Sacramento, and thus gather much information that will be valuable, and enjoy much pleasure that will afford lasting satisfaction. Now this will be acting *expressly* to the purpose, and we hope we shall never make worse editorial blunders than the one that has called so happily our friend, even from his happy home. We rejoice to have such a powerful advocate for Rural Life, and we most cheerfully open our columns to any and all subjects that shall tend to advance the cause of Agriculture and Rural Happiness, and we trust we shall often be favored by the happy thoughts of one who can do us an express favor by so doing:

ALAMEDA County, April 20, 1857.

EDITORS FARMER: In your issue of last week, you devote a column to the favorable mention of the farming interests in Alameda county, in which you refer to the names of several persons engaged in agricultural pursuits in this vicinity, among whom I find my own associated.

You are right in classing me as a farmer, but you are in error in relation to my former occupation. In saying that I was formerly engaged in the Express business, injustice may be done other parties of a like name. Had you stated that I was an *ex-Press-man*, or heretofore connected with the *Press* of San Francisco, you would have been spared the trouble this note of correction gives you.

Yes Colonel, from the pen have I turned to the plow, and exchanged the narrow and confining editorial-room for the broad and beautiful fields. From the dingy walls and nauseous atmosphere of the crowded city I have sought a home in the balmy air and bright verdure of the country whence you so earnestly advised people to hie away to, in last week's FARMER.

The change I assure you is one that can only be appreciated by those who have made similar ones. The advantages of profit and pleasure are too numerous to enumerate in one short letter. I can only say to my city friends, try it for yourselves.

As I have but a limited acquaintance with the farmers of this county, may I not ask you to urge upon them through your paper—which is generally read by them, I believe—the importance of forming a County Agricultural Society, similar to those established in other States, and in some counties in our own State. There may have been something done about such an organization in Alameda—if so, I am not aware of it. I trust you will allude to the matter editorially, and throw your columns open to those who may wish to discuss the matter.

We have the elements in this county to form one of the most extensive Societies in the State, and such an Association would tend to the advancement of the county and State.

To such an object I would most cheerfully devote whatever of time and service might be required to perfect an organization, and I hope to hear from some of the farmers of this county, through the FARMER. I am, &c.,

FRANK F. FARGO.

CALIFORNIA PRINTING PAPER.—We again call attention to our journal, which is printed on California paper. Although at an extra cost to us weekly, we most cheerfully adopt it, feeling it our duty to sustain, by all means in our power, the products of California labor. By direct information we have received, we learn that the mill now turns out 6,000 pounds of paper, per week, of large size, and measures are in progress to increase the manufacture as fast as material can be had, from which good paper can be made. Eighteen workmen are employed; and the best prices will be paid for rags at the office of the manufacturers.

We ask our patrons to note our journal and give us their influence to extend its circulation and usefulness in their vicinity, and thus give us the means to accomplish more in the work in which we are engaged.

RIPE CHERRIES.—We noticed a little parcel of bright and beautiful Cherries, fully ripe, exhibited at the Washington Market, San Francisco, raised at Oakland. We anticipate the greatest fruit show the present year, that has ever been seen upon that "round ball of earth" we live on. These Cherries *looked* good—we could have judged better if they had been sent for us to prove. However, we thought they were *some*—only two bits a piece.

The Sheep-shearing Festival.

IN addition to the interest evinced and the plans already in progress, we are happy to announce that several of the most distinguished friends of Home Industry, those citizens who are identified with our country's prosperity, will be present and participate in the festivities of the occasion. Among those who will be present we are at liberty to name Col. J. B. Crockett, one of those citizens who has so often labored in the cause of Agriculture and kindred interests; he will join the festive scene, and will be ready to entertain and instruct by his eloquence; and others of our public citizens will also join. We are happy also to say that A. P. Smith, Esq., of Smith's Gardens, will render essential service by assisting in the decorations from his grounds, and join with his teams and wagons, to assist in the conveyance of children as far as he is able. It is also to be hoped that the Stage and Omnibus Companies, with their accustomed liberality, will volunteer for the Schools, and strive to make the Festival a most happy one.

May is a most happy period to visit Sacramento, and those who have not yet visited the "Levee City," should not fail to do so on this occasion. It is to be hoped that the citizens will generally give their influence and interest to so auspicious an event, and thus manifest their interest for the schools, for children, and the country. To all who desire to unite on this occasion, in the festivities, we are authorized to refer them to the proprietors of the Sheep, the Messrs. Whitney, corner of Fourth and K streets, Sacramento, who will be happy to render any information in regard to the Festival.

GREAT STOCK SALE IN NEW YORK.—We would call the attention of all who desire to secure the very best of Blood stock, to the great sale which is to take place in June next, at Thornedale, N. Y., under the direction of Mr. Samuel Thorne, of that place. This stock was very carefully selected in Europe, and raised from it by the late N. J. Becar, Esq., of New York, and is now to be sold without reserve by the Executors. As this is an opportunity that seldom occurs, we hope California will secure her portion of it, for we believe no better investment could be made than in the purchase of stock of this character. Purchasers of stock can make a pleasant visit now and attend the sale, or can secure the services of an agent to act for them. By a reference to our advertising columns, the particulars of this sale can be had. This sale, which was advertised to take place in June, will be greatly enlarged, as we notice by a card in the Journal of the New York State Agricultural Society, that Mr. Thorne has purchased the great stock of Messrs. L. G. Morris and Becar, thus making the best Blood Stock in the world. See card from Journal:

Great Sale of Shorthorn Cattle.—Mr Samuel Thorne, of Thornedale, has bought the entire Herds of Col. Lewis G. Morris and the late Noel J. Becar. The Thornedale Herd will now be the finest Herd of Shorthorn Cattle in the world—and there can be no need of going to England to secure the best Shorthorns, whether blood or quality is desired. These Herds will be removed to Thornedale in June. We understand that Mr. Thorne will have about thirty females for sale, as well as some superior bulls.

DISEASE AMONG THE PEACH TREES.—We are sorry to see any alarm among our Peach growers in regard to the late *curl of the peach tree leaves*, and we were much surprised to notice a Sacramento paper quote the authority of a gardener of that city, stating it to be a disease known as the "Yellows." Nothing of this disease has yet been known in California. It is absurd to call it so. The late curl was caused by the sudden cold weather, at a period of time when new leaves had been made with uncommon rapidity. This very tender growth was suddenly arrested, and the delicate fibres of the leaf were partially frozen or so chilled as to curl, and then, growth being checked or entirely suspended, they became paler and paler, and finally fell from the tree, and new leaves have taken their places. We have seen and known entire lots of trees thus effected, some six weeks since, and at the present time they have a new and thrifty foliage, and appear as if no blight had touched them. This we believe will be the general result.

SUSTAIN HOME INDUSTRY.—We ask of our friends to sustain the true doctrines of home industry; to give a preference in all cases to the manufactures, the mechanical labor, and the productions of the soil of California. Can it be expected that California can prosper, with all her gold, if she pays out more than she receives? We preach the doctrines of home manufactures, and we intend to practice them to the utmost of our ability; and we have the pleasing consciousness of having contributed the FIRST MONEY for CALIFORNIA PRINTING PAPER on the Pacific coast. We have the agreeable fact from the books of the new Paper-Mill—that the first money received for paper was received from the office of the CALIFORNIA FARMER, thus showing that we do mean to sustain home industry.

THE DROUGHT.—We regret to announce the fact that in some sections of the State there are serious fears entertained in regard to the crops. On the San Joaquin, and in Colusi county, much complaint is made, and doubtless there will be considerable loss. But we believe that much of this loss could have been saved by a better system of cultivation. We believe that if the grain land had been plowed and laid fallow one season, or had it been *subsoiled*, seven-eighths of the crops that may now be lost would have been saved—and as it is—even with much more alarm—we shall have abundance of grain for our home use, and enough to spare.

Literary.

Whittemore, Niles & Hall, Boston, have just published *New Biographies of Illustrious Men*, by Thomas Babington Macaulay, Henry Rogers (author of the Eclipse of Faith), and others. These biographies of eminent men are entirely new, and are all written by the most eminent of living authors. They comprise memoirs of Saml. Johnson, David Hume, Thomas Campbell, Atterbury, &c, &c. A handsome 12mo. vol. of 430 pages, and is destined to have an extensive sale.

The above firm have also just published, in 32mo. form, and beautifully bound, *The Poems of Charles Swain*, whom Eliza Cook calls "one of England's sweetest bards." Blackwood's Magazine thus reviews: "And Charles Swain the poet, of whom, and of whose writings Southey has said, 'Swain's poetry is made of the right materials;' if ever man were born to be a poet, he was." This charming little volume is embellished with a portrait of the author, and is published under his sanction. It should find a place in every cottage in the land, for it is replete with all that constitutes the better part of man's nature.

Nearly ready for publication, in one 12mo. vol, *The Golden Age of American Eloquence*, with illustrative studies of Webster, Clay, Choate and others, by Edward G. Parker, Esq., of the Boston Bar. W.

The Fireman—A history of the Fire Departments of the United States, with a complete compendium of general information; statistics of loss and expense, with a highly interesting account of all large fires, theaters burned, loss of life and accidents; basis of organization; error in public sentiment, and evils in the organized bodies; causes and effect; with the views of the author as to the best means of remedying difficulties; elections, how some things are done and may be done as well as others. Anecdotes, tales, cases of remarkable daring and fortitude, riots and disturbances, and the causes and remedy; the most interesting and thrilling book of the day. Illustrated with engravings. Price $1. By David D. Dana, of the Boston Department. In press by James French & Co. 78 Washington street. Address the Author; Luke Wyman, Jr., with J. French & Co.; or the publishers.

HARPER'S WEEKLY JOURNAL OF CIVILIZATION.—This new candidate for public favor has already passed into very extensive notice, and boasts a large portion of the best readers in the country. This was to be anticipated from the nature of the paper, which is of the first class. Its paper and print, both admirable, are made the medium of matter of amusement and improvement of the most select character. Its editorial tone is conservative, safe and bold. It speaks with freedom, and commends itself to all right-thinking people by its intelligence and clear judgment. It is more general in its matter, and better calculated for outside localities than most of the New York papers, and will draw its support from all sections of the country. A very pleasant feature of the paper is its illustrations, which comprise the best things in Punch and pictures selected from the vast resources of the Harpers. The Weekly is destined to attain a first class position in the ranks of newspapers.—[Evening Gazette.

NEWSPAPER CHANGES.—The Boston Herald, the best penny paper ever published in New England, comes out in new type. We rejoice to witness such evidence of its prosperity.

The Boston Bee appears in a quarto form, which will enable the proprietors to give a great amount of reading matter. We copy the following from the leading article:

Important changes and improvements in the conduct of the paper, made in anticipation of the increase and change in its form, have already been made. The accession to the editorial corps of Mr. Pangborn, as the political editor, has been announced, and we have the gratification of now stating that Mr. Geo. Wm. Pettes, a gentleman favorably known as a vigorous and accomplished writer, is permanently associated in the conduct of the paper, especially in the capacity of literary editor. He will devote particular attention to the Boston American, a weekly paper issued from the office of the Bee.

"A Home for All," or the New Mode of Constructing our Dwellings.

MESSRS. FOWLER & WELLS' publication upon this subject, with the cheap and simple, but durable and beautiful designs presented in the work, is not only attracting great attention in many places, but so satisfactory and conclusive are the plans that we find many of these edifices springing up in many parts of our land, and from what we have seen, we verily believe they will ere long become very fashionable. Those who have tried them testify to the following facts—they are *cheap*, strong and durable; cool in summer and warm in winter, and capable of being made highly beautiful in their style and finish.

To O. S. Fowler, Esq., the world will be indebted for one of the best inventions of the age. To us in California, and in all dry countries, more especially, are such dwellings useful.

Should our readers wish to see a neat and chaste building of this style let them visit Smith's Garden, Sacramento, and they will see a neat octagon building, erected at trifling cost, which is truly a fine specimen of what can be done to make a "Home for all." We shall speak more upon the subject hereafter.

PROLIFIC NATURE OF STOCK IN CALIFORNIA. We found an instance of this while at Bidwell's Ranch. Mr. Barker has a cow, purchased in 1854, from which he has raised *eight head* of stock; also a ewe, from which, in twelve months, the progeny was *thirteen lambs*. Among sheep raisers we often note instances of three, four or five lambs dropped at once. These are all proofs of our climate being favorable to the rearing of stock, and of their great disposition to increase.

GOOD THINGS RECEIVED.—Mrs. Weaver of Washington Market, who is some famous for fine fruits, and whose baskets of fruit and wreaths of fruits and flowers, attract great attention, very kindly presented us with a fine basket of luscious Strawberries neatly decorated with flowers. By such a sample, we know that all who desire the *handsome*, can be fully satisfied by patronizing the stall of Mrs. W.

Good News!—Destruction to Gophers!!

With much pleasure we desire to lay before our readers the following information in relation to that most destructive animal, the gopher. We believe a remedy has been found which will at once rid our grounds of this pest of the farmer, and if it shall prove to the advantage of the cultivators, all we ask of them in return will be to subscribe for the FARMER, and use their influence to extend the usefulness of our journal.

It is not egotistical on our part to say we believe every person who subscribes for our journal will be the gainer. For the varied information it imparts will prove of value to every citizen, and he can also transmit it to those to whom he is allied in other States. But to the gopher!

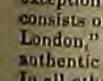
The following remedy will be found effectual for removing not only gophers, but squirrels, snakes, owls, or any reptile that burrows in the earth: Prepare strips of pine wood, about the size of the finger and six inches long, then take rosin and melt the same; dip the point of the stick into the melted rosin, about 2½ inches, and let the rosin be rolled round the point of the stick—perhaps two coats of the rosin; then take of powdered sulphur (flower of sulphur) and roll the dipped end in the sulphur till it is well coated; then again dip it in the melted rosin, and again in the sulphur, and give a last coat of rosin, making four coats of rosin and two of sulphur, to the thickness, on the stick, of one-half to three-quarters of an inch; prepare as many sticks as are gopher holes, and take them to the place; insert the stick a little distance in the hole and light it; then cover the hole with a sod, or earth, not to put out the light, and leave the remedy to work a cure. The match will burn freely, although the hole is closed, and will speedily generate sulphuric acid gas, which is and must be certain death to all that breathes below the surface, within reach of its power, and it will perforate every nook and corner of earth, where there is a pore, working downward as well as upward; thus, at once, relieving our industrious farmers of the severest trials they have had to encounter. We trust to hear good results. If so, we shall rejoice.

WHOLESALE FRAUDS—*A Fugitive from Justice.*—An extensive and most audacious scheme for counterfeiting two popular medicinal preparations has recently been brought to light in this city. A few of the leading facts have appeared in reports of the legal proceedings growing out of the affair, but its comprehensive character has been but imperfectly developed in these brief statements. It would seem that the principal person implicated in this transaction is a drug broker named William Leith, lately doing business at 8 Gold street and 5 William street, in this city, and residing at 4 Union street, Brooklyn. He had conceived the idea of establishing a factory for the purpose of counterfeiting, on a wholesale scale the most popular and widely advertised medicines in the civilized world, viz: Holloway's Pills and Holloway's Ointment. This audacious project he intended to carry out in the city of New York, almost within hail, as it were, of the great central office for the sale of Holloway's medicines in this country! He had, it appears, ordered no less than 500,000 copies of the pamphlet or book of directions, around each box, and the printer to whom the order was given, supposing it to emanate from Professor Holloway, had no hesitation in executing the work. An accident led to the detection of the fraud. Leith failed to meet an obligation he had given for a portion of the job, and the printer went to Professor Holloway's establishment, 80 Maiden Lane, to inquire the cause. Then, of course, the fraud was disclosed, and it was found, on comparing the counterfeit wrappers with the original, that the former were perfect *fac similes* of the latter, with the exception of the *water-mark*. This water-mark consists of the words "Holloway, New York and London," and is visible upon every leaf of the authentic pamphlet when held against the light. In all other respects, there was a perfect identity between the false document and the true.

William Leith, the author of this atrocious forgery, was subsequently arrested, and fully charged, on examination before the committing magistrate, with procuring the printing and uttering of the above counterfeits, but through an indiscretion on the part of the magistrate, he managed to escape from the custody of the officers, and is now a fugitive from justice. Professor Holloway's agents are on the *qui vive* to discover his whereabouts, but so far he has eluded their vigilance. He is a Scotchman by birth, and still preserves a little of his accent; his voice is deep, his articulation emphatic, and in speaking he gesticulates a good deal, and interlards his sentences with frequent oaths. His hight is about 5 feet 8¼ inches, his person rather stout, complexion florid, light hair and thin whiskers, and his age about 35 years. His address is good and business like. As it is not known to what extent he may have counterfeited the medicines, it would be well for druggists in the interior to beware of purchasing articles purporting to be Holloway's remedies from irresponsible parties. There is one test of genuineness, which may, however, be relied upon, viz: the *water-mark* on the leaves of the book of directions accompanying and enveloping each box of the Pills and pot of the Ointment. If, when the leaf is held between the eye and the light, the words "Holloway, New York and London," are discernible in semi transparent letters, in the substance of the paper, then the pamphlets and the medicines they envelop are genuine; if not they are *pernicious counterfeits*. Let this test be universally adopted.—[National Police Gazette, New York.

WE have good reason to believe that in nine cases out of ten, coughs, colds, and all bronchial irritations, however severe, may be cured by the use of Wistar's Balsam of Wild Cherry. A single trial will prove this. None genuine, unless signed I. Butts on the wrapper.

Stock Partner Wanted.



A PERSON having a fine Ranch, now stocked with 100 head of Cattle—25 Horses and 75 Hogs—is desirous of taking a partner, with some capital, as part of his own business requires his attention elsewhere. This opportunity is a good one—the ranch and feeding ground good.

☞ **WISTAR'S BALSAM OF WILD CHERRY,**
The great remedy for CONSUMPTION and all other diseases of the Pulmonary Organs.

The greater the value of any discovery the higher it is held in the esteem of the public, and so much in proportion is that public liable to be imposed upon by the spurious imitations of ignorant, designing and dishonest men.

Now that this preparation is well known to be a more certain cure for incipient CONSUMPTION, ASTHMA, LIVER COMPLAINT, COUGHS, BRONCHITIS, and all similar affections, than any other remedy known, there are found those so villainously wicked as to concoct a spurious, and perhaps a poisonous mixture, and try to palm it off as the genuine Balsam.

This is to caution dealers and the public generally, against purchasing any other than that having the written signature of I. BUTTS *on the outside wrapper.*

Prepared only by Seth W. Fowle & Co., Boston, Mass., to whom all orders should be addressed, and for sale by their agents.

Agents—C. MORRILL, cor. Third and K. sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 15-1m

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

BOOKS FOR GARDENERS.

JUST received, at the office of the FARMER, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

☞ **TO STOCK RAISERS.**—We earnestly invite stock raisers of all kinds to advise with us and give us information in regard to such stock as they may have for sale, and all the particulars of price, quality, &c. We are often inquired of relative to such matters, and can always find purchasers for almost all kinds of extra stock. Valuable stock will always sell; and we intend to keep a register of all such stock as may be in market, and assist in finding purchasers for it, and to do everything in our power to further the breeding of good stock.

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever has occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morals* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for ourees'a, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is true charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are in *health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promotes habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve! whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,316 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 232; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

NORTHERN ASSURANCE COMPANY,
For Fire and Life Assurance at Home and Abroad.
Established in 1836—Incorporated by Act of Parliament.
Capital £1,250,760 Sterling.

Annual premium for an assurance of $100 on a single life:

Ladies' Department.

[For the California Farmer.]

TO A DEPARTED MOTHER.

Thou hast forever gone, Mother!
Thy voice no more we hear,
The home, thy smile once made so bright,
Ah! now is lone and drear.
We miss thee at the social board,
Thy hand oft spread with care;
And when we gather round the hearth,
A vacant seat is there.

When sickness' withering touch, Mother,
Forces our forms to bow,
'Tis then we miss thy gentle hand,
To soothe our aching brow.
Yet can we wish thee here, to share
In all our grief and pain?
Methinks I hear thy spirit say,
Your loss is but my gain.

How can I forget thee, Mother?
Though years have passed away,
Since we in silent anguish watched
Thy life's last glimmering ray.
Yes, thy dear image claims my thought,
When morn first ope's the flower,
And lingers till the hush of eve,
To fill that lonely hour.

And to thy grass-grown grave, Mother!
My steps I often bend,
To weep in silence there—for one,
My earliest, truest friend.
And if my path, in life's rough way,
Temptations o'er beset,
Thy counsels kind, which thou didst give,
may I ne'er forget!

CLARA WILDWOOD.

[For the California Farmer.]

SONG TO THE MOON.

Oh, thou pale moon! why chain my soul,
And bind me with thy magic spell?
Thy rays are neither warm nor cold;
Yet 'neath thy beams I love to dwell.
Thy face reflects a beauty rare,
O'er vale and mountain, earth and sea;
Dispels all sorrow, grief and care,
And binds my every thought to thee.

Bright moon! I love to look on thee,
For loving orbs reflect their rays
Far o'er the seas, through thine to me;
And thus on thee transfix my gaze.
In thy pale light, angelic forms
Sweep o'er the throne of mem'ry dear;
And echoes clear, from youth's bright morn,
Are sweetly ringing in my ear.

Magnific moon! with heav'nly light,
Now sinks my soul in calm repose,
While o'er the snowy mountains' hight
Thy shining face in beauty glows.
I dream of love in those bright worlds,
Where no vile fallacy is known,
And sing my lay in simple words
To thee, at midnight, and alone.

HELEN.

LITTLE WOMEN.

In a little precious stone what splendor meets the eyes!
In a little lump of sugar how much of sweetness lies!
So in a little woman love grows and multiplies:
You recollect the proverb says—"A word unto the wise."

A pepper-corn is very small, but seasons every dinner,
More than all other condiment although 'tis sprinkled thinner;
Just so a little woman is, if love will let you win her—
There's not a joy in all the world you will not find within her.

As within the little rose you find the richest dyes,
And in a little grain of gold much price and value lies,
As from a little balsam much odor doth arise,
So in a little woman there's a taste of Paradise.

The skylark and the nightingale, though small and light of wing,
Yet warble sweeter in the grove than all the birds that sing;
And so a little woman, though a very little thing,
Is sweeter far than sugar, and flowers that bloom in spring.

"Elsie."

A VOICE FROM WISCONSIN.

A PLEASANT voice comes to us from the great State of Wisconsin, and we rejoice to note the interest that is felt for California, in far-off lands.

This letter, from which we have quoted, was of a private nature, and we only give portions of it; but we know we shall be pardoned by our accomplished correspondent "Elsie," from whom we hope to hear often.

"Elsie" desires our journal; it will be duly mailed, and we trust its influence will always be to awaken in our readers, in other States, a desire to know California; for to know her, will be to love her; and if we can but place a true picture of California in every family (we mean the CALIFORNIA FARMER) we know they will so love California, as to come to us and make it their home.

When the contrast is drawn between the frozen winters of the old States, and the mild and beautiful clime of our own, few can hesitate in choosing that home. While we appreciate that love of the native home, so warmly defended by "Elsie," in her closing paragraph, we are confident that, ere long, even "Elsie" herself, and those over whom she can exert an influence, will be casting their wishful eyes to our sunny clime, to our land of bright flowers and luscious fruits, aye, and our land of gold. Rich, happy, and fertile as may be those great States, once called the "Far West," yet the car of progress sets forther westward, and to our land *must* come those destined by Providence to build up and make the happy homes of our favored land.

We shall look with deep and earnest anxiety for the voice of "Elsie;" it will ever be welcome, and the bright happy group that gather at times in the "Home Circle" of the FARMER will enrol the name of "Elsie," as one of the stars that shed a steady and a pleasant light around us. Hear what "Elsie" says:

WAUSHESHA, Wisconsin, March 8th, 1857

MESSRS. WARREN & CO.—Gentlemen: Some weeks since, I looked over a file of the CALIFORNIA FARMER, lent me by one of your pleasant correspondents. I was very much pleased with your journal, and am particularly interested in the progress and welfare of your distant State. I observe you devote considerable space to the home circle, which is commendable.

Our Northwesternites would like to hear something, occasionally, from California, whither the friends of many of them have gone, and you may like to know something of our cool corner of the United States.

How much we shivering Northerners have talked about California, the past two winters—so cruel to our nurseries and orchards, as well as humans. The fruit growers of Wisconsin, who often meet, in social conclave, in our "Woodside" cottage, while they sigh over the rain and wreck of lost hopes, cast longing glances toward your favored land. But for the dislike of removing our families from the society and privileges of *older* countries, we should, some of us, be thitherward bound.

I do not think this has been as severe a winter as the last, in our vicinity. It has not, thus far, been considered so destructive to fruit trees. Winter closed in with *dry* ground, the snow falling early, and remaining much of the winter—which, I believe, is considered much more favorable than when the ground is deeply soaked with water—to remain frozen for months. However, we mustn't boast, for we know not what the spring may do towards cutting off our fruit, if not our trees. We may think we are getting on famously, and about the middle of June, in one night, Jack Frost will carry everything before him.

Yours, ELSIE.

[For the California Farmer.]

May Day Festival.

SACRAMENTO, April 14th, 1857.

MR. EDITOR: Something for our paper! says the editor. But editors are so exacting: they even require our articles to be *original*. Just as though such things as original ideas were within the reach of every one, and could be had by the asking. But we learn from philosophy that in the world of matter nothing has been lost or added since the creation; and so reasoning from analogy, conclude it must be even so in the world of mind; and after laboring hard to produce something which we vainly imagine to be *new*, find it, after all, to be nothing but a new arrangement and combination of old ideas presented in a somewhat different form. And from these reflections I am led to conclude that the unequal distribution of these ideas, among the sons and daughters of Adam, may account for the superabundance with which some are favored, while others fail to receive their due share; and as it is my misfortune to belong to the latter class of individuals, I shall hope to be excused from attempting to contribute anything *new* or interesting to your paper. Though *were* I possessed of that rare gift—"the pen of a ready writer"—it should be often wielded for the benefit of your readers. And the many pleasing subjects, which a life in California daily presents, should receive due attention. Among which would be its delightful climate, its pleasant homes, its beautiful and varied scenery, with which it abounds, particularly at this season, when flowers of endless variety are springing up to view, not only in the neat and cultivated gardens, of which our city and its environs can boast; but "far o'er hill and dale," as far as the eye can reach, is it greeted with these harbingers of love and beauty, whose silent but expressive language tells us of the beneficent Giver of all these bounties, and who scatters them so profusely in our pathway. Subjects worthy a poet's pen, and an artist's pencil, truly. But I forbear, lest I tread on forbidden ground.

But as the great Floral Gala-day is fast approaching, permit me, with my "pen of prose," to suggest the propriety of making it a day of general festivity and rejoicing to all classes, in which children and youth, as well as parents, teachers and guardians, can unite in celebrating it as such. At a time when nature is dressed in her gayest attire, what more fitting season to pay to the goddess Flora our grateful acknowledgments of all these beauties which surround us? In what manner this day should be spent, I would leave to the good taste of others; but it has been suggested that the ladies of our city lend their assistance in *getting up* a Floral Exhibition and Festival, which, with the facilities afforded us for making a *grand display*, we consider a very *happy idea*, although it may not be an *original* one. And now, Mr. Editor, knowing the enthusiasm with which you are ever ready to enter into anything which will promote the interest and pleasure of the community, I have merely *presented* the idea. leaving it to yourself and others to co operate in any plan which may be calculated to promote the greatest amount of pleasure to all. And will lay aside my pen for the present, fully confident that its effusions will not be again solicited, unless a new flock of ideas from some over-burdened mind, chance to light upon the empty perch of my cranium, in which case they shall be cheerfully submitted, for the enlightenment of your readers, and the world at large.

SIGMA.

A BROKEN HEART.—"Did he strike you?" asked a judge in Cincinnati, of a witness who had testified that her husband had abused her.

"No sir," replied the modest and delicate woman, "he has never struck me, though he has often threatened to do it. He abuses me, and I am obliged to flee from his presence."

"Did he break any of the furniture?" asked the Court.

"No, sir," responded the witness, as a tear dropped from her eye, and she placed her hand on her bosom. "No, sir, he did not break the furniture, but he has frequently threatened to break my heart, and he is doing it, sir."

Poor woman! she evidently spoke the truth. The bloated monster who stood beside her, though he had once solemnly promised to love and protect her, is now her most bitter persecutor, the sorest trouble. No doubt he once did love her. No doubt but that at one time he would rather have died than cause a bitter tear to start from her soft blue eyes, but intemperance has unmanned, brutalized him, and he is now breaking her heart. Heaven help the drunkard's wife!

Marriage.

NATURE never did betray the soul that loved her, and nature tells men and women to marry. Just as the young man is entering life, just as he comes to independence and man's estate, just as the crisis of his being is to be solved, and it is to be seen whether he decide with the good, and the great and the true, or whether he sink and be lost for ever—matrimony gives him ballast and a right impulse. War with nature, and she takes a sure revenge. Tell a young man not to have an attachment that is virtuous, and he will have one that is vicious. Virtuous love, the honest love of a man for the woman he is about to marry, gives him an anchor for his heart; something pure and beautiful for which to labor and to live. And the woman, what a purple light it sheds upon her path; it makes life for her no day-dream, no idle hour, no painted shadow, no passing show; but something real, earnest, worthy of heart and head. But most of us are cowards, and dare not think so, we lack grace, we are of little faith, our inward eye is dim and dark. The modern young lady must marry in style; the modern young gentleman marries a fortune. But in the meantime the girl grows into an old maid, and the youth takes chambers, ogles at nursery maids, and becomes a man about town, a man whom it is dangerous to ask into your house, for his business is intrigue. The world might have had a happy couple, instead, it gets a woman fretful, nervous, fanciful, a plague to all around her. He becomes a skeptic to all virtue; corrupter of the youth of both sexes; a curse in whatever domestic circle he penetrates. Even worse may result. She may be deceived, and die of a broken heart.

He may rush from one folly to another, associate with the vicious and depraved; bring disgrace and sorrow on himself and all around, and sink into an early grave. Our great cities show what becomes of men and women who do not marry. Worldly fathers and mothers advise their sons not to marry till they can afford to support a wife, and the boys wickedly expend double the amount in low company. Hence it is, all wise men (like Franklin) advocate early marriages; and that all our great men, with few exceptions, have been married young. Lord Eldon was so poor that he had to go to Clare-market, London, to buy sprats for supper. Wordsworth had only one hundred pounds a year when he first married. Coleridge and Southey we can't find had any income at all when they got married. We question at any time whether Luther had more than fifty pounds a year. We blast humanity in its very dawn. Fathers, you say you teach your sons prudence; you do nothing of the kind; your worldly wise and clever son is already ruined for life. You will find him at the faro-table, and at free-love circles. Your wretched worldly wisdom taught him to avoid the snare of marrying young and soon; if he is not involved in embarrassment that will last him a life, he is a blaze fellow, heartless, false, without a single generous sentiment or manly aim; he has

"No God, no heaven, in the wide world!"

v6-20 3m WM. BAILEY & CO., Proprietors. San Francisco

HORTICULTURAL.

Commercial Nursery,
Three-Quarters of a Mile East of the City of San Jose.
THE Proprietors of this Nursery, having received the award of the
FIRST PREMIUM
OF THE
STATE SOCIETY
the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of
FRUIT AND ORNAMENTAL TREES,
For the Trade of 1856 and 1857,
that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.
Our Stock consists of
One Hundred Thousand Trees,
FROM FOUR TO ELEVEN FEET IN HIGHT.
Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;
TOGETHER WITH
Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.
Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.
Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.
Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.
Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.
☞ Our Agents are as follows: Locount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.
All communications addressed to the subscribers will receive prompt attention.
v7-1 3m SMITH & WINCHELL.

Smith's Pomological Gardens
AND
NURSERY.
On the American River, 2½ miles from Sacramento.
THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of
Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants
to be found in any one establishment on the Pacific Coast.
Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.
FRUIT TREES—fine, vigorous, and in every variety of the following:
Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.
ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.
Among the fine Trees are the following varieties:
Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Allanthus, and China Trees.
Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.
We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.
ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.
Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.
GARDEN SEEDS.—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.
☞ Catalogues furnished to applicants.
*** Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.
A. P. SMITH.

NOTICE.
We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.
Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.
☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.
v6-19 3m A. P. S.

San Jose Nursery.
THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of
FRUIT AND ORNAMENTAL TREES,
ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.
Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 69 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.
The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer
Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.
In each of the above the very best and most approved varieties.
The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—
Black and Honey Locust;
Chinese Allanthus, Catalpas.
—Also,—
20,000 Mulberry Trees,
All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.
ROSES! ROSES!! ROSES!!!
In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 96 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.
The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.
Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.
Address letters to L. PREVOST,
San Jose City.

PACIFIC MUSEUM,
Corner of Clay and Kearny streets.
INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!
THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Wolf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.
Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.
A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montes.
☞ A full Brass Band is in attendance every evening.
Open every day and evening (Sundays excepted).
*** Admission 25 cents during the Day, and 50 cents in the Evening. v7-2

THE CELEBRATED

PACING STALLION,

"BILL BLOSSOM,"

PEACOCK STOCK,

And the only PACER of that Stock, will stand at

TATTERSALL STABLE, OAKLAND,

Commencing April 15th and ending August 1st, 1857, at

Seventy-Five Dollars per Season. - - - - - - Terms Cash in Advance.

THIS CELEBRATED PACING STALLION WAS BRED IN CANADA, BY D. PREVEE, ESQ., IS FULL Brother to the celebrated Trotting Stallion FRANK PIERCE, now owned at White Hall, New York. He is seven years old, Chestnut Sorrel, Fourteen-and a-half Hands High, and possessed of great muscular strength.

He is sound in every respect and of disposition as gentle as could be desired in a horse, a fact which should not be overlooked by those who desire to raise fine Horses. He has a fine head and neck, tremendous shoulder arm, stifle and gaskin,—short back, well ribbed up, and is a very Smooth Pacer.

When in Canada he was known as Canada Peacock, and CHALLENGED Upper and Lower Canada. He was imported to Albany, N. Y., by O. C. Gunn, Challenged the State of New York, and in two matches won them both. From Albany he was brought to California, where he has had two matches, winning each. He has never yet been beaten, and now

Challenges any Pacing or Trotting Stallion in the United States,

Best 2 in 3 or 3 in 5, One Mile Heats, in Harness; or any Trotting Stallion, now in this State, 2 mile heats, best 2 in 3, over the Pioneer Course, San Francisco, for from $1000 to $5000, any time out of his Standing Season.

He is a Sure Foal Getter---Never Failed in any Instance.

☞ Gentlemen having Mares at a distance, may rest assured that every attention will be shown them, and charges moderate.

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,

SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

MEDICINES, &c.

J. L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

THE ONLY ENTIRE HORSE in this State sired by the celebrated BLACK HAWK, of Bridport, Vermont, and can be seen at the Black Hawk Rancho, sixteen miles from this city, on the San Jose road, for the ensuing season of four months.

Colts Sired by David Hill in 1856,

Persons owning the same are requested to call on the undersigned before they are one week old, register and receive certificates for the same.

Colts Sired by David Hill in 1855,

I will give for Entire Colts five hundred dollars, and three hundred for Fillies, delivered sound, at the office of the agency, Black Hawk Stables, 99 Pine street.

Eastern Items.

THE steamship Orizaba, Capt. J. H. Blethen, arrived on the evening of the 20th, from Panama and San Juan del Sur, with dates from New York to the 23d March, and 430 passengers.

LATEST NEWS FROM WASHINGTON.—We copy the following California Appointments, telegraphed to the S. F. Evening Bulletin:

Collector—(San Francisco), Col. Benj. F. Washington.
Naval Officer—Frank Tilford.
Surveyor—William B. Dameron.
Marshal Northern District—Major Solomon.

Mr. Elder succeeds Mr. Foreman as Postmaster at Sacramento.

Mr. Lester is Collector at Stockton.

Charles H. Winder is Judge Advocate, Naval Court of Inquiry.

THE MIGRATION TO KANSAS.—The migration to Kansas at the present season, so far, exceeds anything of the kind ever witnessed in our country. We doubt whether the emigration to California was greater than that now going forward to the new territories. St. Louis is filled with strangers, and our steamers are o owded with the sturdy yeomanry of the older States, all destined for the fruitful plains of Kansas.—[St. Louis Democrat, 16th ult.

The Bank of Newcastle, at Pittsburg, Pa., has stopped payment—having but four dollars in specie to redeem $100,000 of their notes. The cashier, Mr. Waggonseller, is said to have absconded with $50,000.

An Army order of the 19th of March, assigns Brevet Brigadier General Newman S. Clarke, Colonel sixth Infantry, to the command of the Department of the Pacific; headquarters, San Francisco. Gen. Wool will assume command of the Department of the East; and Gen. Twiggs the command of the Department of Texas.

Ex-Governor Bigler, of California, has been appointed Minister to Chile.

Colonel Wheeler, who has held the commission of Minister to Nicaragua ever since the cessation of diplomatic intercourse, has recently resigned it.

Wm. R. Drinkard, of Virginia, has been appointed Chief Clerk in the War Department.

Governor Geary was in Washington, and the State Department has received his resignation.

The corner stone of the Clay Monument, to be erected at Lexington, Ky., will be laid July 4th. The Rev. Robert J. Breckinridge will deliver the oration on the occasion, and not the Hon. Edward Everett, as heretofore reported.

Congress has appropriated $20,000 to renew the furniture of the Executive Mansion; and also $11,000 for the repair of the public grounds in Washington.

At the Inauguration Ball, in Washington, it is stated a beautiful lady appeared in a dress of Mexican gold cloth, and attracted much attention.

The New York Herald estimates the collective wealth of the members of President Buchanan's Cabinet at $4,500,000, and finds security in that fact against Galphinism.

The receipts of the American Colonization Society, for the year 1856, amounted to $81,138.

The Illinois Stock Importing Association have appointed a commission of three persons, consisting of Hon. H. C. Johns, S. N. Brown, and H. Jacoby, to go to Europe the present spring, and make purchases of blooded stock to the extent of $30,000.

The Great Eastern steamship, now building in England, is expected to be launched in August next, but several months must elapse after that before she can be made ready for sea. The amount expended on her up to the present time, is about $2,000,000; and an additional sum of $75,000 will probably be required to complete her.

GEN. SCOTT'S PAY.—The arrears due the veteran hero, as provided by the late act of Congress, will amount to about $32,400, and his annual pay and emoluments will be hereafter, $15,000.

THE PAPER PLANT.—Mr. David Williams, of San Jose, has received from Mrs. A. L. Beaumont, of Arena, Wis., a quantity of the seeds of the paper plant. In a letter accompanying the seeds Mrs. B. says: "I shall wait no longer, so will let you have the first seed that may be cultivated in California. There is not a foot of ground in the world that this plant will not grow and do well upon. It grows from five to seven feet high here, and would grow a great deal higher if the frosts held off longer. Soon as vegetation starts in the spring this plant starts and goes ahead of everything else. In the latter part of September we are sure to have frosts that stop its growth. The seeds never have to be planted but once, for, like asparagus, the roots live always and can be transplanted to any part of the world, but do best in low, wet land. You will be sure to have hundreds of people come to see your plants, for these are the first sent to California.

"I send you some seed of the winter tomatoes; they keep the year round, like apples or potatoes. I also send you some seed of the winter watermelon, a splendid kind; they keep all winter, the core red as blood, and weigh from forty-one to forty-nine pounds. Also, a few seeds of the Spanish melon for summer use."

SUIT FOR COLLUSION IN FLOUR SPECULATIONS. John G. Body commenced suit last Tuesday, 21st, in the U. S. District Court, against Captain Wm. L. Dall, of the Oregon steamer Columbia. He alleges that he took passage for Portland, in Oregon, on February 20th last, for the purpose of purchasing flour for this market. He further alleges that Capt. Dall, colluding against him with one John Green, delayed the steamer and sent Green ashore, so that he reached Portland before the plaintiff, and forestalled him in the purchase of flour. He therefore claims damages against Capt. Dall in the sum of $20,000.

SUSPENSION BRIDGE AT FOLSOM.—The cables of wire which suspend the bridge at Folsom, are 600 feet long, and four inches in diameter. The whole structure is very strong and imposing.

HIGH UP.—The Sacramento river has risen, says the Union, to 16 feet 11 inches on the city guage—within one foot of the highest point reached last winter.

COW CONVENTION.—The farmers of Merced county are having assemblages for the purpose of selecting from mixed droves of cattle, which have run together, their own stock.

HOLLOWAY'S OINTMENT.—Purge the system at this season of the year with a few doses of this wonderful medicine. It acts upon the liver and stomach, purifying the blood and assisting digestion. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box.

SEEDS, &c.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (SORGHUM SUCAR).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by

J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
15 John street, New York City.

v6-24 tf

CHINESE SUGAR CANE,
OR,
SORGHO SUCRE.
PURE SEED.

THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 30 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,

W. P. ORME, Atlanta, Georgia.

ATLANTA, November 7, 1856. v6-22

SEEDS.

Benicia High School.

THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev C M Blake, A. M., is now conducted by CORNELIUS J FLATT, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17TH of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS:

	PER MONTH
Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective, Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	5 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.

No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.

For further information or references, address the Principal.

v6-24 C. J. FLATT.

Spice and Wormwood Bitters.

THE above Celebrated Tonic, so long and favorably known in the Atlantic States, is acknowledged superior to any Bitter now in use. It is concocted from the purest ingredients, and may be used by the most abstemious with beneficial effect. As an APPETISER, IT IS UNRIVALED! The subscribers are SOLE AGENTS in California, and any other Bitter with this name, is NOT GENUINE.

Garden and Field Seeds.

All of which are offered on best terms, and particular attention given to packing, and arrangements made for freight, &c., to California.

Orders, accompanied with cash, or satisfactory drafts on New York, will have prompt attention.

R. L. ALLEN,
189 and 191 Water street, New York.

v6-21 6m

The Farmer's Drill.
[PATENTED, AUGUST, 1853.]

THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct. 28th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.

Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.

This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.

For full particulars address

M. G. GRIFFITH, Agent, Diamond Springs, Cal.;
Or to C. FINKBONER
(Of the firm of G. W. Stewart & Co.),
Grain Dealers, San Francisco.

N. B.—Any of the above named articles can be had at our branch store at Marysville. v7-9 tf

The Great Stump Puller.

WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.

It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.

It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.

The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.

Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!

It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO.

New Cultivator.

THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measures operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who wish finely cultivated soil it has no equal.

Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.

All persons are invited to call at the workshop and examine it.

R. BEECHING, Manufacturer,
35 Pine street, San Francisco.

The Most Successful and the Best.
NOW COMPLETE AND FOR SALE,

SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer Illustrated with cuts.
Six Charts for Primary Schools.

By EPES SARGENT, author of "Standard Speaker," &c.

The following are nearly ready:

Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

FOR PURIFYING THE BLOOD,
AND FOR THE CURE OF

Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the STOMACH, the CIRCULATION, and the BOWELS, and thus three processes, which are ordinarily the result of THREE different kinds of medicine, are carried on at the same time through the instrumentality of THIS ONE remedial agent. Its great merit is, that it meets and NEUTRALIZES the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.

LYNN COUNTY, Oregon Ter., March 11, 1855.

MESSRS. A. B. & D. SANDS, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted, and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 3d of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were reduced, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swellings in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor, as all our neighbors will certify.

Yours, respectfully,
CALEB DAVIS.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co. Marysville; E. H. McDONALD & Co., Sacramento; and by Druggists generally.

ROMAN EYE BALSAM,
FOR INFLAMED EYE-LIDS.

The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eye-lid evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.

READ THE FOLLOWING EVIDENCE.

NEW YORK, July 15, 1856.

MESSRS. A. B. & D. SANDS: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your ROMAN EYE BALSAM, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years.

Yours, &c.,
G. B. WILLIAMS, 262 BROADWAY.

PRICE, 25 CENTS PER JAR.

Agricultural Reviews and Essays—No. 10.

Goldsmith, and his "Animated Nature."

(ARTICLE 2ND.)

THE sacred historian tells us that when the great Creator had constructed the fair fabric of this earth, and separated the waters from the dry land, he made the sun and the moon; "the greater light to rule the day, and the lesser light to rule the night, for signs, and for seasons, and for days and years, and made the stars also;" furnishing the earth with trees, and shrubs, and plants, and living creatures; and, as the crowning work of all, that he made "man in his own image—male and female." But though he left the progenitors of the human race to discover and search out for themselves the different plants and minerals, the inspired writer mentions how he brought every animal which he had made before Adam, as if to exhibit to him his perfect creative skill, and introduce to him and his fair helpmate the companions which he had provided for them in the infant colony. The farmer who leaves his city friends, and goes far away from "the busy haunts of men" to enter upon his agricultural pursuits, and, like another Cincinnatus, regardless of civic honors, prefers the natural enjoyments of a country life, may not be so enviably circumstanced as Adam was, when "in Eden's bonny yard" he plucked the fruit which grew around him in joyous abundance, or reaped the crops which sprung spontaneously from the ground. But his situation is much preferable to his, when, exiled from the earthly paradise, he went out "to till the ground from whence he was taken," without skill, without experience, and without assistance or aid of any kind from extraneous sources; *and he has the same companions still.*

I have little sympathy for, "nor would I enter on my list of friends," the man who looks on the creatures of God as only made for indiscriminate slaughter, and as fit objects for him on which to try his skill as a marksman. But it takes a man like Goldsmith to inspire sufficiently that feeling of interest for "each animal after its kind," which is so calculated to soften and humanize the heart, to make us forget, for the time, that we are men, and be in doubts whether we are not successively the very animal which he is engaged in describing. Let me try to believe that a barbarous disregard for the feelings of animals is confined to those who have never read his work. Scott said that Shakspeare never had but one rival, the Eastern magician who could enter at will the breast of every man, and read his thoughts at his leisure. Goldsmith can perform a greater feat. His magic wand effects a more powerful spell. Whether you will or not he transforms you into another creature. Now, as the lion, you roam the Numidian forest, and are king over all; every animal, by its undissembled fears, evincing how much it respects thy dread supremacy—now, out in the unpeopled wilderness, as the prairie-dog, watchful and wily, and sharing thy hospitable burrow with thy feathered friends—now, as the beaver, with ingenious skill cutting logs of pine to build your dam, and constructing your house with a mechanic's foresight!

Does the reader doubt me? Let him read his description of the Reindeer. Far away, in the outskirts of habitation, where the level suns of summer never set, and where, in winter, the inhabitants are involved at midday in twilight obscurity, his potent pen has conjured up a terrestrial paradise from which you feel no disposition to depart, and where you envy not the enjoyments of those who live under southern skies. Yet how does your heart bleed for the poor reindeer! In the valleys the pasture is rich and abundant. No sooner has the snow melted on the sunny slope than the grass springs up with unexampled vigor. But the summer sun which melts the snow, and furnishes abundant pasturage for the extensive herds of the wealthy Laplander, brings into existence such swarms of gnats and gadflies, that the persecuted flocks are glad to escape from their merciless stings, and flee for safety to the mountain tops. The poor reindeer endeavor to escape in vain. The watchful dogs of their keepers, faithful to the duties to which they have been trained, are at their heels; and force them back from those bleak and snowy summits, on which they could barely subsist, to endure, with more luxurious fare, fresh torture from their galling tormentors.

Happy Laplander! Living at his ease, and tending his flocks which supply him with all he wants, he looks upon himself as the most enviable of mortals. The flesh and milk of his deer and goats furnish him food. Their skins supply him with clothing, and a covering for his hut. He has no wants which are not amply provided for, and no cares which he cannot easily remove. Even when dreary winter comes he finds himself more especially under Nature's charge than others. There grows under the snow a moss on which his hardy deer subsist, and dig out for themselves, without his assistance, while he retreats to his snow-covered cottage, to enjoy unmolested the supplies which he wisely laid up in summer, and have every luxury of which a Laplander knows, or cares about. We have read how the imperial Catharine of Russia constructed for her favorite minister a palace of ice; but Goldsmith does more. He creates, by his charming descriptions, an Arcadia in Lapland, and reproduces the pleasures of the golden age among eternal snows!

But he is equally at home into whatever region he takes you. Not only has he verified the prediction of Johnson, when told that he had made arrangements for writing a work on Natural History, that "he would make it as amusing as a fairy tale;" it is itself a fairy tale. But it is more. It is a theological treatise. As he describes them, each animal portrays some new evidence of Divine wisdom, and in accordance with the proposition of the great Dr. Paley—that "instinct is natural revelation," displays some new feature in the ideas of the creative mind, and unfolds to admiring man the extent of the Creator's care.

When a man leaves his residence, his friends who are acquainted with the people among whom he intends to dwell are generally careful to offer him letters of introduction to their several acquaintances, and any one would be considered negligent of his own happiness, who did not avail himself of their proffered kindness. Can we suppose that any farmer, who is living among and daily meeting so many of Dr. Goldsmith's friends, would not feel proud of having it in his power to receive such a mark of attention from so distinguished a man? especially as a better acquaintance with them is likely to afford him so much pleasure? I believe not. The only excuse which I can think of, that any one would have for not retaining as a constant companion Dr. Goldsmith's History of the Earth and Animated Nature, is, that he was not aware that he had written such a work.

Of all the editions of the Animated Nature ever issued from the press that of Blackie & Son is one of the best. Though Scotland has been prolific in literary men, there are obstacles in the way of publishing even in Edinburgh, as is well known to booksellers, which do not have the same influence in London. For which reason, few books are published in that country which are not qualified to force their way into public notice by their own intrinsic merit. Of all the works published by the well-known firm from which this work emanates, few have been got up with more care to meet the requirements of the present state of knowledge, or more in accordance with the popular sentiment. To have attempted to alter, or add to the text of Goldsmith anything which "profane persons" might have considered an improvement, there is no man of right feeling who would not have looked upon it as a species of sacrilege. But since the days of Goldsmith, science has been making great advances; and to furnish a work on Natural History, suited as a book of reference for intelligent men, something more was wanted. To supply this unavoidable deficiency, the publishers have added copious notes of the most valuable description, almost equaling in amount of reading matter the original text. In fact there is nothing by more modern authors of general interest, on the different subjects on which Goldsmith treats, which has been particularly noticeable for its value, which they have not added. In one place we have that well-known treatise on the Trade Winds by Basil Hall, for which Louis Philippe conferred upon him the cross of the Legion of Honor; in others, extended quotations from the valuable writings of Audubon.

Every thing seems complete and perfect if we except the steel-plate engravings, in which the animals are too much huddled together. They say there is a reason for everything, and there was a reason for this; and as it shows one of those tricks of the Trade, to which even respectable booksellers occasionally resort, it is right to expose it, to show them that the public have their eyes open. The firm of Blackie & Son was originally connected with that of Fullerton & Co of Glasgow; in which city they carried on business together, under the title of Blackie, Fullerton & Co. For their mutual convenience the partnership was dissolved, and the publishing house of Blackie & Son was established in Edinburgh, Fullerton & Co. continuing to do business in Glasgow. During the time that they were doing business together in that city, Blackie, Fullerton & Co. published an English edition of the German "Conversations' Lexicon," being a reprint of a translation of that work which we had published in the United States with a few additions, (which form the most reliable portion of it), under the title of the "Encyclopedia Americana." The work is small for an encyclopedia, but it was thought it would be particularly suited for the intelligent middle classes of Scotland, and of English readers generally. It had been loudly cried up; and even the talented Lord Brougham had characterised it as "the world-renowned Conversations' Lexicon." So the spirited Scotch publishers of Glasgow concluded to adopt it, and steel-plates more particularly adapted for a cheap publication were expressly got up for it. But what passed current in Germany as a valuable work, and may to the present day with many among the less informed in the United States (though generally rejected) was not calculated for Great Britain, where the scrutiny of a more learned research and better-matured philosophy soon revealed that it was full of errors, and could not be depended on with sufficient certainty for a work of reference, and that it was in consequence of little value. Another circumstance contributed to its downfall. Lord Brougham, who was president of the Society for the Diffusion of Useful Knowledge, and who much admired the dictionary form of the Conversations' Lexicon, in which the sciences are discussed in portions, and treated in separate articles, thus rendering it more useful for reference, had sufficient influence to induce the Society to publish a similar work—the "Penny Cyclopedia." As this work was much more extensive, and was as complete as the other was defective, and was also published at a very cheap price, it was a rival which the other could not withstand. But the steel-plates were too good to be thrown away; and Blackie & Son have thought fit to use them in their edition of Goldsmith's Animated Nature. This is a pity. They ought not to have compromised a valuable work with anything connected with one which had proved so complete a failure. But such tricks are usual with Booksellers. Even Knight, the publisher for the Useful Knowledge Society, has again and again had recourse to kindred expedients, for getting

> "The funeral baked meats
> To coldly furnish forth the marriage table."

What a valuable quarry did that same Penny Cyclopedia prove in his hands, from which to construct, from already-provided materials, books on almost every subject!

But to return to Goldsmith. It must be gratifying to every one to think that he who had labored so long and so unthankfully was eventually better paid. Though he only got sixty pounds for the "Vicar of Wakefield," and twenty guineas for "The Traveler," he cleared by "The Good Natured Man" five hundred pounds; by "She Stoops to Conquer," eight hundred pounds; and disposed of the copy-right of the principal of his other works for the following sums: "The Deserted Village," one hundred pounds; "The History of England," five hundred pounds; "The History of Rome," two hundred and fifty guineas; and "The Animated Nature," eight hundred guineas.

In California, we have as yet had very little pure literature published, except in periodicals; in which case the publishers take the lion's share of the profits. The poor writer seldom gets anything. Let them think of the "heavy scoundrels" who did not take the best method of advancing their own interest. AGRICOLA.

P. S. Many thanks to Mrs. Alice, who I see has another name, for her fancy pickles. A.

Letter from New York.

NEW YORK, April 6, 1857.

EDITORS FARMER: I am somewhat at a loss whether to write or not, as I do not yet know if you have received my last letter. Not having received a single paper from you since I left California I am not well posted in what is going on, any further than I can learn through the various papers from San Francisco. They leave a gap unfilled, thus rendering the news incomplete. The CALIFORNIA FARMER seems to form the connecting link between the commercial, financial, and agricultural interests of the State. Leave that out, and all appears disjointed and incomplete. You will now readily see what I am driving at, and so I will not mince matters any longer, but come out boldly and say, I wish you to send me the FARMER by every mail coming to New York. Now that is plain old Saxon, and you can understand it full well, and I know you will do your part. But Uncle Sam's rascally boys, I believe, keep the California papers to make kites of, as they will, without doubt, fly higher, plunge deeper, and kick up a more general and wide-spread commotion than any other papers in all creation. Indeed they are in such demand that I have had only *three* out of the scores of papers sent me from the Golden State, since my return in January last.

As we do not attend much to farming in these diggings until the *snow is all off*, I will just post you up a little on a subject in which you, as well as other Californians, feel a deep interest; one that, in my opinion, is destined to do more for your State, than any or all plans yet proposed to fill up California with a hardy and industrious population. I allude to the California and New York Steamship Company. You are aware, I presume, that Capt. Randall is in New York, preparing to place a line of steamships, such as the world has never seen, between this city and San Francisco. Your readers will remember that there was published through the columns of your paper, in October last, the first detailed account of that magnificent enterprise ever presented to the public. It was then thought that the ships would be in your city in October next. In consequence of the unavoidable delay in making the preliminary arrangements for building these mammoth ships, they will not probably enter the golden gate before the beginning of the next year. If I am not much mistaken, the San Franciscans will be aroused, about that time, from their morning nap by the booming of the gun of the "Morning Star of the West," full ten days sooner than they expect either mails or steamer. One will start with the mail steamer from New York, give the old lines fair play, and will reach San Francisco, unload the passengers and freight, take a couple thousand passengers, and bring dispatches down to Acapulco for the mail line that left New York with her.

The feasibility of this enterprise, its exact adaptation to the wants of California, the magnitude of its details, and the grandeur of its results, have secured the admiration of all classes in this city, and wherever it is known. The most scientific men, the most intelligent and experienced steamship captains, and the most skillful builders in this city all concur in the opinion that for safety, speed, comfort and strength they will far surpass all that have ever yet been constructed, either here or in Europe. I have seen and conversed with many of the most eminent ship owners, engineers, merchants, mechanics and tradesmen, all of whom fully believe that they will surpass the expectations of their most sanguine friends, and, with one voice, say they will be the salvation of California. So much for the opinion of the dear public, here.

The matters of the company now stand thus: Captain Randall has contracted for building one or more of these leviathans of the deep. The timber is nearly all ready, and a portion of it on the ground; the engines are in course of construction, or rather the materials are being made ready. The keel of two will be laid, I presume, during the present month, and the work driven forward with as much dispatch as possible.

These ships will be 450 feet keel, 475 feet over all. There will be 175 state-rooms of extra size, to suit ladies and gentlemen from any part of the world, wishing to travel for pleasure; the accommodations being equal to the best hotels in this country or Europe. The hull, model, engines, boilers and all the internal and external arrangements will be on a grand scale, with all the latest modern improvements in boilers and engines.

These ships will for the present run by way of Panama. The Honduras Railroad is now, or soon will be under contract in three sections, the whole to be completed in two years from this spring. They will run up to a wharf on both sides—at Puerto Caballos on the Atlantic, and La Union, on the bay of Fonseca on the Pacific. The whole distance from ship to ship will be one hundred and sixty miles, and the passengers and freight will be taken from one ship and put on board the other, within twenty-four hours. This route will be *eleven hundred miles* shorter than any other, and passengers will be taken from this city to San Francisco in twelve days, with all ease; and from London or Paris, in eighteen or twenty days.

This road will be completed in two years, from the present spring; the whole being under contract in three sections, the work progressing on all alike, and simultaneously. I have little doubt you will hear the gun from one of these steamships in less than twelve months. When that new steamer's gun awakens the echoes from the hills towering around the city of the Golden Gate, you will see California rising from the dust, robed in beauty, guided with power, shaking from her locks the dew-drops of the morning, and with majestic step enter upon the shining path of renown. Crowds upon crowds of the noblest sons and daughters of the East, and of every clime, will begin to swarm over her Plains, nestle in her fruitful Valleys, and cover her clustering Mountains. Then will her glorious star wheel higher and still higher up her brilliant sky, her blazing gems, her glittering ore will be brought to light, and her untold agricultural, pomological and horticultural riches will be developed.

These ships can and probably will carry to your shores six thousand persons per month, or ten thousand, if they wish to go. It is most emphatically for the people, that this line is intended to give the masses a chance to seek a home in that garden spot of the world. Every man in California should have one or more shares, if possible, in this Company's stock, which will be sure to pay thirty per cent on the investment, and *retain over four hundred thousand dollars per month now paid to other companies* for freight and passage, in the State, or the round sum of $5,000,000 per year.

All honor to those engaged in the good work of getting this line up. They will soon be able to see the work of their hands, and rejoice in the prosperity of their adopted State. B.

MASS. HORTICULTURAL SOCIETY.—We have received, by the politeness of Dr. Eben Wight, Corresponding Secretary of the Massachusetts Horticultural Society, the reports of committees on premiums and exhibition of 1856, and the schedule of prizes for 1857. Since the establishment of this Society in 1829, it has been one of the most active and useful associations of the kind in the United States. The premium list for this year is very full, and many of the premiums large and worthy of generous competition. The amount of prizes offered is nearly three thousand dollars, and classed as follows: Prospective prizes, $750; for gardens, greenhouses, &c., $200; for fruits, $750; for plants, flowers, and designs, $750; for floral designs at annual exhibition, $62; for vegetables, $300; total, $2812.

GUANO.—The carrying of guano has afforded employment for a large fleet of ships for several years past, and a larger number were never employed than at the present time. The opinion has been entertained that the supply of this manure would last for many years to come, but intelligent ship-masters who have been over the islands say that more than one half of the deposits have been already removed, and that at the present rate of shipment four or five years will exhaust all the guano that is accessible. At the last dates there were 135 ships, averaging 1000 tons each, at the islands, loading or waiting their turn to load.

Hints for the Year.

There is not a reading farmer in the country, says an exchange, who thinks he has attained perfection on all points. With such, there is consequently much improvement to make, and the most practical and substantially beneficial, should be undertaken first. In order to assist in this good work, the following hints are given:

Rotation.—Let the farm be suitably divided and reduced to a regular system of cotation in crops. Many spend much time and thought in determining what they shall occupy this field with, and what they shall plant in that field; and perhaps they change their minds half a dozen times in a month, and after all get their succession of crops into confusion.

We have known a farmer, who, after fully digesting the matter, and arriving at the best rotation, adopted and continued it without a variation for twenty years—all his crops, as a consequence, were heavy, and his fields continued clean. Farmers generally will arange a course to suit themselves in their own peculiar circumstances of soil, climate and markets. The following with variations, may be adopted: 1, corn and roots with the manure; 2, wheat; 3, clover, in meadow and pasture. This is a short and simple course. A larger one is—1, corn and roots; 2, barley, oats, beans or peas; 3, wheat; 4, clover for meadow and pasture, for one, two, or three years. In districts where every kind of wheat fails, rye may be substituted, or perhaps better, this year of the course may be omitted, making it—1, corn and roots; 2, barley or oats; 3, clover.

Buildings.—No farmer can carry on business satisfactorily, who is not well supplied with farm buildings. Yet some buildings are more important than others. Shelter for his animals, and cover for his tools, carts, etc., are absolutely indispensable. The waste of food, and the reduction of flesh, and loss by death, which we have known to occur with many farmers, has been enough in two years, to pay for well-constructed buildings. Implements, wagons, plows and cultivators, left exposed a year or two, will be either ruined, or so weakened by cracks, warping or decay, as to break easily, and result in a most serious loss of time in repairs, at critical periods of work. Sheltering grain, hay, and straw, are very necessary, but less so than tools and animals.

Cleanliness.—This includes, first, cleanliness of animals, and every provision should be made for preserving them free from all kinds of filth, and for clearing away manure in the most thorough and expeditious manner; for dirty animals, not excepting even pigs, do not thrive nearly so well as clean ones. Cleanliness embraces, secondly, clean fields or freedom from all kinds of noxious weeds. Some men are exceedingly sharp at a bargain with their neighbors, but allow a loss equal to ten times as much as they make by their sharpness, by the exhaustion of soil under great crops of mullen, thistles, burdocks, elders, johnswort, pig-weeds, red-root, chess, etc.

Income and Expenditure.—The farmer who would know by figures what part of his operations yields him the most profit, and by what he is losing money, must keep accurate accounts, not only of his purchases and sales, but with every crop, what it costs, and the sum it brings him—with all indirect influences on the fertility of the soil, manufacture of manure, preparation for succeeding crops, etc.

Best Markets.—It is of great importance to ascertain whether selling corn, barley and other grain, to the grain dealers directly, or feeding it and converting it into beef, pork and mutton, brings the highest price—the value of the manure made by animals being also taken into the account. This can only be ascertained by careful experiments with the best and most approved modes of feeding, in connection with accurately weighing the animals at stated times, and weighing or measuring the food, and comparing carefully the results.

Selecting Seed.—This is an affair of more importance than is generally supposed, and should be attended to as early in the season as is convenient. The selection of Spring wheat cannot be too carefully attended to, especially by those farmers who seed their fields down to grass with this grain.

Much of the foul trash which injures and disfigures our meadows is sown with seeds which have not been thoroughly cleaned. The English farmers sort out all their wheat, and many of their other seed, by hand, which, although a somewhat tedious method, might well be imitated here in many cases. It is much easier to pick over the seeds in the long winter evenings, than to eradicate the weeds when they have once taken possession of a field. As the plan of sowing grass seeds with spring grains is rapidly gaining ground, the importance of having the seeds clear of anything foul is greatly augmented, as no convenient way of destroying them can be pursued until the sward is again broken up for hoed crops.

In selecting seed-corn it is not necessary to procure the largest ears without reference to their shape and soundness; but rather to obtain those of a medium size which are sound, well filled up at the ends, and thoroughly ripe.

Seed Oats and Barley should be run through the fan-mill at least three times before they are used, which will clean them and blow out all the lighter grains.

Hot-Beds.—Not one farmer out of twenty knows what it is to have his table well supplied with early vegetables, although the cost of a hot-bed is trifling, and it can be made in a few hours at a time when the work on the farm is not very pressing. Choose a warm dry border, facing to the south or southwest, and out of the range of buildings and shade trees, so that it will have the full force of the sun's rays.

Dig a pit from one to two feet deep over which to place the frame. Make the frame of one and a quarter inch plank. The size may be from three to five feet in width, and of any desirable length. When the frame is adjusted over the pit fill it about half full of fresh horse-stable manure, which has been well kept and not exposed to the action of the weather. Put on the sashes and allow them to remain for three or four days, after which the soil can be put in from six to eight inches in depth. This must be the best mold that can be procured from the garden. The seed should not be planted for several days after the bed has been made, as there is danger of destroying the germ if seed is put over the hot manure too soon. Air should be given to the bed before it is planted.

The frame should be banked up with warm manure and soil on all sides to protect it from cold, and when the weather is unusually inclement it would be well to cover it with straw. The bed should be sprinkled with water daily until the plants appear, and when the weather is sufficiently mild the sashes can be removed to allow the entrance of fresh air, and make the plants grow strong and hardy.

Culture of Sweet Potatoes.

The sweet potato has been experimented upon in many parts of the Northern and Eastern States and found to grow pretty well, but does not quite come up to those raised in New Jersey and further south, in saccharine matter. On the sandy lands they seemed to be more at home than on clayey soils. One advantage stated is, they do not rot.

It has been thought the sweet potato could not be raised to advantage in this State, on account of light yield and inferior quality; but yet it is now cultivated successfully in some localities, and will no doubt be found a profitable and desirable crop in many places, for it would seem that we have sandy land enough, at least. Any facts recorded if too late to be of advantage this season, will be available for another.

A writer in the Homestead, gave his mode of growing this species of potato, as follows: He started his plants in a hot bed, and in about a month transplanted them. The land was rather poor and sandy. He ridged it by throwing four furrows together. He set the plants four feet apart in the rows, and manured them in the hill with a light forkfull of stable manure. Some gypsum (plaster) was applied once during the summer, and kept well cultivated. In about five months and a half from the time of transplanting, he dug them, after the frost. Forty-nine square rods of ground yielded forty bushels of potatoes. They were well ripened and considerable larger than those found in the market.

The writer remarks that he has no doubt that this crop may be doubled on the same piece of land. Some ridges thrown up were planted with sets eighteen inches apart in the row, and by weighing these he found that they equaled those that were planted four feet apart. By applying special manures such as bones and ashes, he raised one bushel from four hills. The sweet potato he says requires warm sandy land and not very rich. If it be rich they will all run too much to vines. Land that is rather thin he says is what he uses and depends upon it for his crop of sweet potatoes, as he does for his crop of water-melons.

The Chinese Sugar Cane in Connecticut.

The most satisfactory experiment with the Chinese sugar cane, is the following, reported by Mr. Giles Haley, of Groton Centre, Ct.:

"I received from Washington about a quarter of an ounce of the seed during the spring of last year. About the middle of May, I planted in hills, as with corn, six seeds in a hill in a space of about nine inches, the hills being two feet apart. It was on a side hill, southern exposure, light silicious soil; season dry and hot; space employed about eight feet by sixteen feet square. The plants were out of the ground in fifteen days, and attained in the growth of three months a pretty uniform hight of about thirteen feet, while the stalks were about one inch in diameter at the base.

About the 15th of September, when the seeds were not entirely ripe, I (fearing frost) cut two-thirds of the lot, removed the seeds and crushed in an old cider-mill with its upright corrugated wooden rollers; and from this imperfect process I obtained five gallons of juice which I evaporated to one gallon in an iron pot. The molasses I found equal to the first quality of New Orleans, well charged with sugar granules. It is of fine flavor and cooks white.

The remainder of the cane stood about twenty days longer, during which time it had experienced a severe frost, but with no visible injury. The seed had become fully ripe. I cut and proceeded as before, obtained about the same proportional quantity of molasses, but of better quality, which may have been owing to more careful manipulation.

This trial gives a result of about three hundred gallons per acre of first quality molasses. I saved seed to plant fully an acre this year. Half of my seed has been distributed among my friends, and now having faith in the experiment, I shall this year try some seeds in the forcing bed, and transplant. I shall plant in ridges not less than three feet apart, running north and south, and shall keep the plants at least six inches apart, thinning out if necessary, and transplanting such as I take up. I find the first seeds saved sprout as well as the last. I may add that I manured, slightly, my hills, from the barn-yard.

Schools for Design.—We want few things so much in this country as Schools for Design. Whether for men or women, we can't have too many of them. There should be a school for design, taught by competent instructors, in every public school. Everything we do in this country, every house we build, every church we erect, every town we survey, every park we lay out, nay, every article we make, be it a bureau, table, desk or toy, shows our want of schools for design. Our everything is ugly, as ugly as it can be; no lines of grace and beauty, no combining of the elegant with the useful. It is just the contrary in France and Germany. Not an article comes from there, no matter for how insignificant a purpose, but is full of beauty in itself. Foreign trifles are valuable not only for their use, but because they are pretty, and help to make home pleasant and life agreeable. We make clocks in Connecticut, make them by hundreds of thousands, but they are so alarmingly ugly that they give one the fidgets to have them in the house. Yet our foreign toy shops are full of the veriest trifles, which are eagerly bought up every day, at twice the cost of a clock, because they are so pretty that purchasers can't resist the temptation.—[N. Y. Express.

Substitute for Leather.—A writer in the Scientific American suggests that some preparation of hemp, made up like papier mache, might be made effectual as a substitute for sole leather; a cement of India rubber, mixed with other adhesive substances, may be employed to unite the fibres together. Sole leather is fibrous, as can be witnessed by tearing a piece of it lengthwise. Its appearance, when thus riven, is like that of oakum felted.

The Dairy.—Franklin County, Vt., is one of the best dairy counties in the United States. It appears from a statement furnished to the St. Albans Messenger, by Mr. P. G. Stone, the freight agent at that place, that there was sent to market from that station alone, during the eight months ending Dec. 1st, 1,888,793 pounds of cheese, and 1,208,614 pounds of butter—which at the rate of 20 cents per pound for butter, and 8½ cents for cheese, amount to the handsome sum of $480,490 79.

Hard Coal Ashes are well Worth Saving.

We have been accustomed to dig away the earth around the collar of our peach trees, and apply them at the rate of a bushel or two to a tree. They help keep away the peach worm, and furnish some nourishment to the tree. Others apply them with good effect to all fruit trees and shrubs.

They afford some protection to the changes of the weather. It is admitted that frost itself rarely hurts trees, but it is the sudden thawing and freezing that does the mischief. If a large pile of ashes, five or six inches in thickness, and and three or four feet in diameter, is put around the collar of a tree, and regularly off, it soon settles and freezes, and sheds rain from the trunk. If put on during the winter, at intervals, the frozen mass increases, and of course does not thaw out as soon in the spring as the surrounding earth. The budding and blossoming of the tree is retarded by this process, and the young fruit is less likely to be injured by the late frosts. This management is particularly valuable to peach trees, which blossom so early. Some of our best cultivators put large piles of sea-weed upon the frozen earth in February, for this purpose. They save the crops by this course.

An apple tree in the garden of a friend, hitherto unproductive, bore an abundant crop last year. His coal ashes were all sifted by mistake around the base of this one tree. Other causes may have had something to do with it, but we think the lime and potash from two or three tons of coal ashes furnished the aliment the tree lacked, and threw it into bearing.

One of our neighbors has for a long course of years applied all his ashes to a part of his garden used as a potato patch. Through the worst years of the rot, his potatoes yielded abundantly, and were not affected with the disease. The variety was the Mercer, which is more liable to rot than any other.—[American Agriculturist.

Keep Fruit Trees Straight.—Trees in an open exposure often acquire a leaning position from the prevailing winds. This should not be suffered beyond a certain stage of the tree. When as large as one's wrist, they should be set up erect, and, indeed, thrown into the wind at an angle of ten or fifteen degrees; in order to bring them ultimately into a straight position. This is best done by obtaining crotched limbs from the woods, eight to twelve feet long, and placing the butt end, which should be sharpened, on the ground, and the crotch end either against the trunk, immediately beneath the branching point, or against a large outer limb, if more convenient, securing it from chafing in the crotch, by a padding of straw, or litter, and setting the tree at once up to the desired angle of elevation. Loosen, also, the ground on the windward side of the root, so that it will not bind, and the work is accomplished. Let this be done when the tree begins to make its summer growth, or soon after leafing out. One season, if the tree is thrifty, will be all that is required. If, however, it be obstinate, repeat the trial another year. The remedy is sure. Even large trees, which have acquired a permanent lean, may be thrown into an erect posture, by loosening the earth at the root, and occasionally cutting off an obstinate large root, without injury to its growth, and thus be made sightly. An erect tree will be longer lived, and more fruitful than a leaning one, and not half so subject to casualty as if left to its own guidance.—[Exchange.

Introduction of California Trees.—H. Harkness, a nurseryman of Illinois, who is spending some time in California for the purpose of collecting rare and valuable seeds, writes to the Prairie Farmer, and gives some account of what he has seen. A shrub which he thinks is called *Maucenete*, is universally found. It is said to grow very near the line of perpetual snow, and ranges down to within about one thousand feet of the valleys. It is a beautiful compact, evergeen shrub, growing about ten feet high, branching from the ground like a Gueldres rose, and is often a foot in diameter at the collar; it must attain a very great age. It is a clean, beautiful summer shrub, and is said to retain r bright lively green during the winter.

Another tree he mentions is the California White Cedar, with a delicacy of foliage so peculiar to the Chinese Arborvitæ, at the same time a gigantic tree, with the graceful proportions of a spruce or Bahama fir. We hope Mr. Harkness will bring home seeds of these, and all others which he thinks may prove hardy.

The shrub which Mr. Harkness calls *Maucenete*, doubtless means our well known Manzanito.

Ground Cherries.—A year or two ago, announcement was made of a new fruit from Wisconsin, called Alkekengi, or ground cherry. The Maine Farmer states that some few persons in its State have cultivated it, and recommend it highly. It is said that it is easily raised on any soil—very prolific, a single cherry (berry) containing seed enough to raise from one to four barrels; that they are easily preserved throughout the year and valuable for making pies, puddings and preserves, and also good wine to boot. The flavor is represented as being like the strawberry and pine apple combined. The above paper thinks that if it is half as prolific and as good as represented, it is one of the most valuable acquisitions in the fruit line that has been made for many a year, and recommends a general trial of it, for the more cheap and wholesome luxuries of this kind, the more comfortable will the world be. As everything grows well in California, this new fruit, if introduced here, might be a desirable acquisition.

Grape Vines in Gardens.—Grape vines delight in being well fertilized, and will not give the best satisfaction without a dry bottom and abundance of rich soil. At the proper season, those who have trained grape vines in their gardens should examine them thoroughly, to destroy caterpiller worms while they are small. One will be found in almost every bud, rolled up in a pellet of fine wool. All the labor then spent will pay for itself. During warm, dry weather, the surface of the ground around the roots of vines should be covered with litter, to protect the tender rootlets that spread out so near the surface.

Water-proof Boots.—Apply, as much and as hot as the leather will bear, a mixture of two parts tallow and one part rosin. Then dissolve one ounce of beeswax in two ounces of spirits of turpentine, to which add a teaspoonful of ivory-black. Warm the boots when you apply the first, top and bottom; the second should be applied cold and rubbed with the hands on the uppers only. Cork soles are the best protection against cold or damp feet. They may be fixed between the outer and inner soles when the boots are made, or worn loose inside. Cork is so bad a conductor of heat, that with it in boots, the feet are warm on the coldest stone floor.

Paper from Hops.

The hop plant is indigenous in the State of Maine—that is, it is found growing wild on our swamps or low intervales. Hence, it can be, and is, easily cultivated, and good crops usually obtained. The principal use made of them is in brewing strong beer. For this purpose the seed vessels or scaly cones only, are used, after being cured and dried carefully. But the other parts of the plant, which are now usually thrown away, may be made very useful. The stems, or vines, make excellent strings or bands to bind grain, cornstalks, and the like with. A single vine will bind a sheaf of wheat as strong and tight as you can desire. In addition to this, paper can be manufactured from the stalks or vines. A Mr. A. G. Taylor, of England, has procured a patent in England, for his process of converting hop vines into paper, as follows:

Immediately after being cut up, the stalk or vine is tied up in bundles, if possible the whole length of the plant, and these bundles are immersed in water pits, similar to those employed in operating flax or hemp, or in a running stream, and are kept there until a slight fermentation ensues, sufficient to partially detach the fiber from the pithy and woody portions of the stalk. Or the stalk may be boiled in an alkaline solution, or it may be placed in a steam vat, or steam chest, and steamed, until sufficiently softened to admit of the fiber being separated from the pithy and woody matter, by squeezing the stalk in the hand. The strength of the fiber will depend much on the care used in conducting this operation.

After separation, the fiber may be again steamed and rotted, if required to be very fine, but care must be taken to keep the fiber wet until it is cleansed from gummy and resinous matters by repeated steaming and washing.

The fiber will now be in the condition of half-stuff and fit for further bleaching, for the manufacture of paper, pasteboard, etc. In some cases, it may be mixed in any desired proportion with ordinary rag pulp. In addition to making paper, the fiber thus prepared, may be used for ropes, twine, and such purposes, as the fiber of flax or hemp is used. Large quantities of hops are grown in some parts of Oxford county in this State. Why may not the vines which are now thrown away, be put to a good use?—[Maine Farmer.

And as hops can be successfully cultivated in California, why may not the vines be put to a good use here?

Asphaltum.

The county of Santa Barbara abounds in Asphaltum. There is probably enough here to load all the ships of the world and supply all Christendom for generations to come. We desire to see this mine of wealth more largely opened. To dig it up will give employment to laborers, and to transport to San Francisco and to other points the quantity of it which they really need, will require many vessels and greatly increase the business of the Southern coast.

In some of the Western States, a species of oil, termed the Breckinridge oil, is extracted from coal, which is said to burn with a clear, soft light, and to be equal to the best sperm oil for combustion. We see no good reason why oil cannot be in the same manner distilled from Asphaltum. This contains, essentially, the same properties that are contained in bituminous coal. The advantage, if there be any, is on the side of Asphaltum, since this has in its composition a larger proportion of carbon, which is the basis of combustible substances. Already Asphaltum has been successfully used for generating gas in San Francisco, and from gas to oil there is apparently but a single step. Asphaltum is, in fact, solidified petroleum, or mineral oil. In becoming solid, some of its elements may be somewhat modified, but they are not altered in any considerable degree. In many places along the coast, where veins of Asphaltum are exposed to the direct rays of the sun, this mineral oil bubbles out in considerable quantities, and for many miles may be seen floating on the ocean. It is very combustible.

In the Birman Empire, in one district, more than four hundred thousand hogsheads of petroleum are annually produced and burned in lamps, instead of oil. Mixed with earth or ashes it is used as fuel. In the scarcity of coal on this coast, and the increasing scarcity of oil, these beds of Asphaltum may become available, and be found to possess a value for practical purpose almost incalculable.—[Gazette.

[This article is now extensively used in California, and particularly in San Francisco, for pavements, etc.]

Liberal Bequest to Agriculture. — It gives us pleasure to publish the record of one bequest to Agriculture. Almost every day we hear of some donation or bequest of generous persons, who give money to some school or college, or to some missionary enterprise; but Agriculture has received but little aid in that way.

We see it stated in Hovey's Magazine, that Andre Michaux, who many years ago traveled through the United States, and was some time in Maine, studying the botanical character of our forest trees, as well as their economical uses, and who afterwards published a valuable work upon them, recently died at his residence at Vaurial, near Pontdise, in France. By his will he bequeathed to the Massachusetts Agricultural Society the sum of eight thousand dollars, for the purpose of promoting Sylvaculture (culture of forest trees), and Horticulture, and of making experiments in the growth of trees in "sandy, rocky and bog soils." It is also stated that the principal portion of the bequest is to be invested, for increase, in good farm land; cheap and productive land is to be purchased, with another portion, and the remainder to be appropriated to seeding and planting the experimental plantations.

Here is an example for some of our rich men to follow.

Agricultural Education in Ohio.—The Ohio Agricultural College, located in Cleveland, commenced its second session on the first Monday in December last. The plan of instruction consists in courses of Lectures, four daily, which are given at the regular annual session held during the winter months, continuing for twelve consecutive weeks—a season of the year when the farmer himself, or his sons can best spare time to attend. The lecturers are Prof. J. P. Kirkland, Prof. Jas. Dascomb, Prof. J. H. Fairchild, Prof. Samuel St. John, Prof. N. S. Townsend, and others. The terms for the entire course, $40, with the privilege of a second course, tuition free.

Large Calf.—A cow belonging to Mr. Benj. Packard, of East Winthrop, Maine, brought a bull-calf which weighed, when one day old, 130 pounds. So says the Maine Farmer.

Salt for Sheep.—The first thing the shepherd in Spain does, when his flocks return from the south, the summer downs, or pastures, is to give them as much salt as they will eat. Every owner allows to each thousand sheep, 2,500 pounds of salt, which they consume in about five months. They eat none in their journeys, nor are they allowed any in winter, as it is thought to produce abortion when given to ewes forward with young. This has been the custom, and it is thought to be the true reason why the Kings of Spain could never raise the price of salt to the hight it has maintained in France; for it would tempt the shepherds to stint their sheep, which it is believed, would weaken their constitutions, and deteriorate their wool. The shepherd places fifty or sixty flat stones at the distance of about five paces apart, strews salt upon each, leads the sheep slowly among them, and every one is allowed to eat it at pleasure. But when they are feeding on limestone lands, they eat no salt; and if they meet with a spot of mixed formation, they are said to partake of it in proportion as the soil is mingled with clay.—[Wool-Grower.

Asiatic Shepherd.—The difference between the European and Asiatic shepherd have often been remarked by Oriental travelers, but probably in no country are these more striking than as they presented themselves to M. Haxthausen on his road back to Tiflis. Not only were the shepherds of several flocks he passed armed to the teeth and on horseback, but even their dogs disdained the office which, in more peaceful countries, belongs to them, of driving the flock. Five or six noble hounds of a mixed breed between the greyhound and the wolf, accompanied each flock, but only for the purpose of protecting them against wild beasts. The humbler duties which fall to the lot of our sheep dogs, are performed by goats. These attend every flock of sheep, and form a ring round it in the fields. Within this they compel the sheep to remain, butting them whenever they stray, and driving them back to their proper quarters. On their return home, a stately buck goat marches proudly at the head of the flock, which follows him, with the other goats on either side. If the leader is detained behind from any cause, the next goat in age and rank instantly takes his place, and becomes the leader.

Shoeing Horses.—A writer in the Farmer's Cabinet, an English paper, describes a mode of shoeing horses different from that usually practiced in this country, which appears to be worthy of consideration. The difference consists simply in driving the nails home *before* instead of *after* twisting them off, then beat the twist down close to the hoof and file smooth, "but not deep or with a view to rasp the twist." By twisting after driving home, a *rivet* as well as a clinch is secured. Let farmers and horse-shoers think of it.

Cure for Wounds on Horses.—In answer to J. W. M., of Bristol, I think the horse has been kicked, or had a blow by some other cause, injuring the bone. If so, wash it in bitter sweet, a vine growing in swamps in the woods. If the bone is injured enough to cause the flesh to callous to the bone, it will be necessary to cut the flesh from the bone, and scrape the bone clean with a knife, or file it off with a file partly worn, and wash well in bitter sweet, and your horse will soon be well.—[F. A. Wood, in Maine Farmer.

According to the Patent Office Report, the value of our horses is $300,000,000, or three-fourths as much as that of all the horned cattle in the United States; and hence, argues Mr. Wilder (the President of the U. S. Ag. Society), the full and fair exhibition of their good points as well for speed and action as for strength and beauty, is called for at our Fairs.

Mange in Swine.—John Bonner, of Hancock, Ga., communicates the following never-failing remedy for mange, to wit: "Give the pig or hog affected (according to age) from ten to twenty grains of arsenic, twice a week for three weeks, feeding him plentifully during the time, and I warrant that he will soon shed off, and become perfectly well, fat and sleek. It will also cure the worst case of mange on any dog. I speak from experience, and there is no danger of doses of that size killing either pigs or dogs."

Gapes in Chickens.—An Ohio correspondent gives the following remedy: "Feed little or none on corn-dough—but feed plentifully on cheese made of lobbed milk or clabber, crums of wheat and corn-bread. We also keep clabber in a trough always within reach of the young chickens. This we believe has been a perfect remedy in our hands for gapes, for the past seventeen years."

Animals.—There are 140,000 animals known to man; yet we have domesticated but 43,000. In France the giraffe has produced young that flourishes. A new species of horse found in the wilds of Hindostan has been domesticated in Paris.

Furniture Polish.—The proper way to mix beeswax and turpentine for mahogany furniture which is not French polished, is to shred half an ounce of beeswax very thin and fine, and put it into such a thing as a clean blacking bottle, with a gill or quarter of a pint of spirits of turpentine; stir it well, and put it by till next day, and then stir it about well with a piece of stick; and let it stand for another day, and it will be quite fit for use, if the beeswax has been shred fine. Keep the stick in the bottle to take a little out with when you want to use it; as you must use only a very little at a time. It must on no account be melted over the fire, as it is so inflammable it would burst into a flame, and perhaps set fire to the house.

Bitter Cream.—It is generally known that cream becomes "bitter" from standing too long on the milk. This is often the case, but it not unfrequently becomes so when only allowed to remain twenty-four hours. The best preventive is to place the milk on the stove in a pan as soon as it is strained, and let it almost boil. This will not prevent the cream from rising. Milk thus partially scalded will keep much longer than otherwise. When the whole milk is to be used without skimming, it is preferable to scald it when first received from the milkman. The only exception to this plan, is when the milk will not bear heating without curdling—a circumstance not unfrequent, as those who buy city milk can abundantly testify.—[N. Y. Times.

A Nice Dish for Breakfast.—Take one egg and beat it up, add a teaspoonful of salt, pour into it about two-thirds of a pint of water, then slice some bread, dip it in, and fry in a little butter. Serve warm, and you will find it an excellent dish.

Lemon juice is principally relied on by the physicians in London for curing rheumatism. Three table-spoonsful per day is a dose for a man.

Miscellany.

"Do They Miss Me at Home."

How often does the lone heart hear these words as they come gushing up from their own garnered memories, while they sit silent thinking of the "loved ones at home." How many, even now, may feel that they are but wanderers in a strange land, and all they love are distant, far away—and there rises in fond remembrance early days, childhood's home, mature years, manhood, father, mother, brother and sister, and often wife and children; and they look over the past as a traveler looks back, from an eminence now reached, to the long, lone road he has traveled, and, perhaps, may look forward to a still long and lonely road yet to travel before he comes to that goal of his wishes he espies far, far away, in the dim distance.

"Do they miss me at home? Do they miss me?"
The heart in its loneliness cries;
For I would be missed, and missed only,
By the few, the few that I prize."

There is a luxury in knowing that we are remembered by those that we love, and those that love us. It adds to life; it makes life worth possessing; it gives to it a newer and higher conception of it, and while we are absent from those we love, every effort we make for their happiness but increases our own.

Californians have endured much by separation from loved ones—history can never parallel it. In this truth the very reality of what has been endured can never be recorded but by the finger of Him, whose records will be opened before a world. But shall we do all we can to make those we love happy? happy in our absence? Then we should show them our *true* condition; show to those we love how we are situated; make known to parents, wives, children and friends the blessings we enjoy, and this will add to theirs; and while absent from those who are distant from us, how can we do so better than by furnishing them a record of ourselves, our homes, and our prospects—thus proving we feel their absence, and mourn it. In these columns we can weekly communicate to loved ones that which shall cheer them, and be a source of pleasure and comfort to them, till we can welcome them to our homes. To this result we urge all who love the absent ones, and we bid all send these messages—these, your thoughts—and they, in return, will communicate to you theirs.

Though seas and oceans between us roll,
The loved and true are united in soul.

The Mistake.

Eight years had passed. It was summer time again, and the hills were green, and the fields were yellow with her glory. It was in the morning, and Deacon Grant sat under the porch of the great, old, rambling cottage; for the day was very warm, and the top was wrapped round thickly with a hop-vine.

These eight years had greatly changed the deacon. He seemed to have stepped very suddenly into old age, and the light wind that stirred the green leaves, shook the gray hairs over his wrinkled forehead, as he sat there, reading the village newspaper, with eyes that had begun to grow dim.

And every little while, fragments of some old-fashioned tune floated out to the old man, soft, sweet, stray fragments; and flitting back and forth from the pantry to the breakfast table was a young girl, not handsome, but with a sweet, frank, rosy countenance, whose smiles seemed to hover naturally as sunshine over June skies.

She wore a pink calico dress, the sleeves tucked above her elbows, and a "checked apron." Altogether, she was a fair, plump, healthful-looking country girl.

And while the old man read the paper under the hop-vine, and the young girl hummed and fluttered between the pantry and the kitchen table, a young man opened the small, front gate, and went up the narrow path to the house.

He went up very slowly, staring all about him, with an eager, wistful look, and sometimes the muscles of his mouth worked and quivered, as one's will when strong emotions are shaking the heart.

He had a firm, sinewy frame, of middling hight; he was not handsome, but there was something in his face you would have liked; perhaps it was the light away down in the dark eyes; perhaps it was the strength and character foreshadowed in the lines about the mouth. I cannot tell; it was as untangible as it was certain you would have liked that face.

The door was open, and the young man walked into the wide hall. He stood still a moment, staring round the low wall, and on the palm-leaved paper that covered the side. Then a thick mist broke into his eyes, and he walked on like one in a dream, apparently quite forgetful that this was not his own home.

I think those low, sweet fragments of song unconsciously drew his steps to the kitchen, for a few moments later, he stood in the doorway, watching that fair girl as she removed the small rolls of yellow butter from a wooden box to an earthen plate. I can hardly transcribe the expression of the man's face. It was one of mingled doubt, surprise, eagerness, that, at last, all converged into one of joyful certainty.

"Merciful man!" The words broke from the girl's lips, and the last roll of butter fell from the little hands, as, looking up, she saw the stranger standing in the doorway; and her rosy cheeks actually turned pale with the start of surprise.

The exclamation seemed to recall the young man to himself. He removed his hat. "Excuse me," he said, with a bow of instinctive grace, "but can you tell me, ma'am, if Deacon Grant resides here?"

"Oh! yes, sir; will you walk into the parlor and take a seat? Uncle, here is a gentleman who wishes to see you." And, in a flutter of embarrassment, she hurried towards the door.

The gentleman did not stir, and, removing his silver spectacles, the deacon came in; and the two men looked at each other, the older with some surprise, and a good deal of curiosity in his face; the younger with a strange, longing eagerness in his dark eyes that seemed wholly unaccountable.

"Do you know me, sir?" he asked, after a moment's silence, and there was a shaking in his voice.

"I do not know that I ever had the pleasure of meeting you before, sir," said the deacon.

But here a change came over the face of the girl, who had been watching the stranger intently all the time. A light, the light of a long-buried recollection seemed to break up from her heart into her face. Her breath came gaspingly between her parted lips, her dilated eyes were fastened on the stranger; then, with a quick cry, she sprang forward. "Uncle, it is Ellsworth! it is surely Ellsworth!"

Oh! if you had seen that old man then! His cheeks turned ashen pale, his frame shivered; he tottered a few steps forward, and then the great, wild cry of his heart broke out—"Is it you, my boy, Ellsworth?"

"It is I, father; are you glad to see me?" And that strong man asked the question with a sob, and a timid voice like that of a little child.

"Come to me! come to me, my boy, that I thought was dead, that I have seen every night for the last eight years, lying with the dark eyes of his mother under the white waves. Oh! Ellsworth, God has sent you from the dead! Come to me, my boy!"

And the old man drew his arms round his son's neck, and leaned his gray head on his strong breast, and for a while there was no word spoken between them.

"You have forgiven me, father?" asked the young man at last.

"Do not ask me that, my boy. How many times I would have given everything I possessed on earth to ask 'Forgive me, Ellsworth?' and to hear you answer, 'Yes, father!'"

So there was peace between those two, such peace as the angels who walk up and down the hills, crowned with the royal purple of eternity, tune their harps over!

"And this—this is Nellie? How she has altered! But I knew the voice," said Ellsworth, at last, as he took the girl's hands in his own, and kissed her wet cheeks, adding very tenderly: "My darling sister, Nellie." And at last they all went out under the cool shade of the hop-vine, and there Ellsworth told his story.

The merchantman in which he had sailed from home was wrecked, and many on board perished; but some of the sailors constructed a raft, on which the boy was saved, with several others. They were afterwards rescued by a vessel bound for South America. Here Ellsworth had obtained a situation in a large mercantile establishment, first as a clerk, afterwards as junior partner.

He had written home twice, but the letters had been lost or miscarried. As he received no answer, he supposed his father had never forgiven him for "running away," and tried to reconcile himself to the estrangement.

But he had, of late, found it very difficult to do this, and, at last, he had resolved to return to his home, have an interview with his parent, and try whether the sight of his long absent son would not soften his heart.

Oh! it was a happy trio that sat under the green leaves of the hop-vine that summer morning. It was a happy trio that sat down in that low, old-fashioned kitchen, to the delicious dinner of chicken and fresh peas, that Nelly had been so long in preparing.

And that night three very happy people knelt in the old sitting-room, while the trembling voice of the old deacon thanked God for him that was dead and "alive again."

—

Another year went by, and one bright summer morning the old gray church on the green was opened, and crowded with curious, smiling faces.

Suddenly there came a hush over all the rustle of eagerness and expectancy, for Ellsworth Grant and Ellen passed up the aisle, he looking very manly and happy, and she very shy and fair in her white bridal robes.

So they stood together at the altar, and said to each other those most solemn, most beautiful words that man and woman ever have or ever will say to each other—"Till death us do part."

And behind them stood an old man with gray hairs and wrinkled face, about whom the people gathered with congratulations as soon as the newly married pair had left the church. And the old man rubbed his hands, and a smile, very beaming, very full of "perfect peace," went over his face as he said:

"God has dealt very kindly with me. He sent my boy home to me, and now he has given me *two* children.—[Arthur's Magazine.

Precept and Example.

"Thou shalt love thy neighbor as thyself." "As ye would that men should do unto you, do ye even so to them." "Peace on earth and good will to men." The following triune illustrations of the principles that will bring about that happy period when these three great teachings will be obeyed are most happy; would they could always be thus exemplified:

There is Another Man.—During a heavy storm off the coast of Spain, a dismasted merchantman was observed by a British frigate drifting before the gale. Every eye and glass were on her, and a canvas shelter on deck suggested the idea that there might yet be life on board. The order instantly sounds to put the ship about, and presently a boat puts off to the wreck. They reach it; they shout, and now a strange object rolls out of that canvas screen against the lee shroud of a broken mast. Handed into the boat, it proves to be the body of a man, bent head and knees together, and so light that a mere boy lifted it on board. It is laid on the deck; in horror and pity the crew gather about it—it shows signs of life—they draw nearer—it moves, and then mutters in a deep, sepulchral voice, "*There is another man!*" Saved himself, the first use the saved one made of speech was to seek to save another! Oh, learn that blessed lesson! Be daily practicing it.

JUDGE NOT THY NEIGHBOR.

What are another's faults to me?
I've not a vulture's bill
To pick at every flaw I see,
And make it wider still.
It is enough for me to know
I've follies of my own,
And on my heart the care bestow,
And let my friends alone.

Happy Mary.—She moved about the house like a sunbeam. I heard her singing as she passed to and fro, and her mother heard her too, and said, with a fond smile,

"It is Mary! She is always the same, always happy. I do not know what I would do without her."

"I do not know what any of us would do without Mary," repeated her eldest daughter, and the rest echoed her words.

Her youngest brother is of a violent temper, and is always quarreling with somebody; but he never quarrels with Mary because she will not quarrel with him, but strives to turn aside his anger by gentle words. Even her very presence has an influence over him.

Mirth is like a flash of lightning, that breaks through a gleam of clouds, and glitters for a moment; cheerfulness keeps a kind of daylight in the mind, and fills it with a steady and perpetual serenity.

Excellent.

The following good hit at the foolish manner of spelling many of the words in our language we quote from the Wisconsin Farmer:

Phonetics versus Potatoes.—Professor Carr says, "science is the economy of time;" Paul the aged, that "It is incumbent for christians to exercise the senses," and Professor Johnson, the agricultural chemist, that "the farmer wants to raise the greatest amount of crop at the least expense, and the least injury to the soil." Now all these culminate in phonetics. Yea, godliness is profitable for all things; therefore, it must be profitable for raising potatoes.

The ancient record enjoins every one "to write very plainly," but instead of practicing this injunction, our orthography bears indubitable marks of being concocted in pandemonium. Many of the words have several letters of falsehood prefixed or affixed, as, ph, w, k, and g, before phthsic, wrong, knee, gnat, and e, ugh, rh, and s, after have, forlough, myrrh, and miss. Such is the ambiguity of spelling that there are not ten words in the ten commandments spelled agreeably to common sense, and not fifty in the 50,000 which compose the English language. With some it would appear that the chief end of man's creation was to get his spellings. Now, if we had natural spelling as the ancient Babylonians, Hebrews, and Greeks, and the modern Hollanders, we might save a considerable item of time, to be devoted to the cultivation of the potato; but that is not all; the necessities of the age have devised a system of writing by which a simple geometrical sign represents a simple sound, instead of the old system, which sometimes uses ten, and the word *though*, which is composed of two sounds, is represented by thirty-four efforts of the hand. Taking it all in all, it can be written six times quicker than the old; and thousands of such letters are constantly passing through the Post-Office. Let it be brought into general use, and five-sixths of the latter-writing time can be given to hoe potatoes, or study the science of agricultural chemistry as applied to the raising of potatoes. Men in earnest will leave no stone unturned to gain their object.

Power Press Printing in this City.—The public will be somewhat surprised to learn that there is in this city one of the largest steam printing establishments in the United States—in fact the largest, if we except some few in the city of New York. The reason of this is that nearly all the newspaper owners now find it cheaper to let out the printing of their papers than to do it themselves, for the cost of an improved power printing-press is great, and expense of keeping it merely to print one paper is nearly as much as if it were kept running all the time. Hence most of the proprietors, while they compose their own types, let out the printing of their papers. The establishment to which we allude is that of Messrs. Blake & Moffit, on Merchant street, just west of Washington Market. They have three of Hoe's improved double-cylinder Napier presses, one large Adams' power press for book work, one large Napier press of Taylor's patent, and have another large press ready to be put up when they can find room for it. The number of papers printed altogether, daily, about equals that of one of the leading dailies in New York. Their capacity for printing, however, is enormous, being able to print 350,000 impressions, being more than twice the circulation of all the papers in the State. One press alone throws off 6000 sheets per hour. Two men are constantly employed carrying forms from the different offices to the press-room. The amount of paper and ink consumed weekly is very large, and the expense of running the presses, without the cost of the paper (which is furnished by each office), is over four hundred dollars per week. These presses are run by an eight-horse power engine, which also pumps daily, for the use of the concern, some 8000 gallons of water from an Artesian well. They at present work off some eighteen different papers, which are printed in English, French, German, Spanish and Chinese, and embrace nearly all the religious and political doctrines extant. Some sixty news-carriers center there daily, whence they diverge and spread themselves through every street, alley, place and by-path of the town, till they are stopped by the bay on the east and the coast range on the west. For the information of the curious, we would state that Mr. John Glennon, the foreman of the establishment, appears to take pleasure in showing to strangers the workings of the printing machines.—[Herald.

Never say Die.—If you can't succeed at one business, try another. If you fail as a cobbler, enter yourself as a member of Congress. In short, do anything but take to despair. When Monsieur Jollie presented his picture of "Moses crossing the Red Sea," the curate of the Louvre threatened to kick it out doors. Did that dishearten him? Not at all. He went home, added a little chrome yellow to it, gave it a new name, "Cæsar crossing the Rubicon," and sold it in less than a month to the same curate for ten thousand francs. Here we see the advantage of "never giving up." Had Monsieur Jollie been like most men, the insult he first met with on the first going round to "the National Gallery," would have resulted in a shilling's worth of prussic acid. But he wasn't like most men, and the consequence is he has become a lion of the first magnitude. When similarly situated, "go thou and do likewise."

Arab Proverbs.—If your friend is made of honey, do not eat him all up. If you travel through the country of the blind, be blind yourself. When you are the anvil, have patience; when you are the hammer, strike straight and well. He who cannot take a hint, cannot comprehend a long explanation. The mother of a murdered man may sleep, but the mother of the murderer cannot. I like the head of a dog better than the tail of a lion. Take counsel of one greater, and one less than yourself, and afterwards form your own opinion.—[Algeria in 1845.

What is Life?—The mere lapse of years is not life. To eat, drink, and sleep; to be exposed to darkness and light; to pace around in the mill of habits and turn the wheel of wealth, to make reason our book-keeper, and thought into an implement of trade—this is not life. In all this but a poor fraction of the unconsciousness of humanity is awakened; and the sanctities still slumber which make it worth while to be. Knowledge, truth, love, beauty, goodness, faith, alone can give vitality to the mechanism of existence; the laugh of mirth which vibrates through the heart; the tear which freshens the dry waste within; the music that brings childhood back; the prayer that calls the future near; the death which startles us with mystery; the hardship which forces us to struggle; the anxiety that ends in trust—are the true nourishment which ends in being.—[Chalmers.

HORTICULTURAL.

Commercial Nursery,
Three-Quarters of a Mile East of the City of San Jose.

THE Proprietors of this Nursery, having received the award of the
FIRST PREMIUM
OF THE
STATE SOCIETY
the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of
FRUIT AND ORNAMENTAL TREES,
For the Trade of 1856 and 1857,
that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.

Our Stock consists of

One Hundred Thousand Trees,
FROM FOUR TO ELEVEN FEET IN HIGHT.

Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;
TOGETHER WITH
Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.

Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.

Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.

Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.

Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.

☞ Our Agents are as follows: Leconnt & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.

All communications addressed to the subscribers will receive prompt attention.

v7-1 3m SMITH & WINCHELL.

Smith's Pomological Gardens
AND
NURSERY.
On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast. Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Allanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

*** Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ **J. F. SWIFT,** No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.

v6-19 3m A. P. S.

San Jose Nursery.

THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of

FRUIT AND ORNAMENTAL TREES,
ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.

Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 69 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.

The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer
Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.
In each of the above the very best and most approved varieties.
The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—
Black and Honey Locust;
Chinese Allanthus, Catalpas.

—Also,—

20,000 Mulberry Trees,

All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.

ROSES! ROSES!! ROSES!!!

In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 96 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.

The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.

Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.

PACIFIC MUSEUM,
Corner of Clay and Kearny streets.
INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!

THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Wolf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.

Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montes.

☞ A full Brass Band is in attendance every evening. Open every day and evening (Sundays excepted).

*** Admission 25 cents during the Day, and 50 cents in the Evening. v7-2

PROSPECTUS
OF VOLUME VII.
OF THE
CALIFORNIA FARMER.

THE CALIFORNIA FARMER was established in January, 1854; its success was a problem that the future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the virgin soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer Farmer expected to meet with obstructions, trials and difficulties, that would try our strength and temper too. But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he must meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—so our humble selves in the enterprise of the journal we then presented, we had faith—we were willing and ready to labor and toil—to do and to suffer—confident that ere long the goodness of the cause we had espoused, its happy and beneficial influences, with dignity, nobility, and prosperity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good—to them we and our cause are known—our desert at their hands is manifest.

To those who are strangers to us and the journal we publish, we again present the California Farmer.

Our journal is devoted to Agriculture and all the useful sciences—it will ever be our aim to have the Farmer the true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the true friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Homes of our glorious State. Free from every political, sectarian, or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that our means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication, we have access to facilities for information rarely obtained.

In the department of Education, of Home Influences, we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artisans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall esteem most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it in comparison, and abide the issue.

With grateful acknowledgments for a generous sustaining in years of trial, and with the assurance to our patrons of many improvements in the opening year, we ask their continued favor and generous influence for this journal.

The terms of the Farmer are, for the year (always in advance), $5.

Offices of Publication—130 Washington street, San Francisco, and State Society's Rooms, Fourth street, Sacramento.

WARREN & CO., Editors and Publishers.

January, 1857. 1t

The California Farmer.

SAN FRANCISCO, FRIDAY, MAY 1, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

Sheep Statistics.

In our travels up the Suisun Valley the last week, we met a very large flock of fine Sheep, numbering about three thousand. Upon inquiry we learned they were on their way to the ranch of our distinguished artist, R. H. Vance, at Barkerville; a finer lot of sheep of the native stock, we have not seen lately. We should have been pleased to have seen Mr. Vance near his flock, and with his instrument, for in this beautiful valley, surrounded with the majestic oaks, a flock of sheep browsing among the trees would have made a splendid picture. We hope our friend Vance will realize a fortune from his flock.

Prolific.—We met with a raiser of sheep on our way across the Suisun Valley, who commenced sheep-raising about one year ago; the flock at this time, numbers from sixteen to eighteen hundred.

Another sheep-grower informs us, that he purchased a flock of one thousand sheep; the number has increased largely, and he estimates that in sixty days he will have two hundred lambs ready for market as mutton. These, with the spring crop of wool, will net him fifteen hundred dollars—then leaving him a flock numbering thirteen hundred. The following is but a just estimate of his gain in six months:

An increase of 33⅓ in the value of the flock, and a dividend of 33⅓ per cent beside, all in six months; and this on an investment of five thousand dollars. Who says this is not a glorious farming country!

Great Shearing of Wool.—The wool from the splendid sheep of Messrs. Searle & Wynn, which was sheared on the 10th of April last, weighed as follows: The ram Sampson gave a fleece of 15¼ pounds; Napoleon gave 14½ pounds; the ewe Mattie gave 8 pounds—and the fleece was of the finest order. Both ewes gave buck lambs. The fleece of these sheep may be seen at Messrs. Searle & Wynn's.

Marble Quarries of Suisun.

There are several very valuable Marble Quarries in Suisun Valley. We visited the principal one, now being worked under the direction of Mr. Batchelder, and known as the Fay Company Quarry. It is situated upon a high hill some four miles from Suisun city, and on a good road to the embarcadero. The entire hill abounds with the best of limestone, which is being converted into lime, finding a ready sale. The marble is of the richest kind, the same as the mantle-pieces and work made for the official residences at Mare Island—nothing could be more perfectly beautiful.

Another Marble Quarry is in the mountain hills of Suisun. This marble is said to be susceptible of a high polish, and will be saved for Daguerrean plates, and can be made of very great beauty. This quarry is now owned by *four Judges*, and contains veins of rare marble; and in the vicinity for two miles around these quarries, there abound numerous springs of every medicinal character, which are now esteemed of great value. As this quarry never had a name, we shall give it the name of the *Court Marble Quarry*, as it is owned by four Judges.

Hutchings' California Magazine.—The May number of this popular monthly comes to us with a welcome. The view of Mount Shasta, and the spirited sketch of its ascent by Rev. I. S. Diehl, well repays the purchaser. The view of the head of the Sacramento valley and the article accompanying, will also prove highly interesting to the lover of the bold and beautiful scenery on this majestic river. A sketch by Alice, with an illustration, will also arrest and please the reader, as her essays always do. The lovers of the merry, the sentimental and the substantial can all find something to suit their several tastes in this sprightly little monthly.

Mechanics' Liens.—The Supreme Court, in affirming the decision of the lower court in the case of Tuttle *vs.* Montford, in which the defendant, under judgment upon garnishment, before a Justice of the Peace, paid over on the attachment a sum of money due upon a building, upon which a mechanic's lien had been filed, subsequent to the attachment, but within the time allowed by the statute, held, that although the conflicting claims might be both just and proper, that of the mechanic, artisan or material man is more equitable and more favored by law, and must be preferred, although in point of time subsequently laid.

California Central Railroad Company.—The Marysville Express states, that the above named Railroad Company, the object of which is to connect by railroad Marysville and San Francisco, has been thoroughly organized. Col. Ed. Woodruff is President; John C. Fall, Vice President; and J. A. Paxton, Secretary and Treasurer. The Directors are the same gentlemen, with two others added, viz: Col. Ira A. Eaton, and Dr. I. S. Watts. All, we believe, are wealthy men, and we know them to be gentlemen of the first respectability in the State.

Arrivals.—Among the arrivals by the Golden Gate, we notice, is Brevet Brig. Gen. N. S. Clarke, Commandant of the Pacific Division; Hon. D. C. Broderick, Hon. Frank Tilford, Col. Inge, Capt. Dennison, Geo. H. Hossefros, Chas. K. Smith, H. Wheelock, Major Caperton, Purser Welsh, and many other old Californians.

Superior Court Abolished.—Yesterday closed the existence of the Superior Court of San Francisco. By act of the Legislature, the Court was to be abolished on the 30th of April. All unfinished business will be transferred to the Fourth District Court. Judge Shattuck retires with the respect of all.

The Trip up the Sacramento.

Travelers at the East always boast of the beautiful scenery along the banks of the Hudson, and they can do so with good reason, for it is indeed beautiful; and we Californians can also boast of scenery as beautiful, if we would but realize it: but we are so blinded by the pursuit of gold that nature has but few charms for the seekers of mammon.

As we promised to tell our readers what we saw that was worthy of note in our late trip, we shall endeavor to be brief; but try to interest them and to awaken in them a desire to become as interested as ourselves in those matters which tend to make more permanent the institutions, and, consequently, the prosperity of our State at large.

Our trip from Sacramento to Marysville was made pleasant and agreeable by the courtesy of the commander of the "Young America," Col. Haight, and the gentlemanly clerk. The scenery along the Sacramento is always pleasant and full of associations of interest, connected as it is with the history of the past—Vernon, Nicholaus, Eliza, Plumas—all once great cities, where fortunes were made—(on paper). Those noted land marks awaken thought; and Hock Farm, this memorable spot will always excite the liveliest emotions in the traveler as he passes the home of the noble pioneer. But we pass on and arrive at the city once at the head of navigation.

In spite of the lull in business, Marysville is steadily improving. The warehouses of her merchants are full of goods, and there is a lively and cheerful look about the business men that indicates health and contentment. Many new buildings are being erected as business places, and many more as beautiful residences. Marysville is doing much to beautify homes. In this we have hope, for when a home is established, men have then an endorser that they have something to live for and labor for, and a guaranty that they work to build up and defend. There are many very beautiful private residences and gardens in and around Marysville that are an ornament and an honor to the city.

From Marysville we took private carriage to examine the country along the banks of Feather river, and the towns adjacent. That whole extent of country above appears to be one great alluvial deposit, and, for richness of soil, unsurpassed. Notwithstanding the many difficulties which have tended to prevent improvement, yet the whole country is now steadily progressing. A short stop at the Horn Cut House, kept by Mr. Lowry, gave us a very favorable opinion of an enterprising landlord, who is deserving of success. After a very pleasant ride of a very beautiful day, in the company of an excellent friend, we arrived at the famous town of Oroville, now the head of navigation on the Plumas (Feather) river, and took up our "headquarters" at that pattern hotel the St. Nicholas, where Frank Johnson always makes his friends feel that they are at home.

California, from the first discovery of the gold mines, has been celebrated for the rapidity with which her cities and towns have sprung into being, and become populous and mighty in their influence. Among those of early date, after the wonderful progress of the Bay City, came Sacramento, Marysville, Stockton, and a host of lesser ones. Some of them, once named, have, like the comet that excites for a while, passed away, and the world moves on as before (as will be the result of the approaching comet of June 13th). Among the cities that have risen of late years none have excited so much astonishment, none, even of former years, have risen more rapidly, none more surely, none upon a better foundation than the city of Oroville, of which we would now give a brief sketch.

Oroville was scarcely known two years since. Even now, her population, her business, her influence, and her capacities are but little understood by the people of this State, outside of those places where the influence of her trade is felt; and yet she is rising rapidly, surely and with certainty, and, we believe, if no untoward event occurs, she is destined to take rank soon as the third city of our State.

Oroville, we believe, is the only mining city or locality in the world to which there is a steam communication. Here, the steamer comes whistling her way to the very sluice-boxes, and her hawsers that hold her to the banks of the roaring Plumas lay across the machinery of the hardy miner. Oroville, too, is rich, very rich, in her golden sands, and the whole extent of country around her is, not like the bonnie lakes of Scotland, "one sea of burnished gold," but one vast golden prairie; and her acres of golden sand shall make Oroville one of the most prospered cities of our fair Eureka State.

We like Oroville much; we like her for her industry, for her working men. We like Oroville because we think we see, in her beginning, so much that speaks of her certain permanency. The gold of her hills and river beds, the gold that is crushed from her sparkling roads is *not* all carried away to enrich other States, or other sections of country; it is used *to build up Oroville*. The gold of Oroville, which God Almighty placed there, in that vicinity, *is used there*, as we think He intended it, to build homes, school-houses, churches, workshops, stores, farms and gardens, and to improve the country around; and when we see these plans being carried out we feel sure that such a place must become permanent and prosperous. We spent much time in noting these facts—that the owners of gold claims, and other property, as business men, were building and beautifying homes, and becoming interested in all that appertains to the certain growth and permanency of the city of their adoption. We gather the following important facts, in relation to the form of government, and plans of the citizens for the prosperity and safety of their city. We may not be correct in every particular, but these are the principal features:

The principal officers of their government, and recently elected, serve the city free of cost—no salaries. The debt of the city can never exceed *one hundred cents*. Her police is very strong; one hundred men, all volunteers—and these must all be, either owners or occupiers of dwellings, stores, shops, or married men. They must have some indorser that they have something at stake, to make them vigilant, and this police are all volunteers, save the chief, whose whole time, day and night, is required in service. Good attention is paid to public improvements, and the citizens readily subscribe and pay for them according to the value they receive.

A good Hook and Ladder Company was formed, and paraded on Saturday before the late fire; and it is a singular fact, that they formed and paraded in their handsome dress directly in front of the buildings that were destroyed by the fire, and there they were finely daguerreotyped by George B. Hendie, an excellent artist, who has the picture, and we should think every member of that company and every citizen would wish a copy of it to preserve as a memento of that company and the event, for to this admirable company and their untiring efforts, aided by the miners and citizens, that city was saved from destruction.

Schools are enlisting the attention of the citizens of Oroville, and we learn with pleasure of the interest felt for them. A good school under the care of Mr. Chinn and Miss Webb is doing well. To Messrs. Ritchie, Downer & Morris the citizens are indebted for noble efforts in the cause of education.

The Sabbath is well observed; miners and laborers rest; services at church are well attended, and quiet reigns at Oroville on the Sabbath.

The homes of Oroville are being made attractive and beautiful, and we could not but admire this feature in the city—they beautify their homes. We rode around the city to note these facts.

Sheriff Freer, whose large and fine garden was first commenced, was a stimulus to many—it was a noble example. Mr. Freer occupies an entire square, and his grounds are laid out with taste, and planted with the best of fruit trees and the choicest of flowers. We were pleased with the excellent taste and manner of cultivation. The cultivation of roses, camellias, etc., under the especial care of Mrs. Freer, showed the taste and skill of a connoisseur florist. We noted also the fine residences of the citizens—Saxton, Morse, Harris, Kretzinger, Granger, Lot, and many others, whose laudable efforts all tend to make Oroville beautiful and prosperous.

The Press, too, of Oroville, are not idle. The editors of both papers personally, and by the example and tone of their journals, aid on in the work. We had a neighborly call at each office—the Butte Record and Californian—and found editors and typos busy at their posts, and we wish them success. Work on, brothers, and make Oroville what it should be—what it can be—the third city of California.

Stock Raising.

Messrs Editors: It is with mingled feelings of *pleasure* and *regret* that I announce that I am no longer a Short-horn breeder. My residence being permanently fixed at Mount Fordham, it was impossible to carry on very pleasantly the occupation at Herdsdale (twelve miles distant), and the only *regret* I feel (independent of my pleasure with the animals) is that I shall disappoint those who wanted a few of them, and lose to a certain extent a continuance of the numerous and pleasant acquaintance which I have formed. Having purchased the entire herd of the late Mr. Becar, and prepared the manuscript for my Catalogue of 1857, I was solicited by Mr. Thorne of Thornedale, to let him look at it previous to its going to press, which resulted in the highest priced sale ever made in this country or England, *not excepting* those of the Collings and Earl Ducie.

The *pleasure* I feel is that so many valuable strains of blood are now to be united on one farm, and if judiciously managed (which I have no doubt they will be), more good will be secured to the country at large, by keeping them together for a term of years longer, than if they were now distributed far and wide.

I have wound up my career as a breeder, with a reasonable pecuniary profit, and a synopsis of the sale will be published shortly.

With many thanks for the liberal support of the community for years, and their frequent expressions of confidence in my having done some good, which I hope and believe will be realized, as the seeds or strains of blood of various kinds of animals so diffused, will continue to yield a profitable return to the country.

I remain yours, with great respect and esteem,

L. G. Morris.

Mount Fordham, March, 1857.

Newspapers and Periodicals.—We return thanks to J. H. Still & Co., No. 120 Washington-street, N. E. corner of Sansome, for copies of N. O. Delta, N. Y. Ledger, Ledger of Romance, Irish News, Porter's Spirit of the Times, Harper's Weekly, N. Y. Sunday Papers, Boston Investigator, London Weekly Times, etc.,—a full supply of which can be had at their New Periodical and Newspaper Depot.

The New Steamship Line.—Stock in this new and important enterprise—the California and New York Steamship Company—is rapidly taken up, and the project is evidently hastening to a speedy and successful completion.

Evening Ledger.—This is the title of a new daily evening paper, which appeared last Monday. Porter & Co., publishers.

From Carson Valley.

A telegraphic dispatch to the Sacramento Bee, gives the following:

The San Andreas Independent issued an extra yesterday morning, containing late news from Carson Valley. From it we learn that Mr. L. W. Noyes arrived at that place this morning, from Carson Valley, which place he left on Monday. Mr. Thompson, the Expressman, is on his way, as he was to start the next day with several others via the Big Tree route.

The citizens of Carson county met at Genoa, on the 25th April, to consider and adopt the most feasible route between Carson Valley and California. After considerable speechifying, adoption of no account resolutions, etc., the meeting adjourned till May 16th, to receive reports of delegates.

On the 17th of April, two distinct shocks of an earthquake were felt at Gold Canyon, twenty-five miles from Mormon Station. The shocks were heaviest at the head of the Canyon, where are a number of Indian camps, and created great consternation among the natives. The phenomena took a course from northwest to southeast, shaking in its course the cabins of miners and traders, stopping the water in many of the ditches, causing some of them to cave in, and doing other damage to a considerable extent.

In Gold Canyon, the Mormons have been making, at mining, from $3 to $5 per day all through the winter, but water is getting scarce there now. Flour at the Valley is worth from $16 to $20 per hundred pounds. Barley 5 cents per pound. Bacon 40 cents; Sugar 40 cents; Coffee 45 cents; Tea $3 per pound.

The emigrants who wintered at Salt Lake are expected at Carson about the 1st of June, with several large droves of stock. Ragtown was destroyed by fire on the 14th of April.

The Mormons and Gentiles are dwelling together in perfect peace in Carson Valley.

From the Sandwich Islands.—By the arrival of the bark Fanny Major, Capt. Lawton, we are in receipt of files of the Pacific Commercial Advertiser to April 9th, and the Polynesian to March 28th. We make up the following summary of news from the Advertiser:

The people of Honolulu have been mystified by the arrival of the schooner Gen. Morgan from this port, with every vestige of news carefully suppressed.

A form book is being published in Honolulu in the native language, by J. W. H. Kauwahi.

A severe thunder storm visited Wailuku the last of March, lasting several days, and forcing a total suspension of business.

The Islands produce from seven to eight hundred tons of sugar annually. The wheat crop is up some fifteen inches, and promises well.

A line from Mr. Parker, of Hamakua, Hawaii, informs us that the severest earthquake ever yet felt on that island, occurred on the 24th of March, at twenty minutes past 12 M.

Another schooner has sailed for the recently annexed Island some 100 miles from the Hawaiian group, for a cargo of guano and eggs.

A difficulty has occurred between the Judges and Alexander Campbell, Esq., the latter having been expelled from practice at the bar on the ground of having written an insulting letter to one of the Judges.

Chief Justice Lee had returned after a three months cruise, not much better in health.

Fourteen vessels in all 3,027 tons, have been fitted out at the Islands since January 1st.

A curious specimen of the lobster or craw-fish tribe was brought up on Monday last by the dipper of the dredge machine. The difference from the common fish consisted in his being armed with a number of long points, which he used freely in self-defense. They appear to be designed for killing such small animals or fish as may fall a prey to it.

Lahaina boasts half a dozen mammoth sugar beets, all about the same size, measuring 18 inches in length and 22 inches around; flat Dutch turnips, 24 inches around; some superb Savoy cabbages, 30 around the head.

Latest News from Kern River.—The latest advices from Kern river, as we learn from the Mariposa Democrat, represent that all was quiet in Tulare county, the Indians now being all peaceable. The miners on Kern River and vicinity are all doing well, and some of them making large wages. On the White River, 20 miles north of Kern River, extensive quartz veins have recently been discovered, which are exceedingly rich. Considerable excitement had been caused by the discovery, and many were abandoning other diggings to repair to the new locality. On the San Joaquin, eight miles above Fort Miller, some quartz veins that had been worked three or four years since and abandoned, have recently undergone new prospecting and prove rich, the quartz taken out yielding from $40 up to $200 a ton. A number of arastras have been put up, and the miners down there are "pitching in" with renewed encouragement. The country is suffering severely for want of rain.

The Stockton Argus, in giving the latest news from Kern River, says that immigration is pouring into Tulare Valley to a greater extent than ever heretofore, many of the settlers being from the San Jose Valley, and a still larger portion being direct from the Western States. The crops generally present a very unfavorable prospect, owing to the absence of rain. The quantity of grain sown the present season is less than that of last year. Farmers are turning their attention to irrigating by means of ditches, in anticipation of sowing a large tract of land next year. The crops on the Indian Reservation on King's river, of which there are about 200 acres, present a very favorable prospect for a good yield.

The tunneling of Table Mountain is a wonderful web-work of burrows. A large number are still being driven far into the mountain's heart. Among others deserving notice is the Buchanan tunnel, 287 feet in length. The Deseret Tunnel Company have run over five tunnels, one of which is over 500 feet in length, and though unsuccessful in striking the gravel, so confident are they that it is in their claim, they have now commenced a new tunnel.

A very valuable quartz discovery was made a few weeks since, near Dobbin's ranch, in Yuba county. The vein is five feet thick, at the end of an open cut which has been driven up to it, striking it twenty feet deep, and exposing a large amount of rock, which appears to maintain a great degree of uniformity. Many very rich specimens have been taken out.

A valuable ledge of lime rock, of a very superior quality, has been discovered within one hundred rods of the main traveled road from Marysville to Camptonville, and within twenty-five miles of the former place. It is conveniently located for working.

From Oregon.

The steamer Columbia arrived on Wednesday evening, from Puget Sound, W. T., and the Columbia river, with the latest dates.

The Hudson's Bay Company and Washington Territory.—There seems to be some trouble brewing between the people in Washington Territory and the Hudson's Bay Company, in regard to the group of islands lying between the straits of Arro and Rosario, at the south-eastern termination of Vancouver's Island. These islands are claimed by the American government, are included in one of the counties of Washington Territory, and taxes have been assessed upon them. The Hudson's Bay Company, however, having refused to pay the usual taxes, some sheep belonging to them have been seized and sold for the amount. An Inspector was afterwards appointed by the United States Collector of Customs, to reside on the islands and look after matters there. This Inspector, Mr. Olney, has been warned by the Hudson's Bay Company that he is not safe from the Northern Indians, and is advised to shift his quarters. It is believed that this is a pure dodge of the Company to get rid of American settlers on the islands, so that they may found and fortify their own pretensions to them by their exclusive possession. Mr. Olney, taking things seriously, has left the islands.

The Washington Republican urges that he should be sent back, supported by a force of United States troops, sufficient to protect him, and that the Hudson's Bay Company should get a civil hint not to interfere. That these islands belong to the United States by the terms of the last treaty itself there is not the slightest doubt, nor that the Federal Government will insist on its title. Their importance to Washington Territory may be seen from a glance at the map. They are not only very valuable in themselves, but essential to the military and naval protection of all the rest of our waters in the North, covering as they do Bellingham Bay and Admiralty Inlet.

The Shasta and Umpqua Indians.—The Shastas and Umpquas, says the Salem Statesman, are keeping guard and in arms. There had been a number of deaths among the Shastas, and they attribute them to some mysterious influence of the Umpquas, and had shot dead an Umpqua "medicine man," and wounded another. Among the deaths of the Shastas was that of a son of chief "John." At the moment of his death, he said he felt an unseen arrow pierce his heart, sent by the Umpquas. The shooting was the consequence of this. The Indians seem to have revived "Salem witchcraft." The Superintendent says he has succeeded in allaying the excitement.

Adjourned.—The eighth session of the California Legislature adjourned yesterday, *sine die*.

Steamer Eclipse.—This splendid boat will soon resume her trips between this city and Sacramento.

In the Army.—Mr. Robert Scott, son of Rev. Dr. W. A. Scott, of this city, has received his commission as Second Lieutenant in the U. S. Army, and has been assigned to the Fourth Regiment of Infantry, in Oregon.

The total number of deaths in San Francisco, during the week ending April 25th, was 22, being five less than during the preceding week.

Exportation.—The schooner Far West, says the Sacramento Union, was loading for San Francisco, on Thursday, with two hundred and fifty hides, fifty bales of wool, two barrels of tallow, and 2,200 horns—shipped by W. B. Hunt. She was to sail to-day, after taking on board a further lot of the same description.

Dr. Ryer, of Stockton, recently removed a tumor from the breast of a lady patient. The whole breast, with its attachment to the ribs, and the muscles, were completely removed. The patient, a lady of sixty years, is reported doing well.

Buildings are in great demand at Petaluma. The Journal says: Residences which could have been secured at $15 per month, one year ago, are now readily sought for at $20 and $25 per month. But this increased demand for buildings is not confined to residences alone; stores of all kinds, and more especially those which are supposed to be fire-proof, are in equal demand, and at a great premium.

Efforts are being made to get a convention of the quartz miners of the State to meet at Sacramento some time in June, for the purpose of consultation as to the most practicable means for extracting the gold from the quartz, and for a general interchange of views relative to that species of mining.

Wm. J. T. Overton, the inventor of the steam wagon, is in Sacramento, engaged in making arrangements for the construction of the locomotive apparatus of from ten to twelve horse power, suitable for drawing a train of four cars between that city and Marysville.

A newly organized company at Marysville propose to connect that city with Folsom, by railroad. The distance is 39½ miles in length, 37½ miles of which distance is in a straight line. The line of survey strikes the foothills at Secret Ravine, in Placer county, and crosses the open road at the Half-way House, fifteen miles from Auburn. The highest grade between the two cities is 42 feet per mile. The grade for 23 miles out of the 39½, is ten feet and under per mile, while 14 miles of the distance is a level, with scarcely an elevation or depression.

The money thus far expended on the trial Artesian well at Stockton amounts to about $6500. The expense of sinking the well at its present depth, says the Stockton Argus, is $10 50 per foot. During the past week the work has been comparatively easy, the depth attained being about 25 feet, through a stratum of coarse black sand, making a total depth of 725 feet.

Accounts from Plumas county are extremely encouraging. At Poorman's Creek and Nelson Creek, the miners are all doing well, and some making large wages. On Jamison Creek gold is being taken out by thousands. Long Valley pays from $6 to $25 per day to the hand.

Watermelons—Several watermelons were exposed for sale on Thursday, at a fruit stand on J street, Sacramento. Of course, says the Union, they were not brought from Acapulco, but raised on the soil.

It is anticipated that the stage road between Quincy, Plumas county, and Marysville, will be completed by the 1st of July.

Four hundred hands, engaged in the brick yards of Sacramento, have struck for higher wages.

There are sixty-two Odd Fellows' lodges in this State, with 3800 members.

At Elizabethtown, Plumas county, 102 ounces of gold were taken out by four hands in one day.

SHEEP.—In the neighborhood of San Juan and Gilroy, Santa Clara county, there are several immense flocks of Mexican sheep, brought to California a year or so since—one firm is reported to have 25,000 head. They are now being sheared, and the wool conveyed to this port, to be shipped for New York.

ANOTHER ROAD.—The Red Bluff Beacon says a party has just returned to that place, by the Lassen route from Honey Lake, and report that a good road can be made for five thousand dollars, no improvement being required other than the removal of the loose rocks. They report from four to six feet of snow on the mountains.

A NOBLE GIFT.—At the Farmers' Assembly, Gen. P. S. Cocke, on retiring from the office of President of the Agricultural Society, which he has so ably filled, gave to the Society his check for twenty thousand dollars, as a contribution to a fund for maintaining an Agricultural School in connection with the University of Virginia. —[Richmond Dispatch.

Important Caution to Druggists and Merchants in General.

Whereas, one William Leith, late of the city of New York, drug broker, has recently been engaged in the nefarious and unlawful business of counterfeiting the medicines known throughout the world as Holloway's Pills and Holloway's Ointment, and ordered to be printed for him, under false pretences and for fraudulent purposes, 500,000 copies of the book or pamphlet of directions around each box and pot;

And whereas, the counterfeit book or pamphlet is well calculated to deceive, being a *fac simile* of the original, except so far as regards the water mark in the paper, viz.. "Holloway, New York and London," which appears on every leaf of the genuine document, but can only be seen by holding the paper between the eye and the light;

And whereas, the aforesaid William Leith, having been arrested and fully charged, on examination before Justice Connolly, with procuring the printing and uttering of the above counterfeits, escaped from the custody of the officers on the 20th day of December, 1856, and is now a fugitive from justice, and is supposed to be pursuing his dishonorable and felonious designs elsewhere;

The druggists of the various cities, towns and villages of the United States are therefore hereby cautioned against dealing with the aforesaid William Leith for any articles purporting to be Holloway's Pills and Holloway's Ointment, or purchasing any preparations bearing that name from any quarter, unless the leaves of the pamphlets wrapped around the boxes and pots containing the same shall bear the words "Holloway, New York and London," in the form of a water mark, which can only be distinguished by holding up the printed sheet singly to the light. All others are *counterfeit*; and all persons vending them are liable to heavy penalties, and will be prosecuted to conviction by the proprietor of the genuine preparations, as the only means of guarding his own interests and protecting the public against damage to health and life from the use of deleterious articles, sold under the guaranty of his name and reputation.

The said Leith is a Scotchman by birth, about 35 years of age, of good address, deep-toned voice, florid complexion, light hair and thin whiskers, gray eyes, standing about 5 feet 8½ inches, and somewhat inclined to corpulency.

DOCTOR HOOFLAND'S
CELEBRATED
GERMAN BITTERS,
PREPARED BY
Dr. C. M. JACKSON, Philadelphia, Pa.,
WILL EFFECTUALLY CURE
LIVER COMPAINT, DYSPEPSIA, JAUNDICE,
Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c., Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that the remedy is really deserving the great celebrity it has obtained.

Principal Office and Manufactory, No. 96 ARCH STREET, Philadelphia, Pa.

For sale by all Druggists in California and elsewhere.
PARK & WHITE,
Washington street, San Francisco,
Wholesale Agents for California.

Pacific Mail Steamship Company's Line
TO PANAMA,
CONNECTING
VIA PANAMA RAILROAD
WITH THE STEAMERS OF THE
UNITED STATES MAIL STEAMSHIP COMPANY,
AT ASPINWALL.
For New York and New Orleans Direct.
THE ONLY RELIABLE AND SAFE ROUTE.
Departure from Vallejo street Wharf.

THE MAGNIFICENT STEAMSHIP
GOLDEN GATE,
R. L. WHITING, Commander.
Will leave Vallejo street Wharf, with the United States Mails, Passengers and Treasure, for PANAMA,
On TUESDAY, - - - - - - - - - MAY 5th,
At 12 M, punctually.

Passengers by this Line are landed on their arrival at Panama upon the Wharf of the Railroad Terminus, by the Company's Steam Ferry Boat, and proceed immediately by
Railroad Across the Isthmus to Aspinwall,

Where the steamers of the U. S. M. Steamship Company are always in readiness to convey them to New York or New Orleans. Passengers for New Orleans proceed by steamer from Aspinwall.

THROUGH TICKETS
Are furnished, including the transit of the Isthmus.

Passengers are notified that the tickets for the steamers of the U. S. Mail Steamship Company must be presented to their Agent at Aspinwall for registry and exchange, as they will not otherwise be available.

☞ Treasure for shipment will be received on board the steamer until 12 o'clock midnight, Monday, May 4th.

No Merchandise freight will be received on board after 3 P.M., May 4th, and a written order must be procured at the Company's Office for its shipment.

For freight or passage, apply to
FORBES & BABCOCK, Agents,
Corner of Sacramento and Leidesdorff streets.

☞ A Choice of Berths on the Atlantic Steamers is secured by the early purchase of Tickets in San Francisco. v7-1

CITY TRADE REPORT—FRIDAY MORNING, MAY 1.
[From the Evening Bulletin.]

Flour—Sale of 500 bbls. Domestic, private; 550 qr. sacks do, in lots, at $12 50 a $14, for superfine according to quality; and $16 for Fowler's self-raising.

Wheat—150 bags sold at 4c.

Barley—900 bags sold at 1¾c.

Oats—150 bags sold at 2¼c.

Potatoes—600 bags at 1c; 75 do extra, at 1¼c; and 300 do good, at $1 per bag.

Pork—50 bf bbls. Clear, at $24.

Bran—30 tons sold at $30.

Hemp—137 bales, ex Comet, damaged at auction, by Jones & Bendixen, at 4½c per pound.

SPECIAL NOTICES.

☞ SIX REASONS WHY EVERYBODY USES LYON'S KATHAIRON:

1st. It is the *cheapest* preparation for the hair ever made.
2d. It is pronounced by all to be the most *beneficial*.
3d. It is the most *agreeable* to use.
4th. It is the *cleanest* and most *carefully prepared*.
5th. It is the most *highly perfumed*.
7th. It is the only article that never fails to give *entire satisfaction*.

The immense sale of the Kathairon—nearly 1,000,000 bottles per year—attest its excellence and universal popularity. Sold by all dealers, everywhere, for 25 cents per bottle.

☞ WISTAR'S BALSAM OF WILD CHERRY,
The great remedy for CONSUMPTION and all other diseases of the Pulmonary Organs.

The greater the value of any discovery the higher it is held in the esteem of the public, and so much in proportion is that public liable to be imposed upon by the spurious imitations of ignorant, designing and dishonest men.

Now that this preparation is well known to be a more certain cure for incipient CONSUMPTION, ASTHMA, LIVER COMPLAINT, COUGHS, BRONCHITIS, and all similar affections, than any other remedy known, there are found those so villainously wicked as to concoct a spurious, and perhaps a poisonous mixture, and try to palm it off as the genuine Balsam.

This is to caution dealers and the public generally, against purchasing any other than that having the written signature of I. BUTTS *on the outside wrapper.*

Prepared only by Seth W. Fowle & Co., Boston, Mass., to whom all orders should be addressed, and for sale by their agents.

Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 15-1m

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

☞ READ—Copies of the Farmer for Mailing. That all may have an opportunity of sending the FARMER to their friends in the East, so as to make known the resources of California, we have

Reduced the price to Twelve and a-half Cents per Copy.

It will hereafter be found at the following places:

J. W. SULLIVAN, ULLMAN & Co., } Post Office Arcade.
NOISY CARRIER'S, Long Wharf
HUTCHINGS & ROSENFIELD, Montgomery street.
BOOK STORE, corner of Clay street and the Plaza.

At these places can also be found copies of the State Society's Reports. Price 50 cents.

The FARMER will also be had ready for mailing at all times at the office, at $1 50 per dozen; also single copies.

WARREN & CO., Editors and Proprietors.

BOOKS FOR GARDENERS.

JUST received, at the office of the FARMER, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

☞ FLAX SEED.—We have just received several cases of very superior Flax Seed, from the East. It is of very superior quality; and there is no doubt but it can be grown here more successfully than in any other State in the Union. We really hope many will be induced to try this most valuable article. We are ready to furnish all who would like to try it as an experiment, with small parcels, *free*, if they will try it carefully. Those making it a business can be supplied in large quantities. WARREN & CO.,
v7-10 130 Washington street, San Francisco.

☞ TO STOCK RAISERS.—We earnestly invite stock raisers of all kinds to advise with us and give us information in regard to such stock as they may have for sale, and all the particulars of price, quality, &c. We are often inquired of relative to such matters, and can always find purchasers for almost all kinds of extra stock. Valuable stock will always sell; and we intend to keep a register of all such stock as may be in market, and assist in finding purchasers for it, and to do everything in our power to further the breeding of good stock.

Very Valuable and Important!
VAUX'S ARCHITECTURE.

VILLAS AND RESIDENCES: A Series of Designs Prepared for Execution in the United States. By Calvert Vaux, Architect (late Downing & Vaux). Newburgh on the Hudson. Illustrated by 300 engravings 8vo, muslin. Price $2.

This copiously illustrated work has been prepared with the intention of giving a hearty practical response to the ever-increasing popular desire for improvement in American rural architecture, and it deals with the whole subject in a simple, comprehensive style free from all professional technicalities. As it is very fully illustrated, it affords a storehouse of practical suggestions to all who are interested in the building of country houses in America; and as the architectural designs of which it is composed have been for the most part prepared in detail for actual execution, this work has the all-important advantage of being the result of *bona fide* experience both on the part of employers and architect. It also contains a much-needed chapter, in which the special features of interest that occur in building country houses are touched on and drawn in detail, and a valuable amount of information on these points is thus introduced in a condensed, intelligible manner.

To avoid any confusion of ideas in examining the book, the various illustrations are so arranged that the whole scope of each design may be comprehended at a glance; and the vignettes that are appended to the designs have afforded opportunities for treating in an artistic manner many interesting accessories that have hitherto scarcely attracted the attention they deserve.

To a great number of persons this volume will have an additional interest, as it contains several designs that were prepared while the author was in partnership with the late A. J. Downing, whose well-known works have had such a beneficial influence on rural taste in the United States.

Wiley & Halstead have on sale, an extensive assortment of Books relating to the above subjects, and they will supply, by mail, all Magazines and Journals relating thereto, both English and American.

The above Volumes will be mailed to any address, on receipt of Postage Stamps. v7-16 2m

Downing's Rural Essays.

Edited with a Memoir of the Author, by George William Curtis, and a Letter to his Friends, by Frederica Bremer. In One Volume Octavo.

Of Mr. Downing's reputation as a writer, it is almost superfluous to speak. He is, by universal consent, the best and most interesting among those who have chosen the same line. This volume contains all the editorial papers in the HORTICULTURIST. The memoir will be read with great interest, on account of the amiable and excellent character of Mr Downing, as well as his well-earned literary fame. Miss Bremer's testimonial to his merit is an eulogium equally worthy of him and of herself. The volume closes with a series of interesting letters from England.

American Poulterer's Companion.

A PRACTICAL TREATISE ON THE Breeding, Rearing and General Management of various Species of Domestic Poultry. Illustrated with Portraits of Fowls, mostly taken from Life; Poultry-House, Coops, Nests, Feeding-Hoppers, &c., &c., &c. A new edition, enlarged and improved. By C. N. Bement. With 120 Illustrations on Wood and Stone. Square 8vo., Muslin, $1 25.

This is just the thing. Here is the whole feathered tribe—geese and ducks, hens and turkeys, without number. Besides the manifest utility of such a book to farmers generally, it will be the special delight of hundreds of juvenile readers, whose first attempt in the care of stock on a farm is the oversight of a poultry-yard. Even now we see their eager eyes glistening over these pages. But the book has great merit and value not only for young folks, but for all who live in the country, and who have occasion to attend to this most useful branch of domestic economy.—[N. Y. Evangelist.

We have not yet become acquainted with a more complete treatise on the subject. No labor nor expense has been spared to render it the best work of the kind ever published, and such we consider it.—[News.

If our country friends get this book, we have no doubt that their poultry-yards would be improved.—[Richmond Presby.

No farmer should be without it.—[Spectator.

Eminently practical. All who are in any way interested in the rearing of poultry will be delighted with the great amount of useful information presented in this book.—[Com. Adver.

The lithographs of splendid specimens of stock are really superb, and render the volume ornamental as a gift-book.—[N. Y. Sun.

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*: but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on *every* person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for ourse's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promotes habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—how ever separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,246 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 232; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

Ladies' Department.

[For the California Farmer.]

MY MOTHER.

Twilight her shadowy mantle o'er the earth has thrown,
I linger midst a merry throng—in heart alone;
I listen to the joyous laugh—in answer smile;
But thoughts of thee, my wayward heart, alone beguile.
I muse upon thy form by fancy dear portrayed,
Oh! would again that form were to my gaze displayed;
Alas! my gentle Mother, 'tis for thee I mourn,
I fancy thou art with me—wake and am alone.

For others, have I left thee, Mother dear; awhile
For them, I leave thy tender care, thy loving smile;
But oh! remember 'tis not long that thus we'll part;
I will return to cheer thy sad and lonely heart,
And while thy heart, for me, is bowed with weight of care,
Oh! may this now be granted—'tis my prayer;
May some kind, guardian angel, then his wings o'erspread
And soothe from fear and pain, thy aching head.

In dreams I'm near thee—feel thy loving, kind caress,
And oh! to be with thee in dreams, is happiness;
My prayer at morn, at eve, is, that I may return
To that loved home, where kindly hearts for me do mourn.
Then ah! what joy is mine, when in that home of bliss
I feel again a mother's, sister's, loving kiss;
To hear my Mother's fervent blessing on me rest,
And once again recline upon that mother's breast.

FLORENCE PERCEY.

Hoops and High Heels.

The following sensible article from the ladies' department of the Hunterden Gazette, edited by Mrs. R. S. Nichols, the well-known poetess, will, we know, be read with interest by our lady friends:

All kinds of writers, good, bad, and indifferent, have had their fling at ladies' hoops and we know of nothing that should prevent us from touching lightly upon the vexed subject, provided we promise to deal gently with this latest pet foible of our sex. When a good surgeon has a delicate operation to perform—one that demands his firmest nerve and nicest skill, he endeavors first to soothe the patient, and induce a tranquil and hopeful state of mind, that no mental tremor may interfere with the guarded and careful movements of the terrible knife, and thus render the experiment twice as laborious and dangerous as it would otherwise be. We are obliged to acknowledge, that the social surgeons who have been self-employed to cut away hoops from fashionable ladies' dress, have gone about the business in a very clumsy and unprofessional manner. Instead of lulling the patient's nerves to rest, and calming her many little turbulent feelings upon occasion of losing so large an excrescency of dress, they have excited her with sarcasm, until the inflammation of her mind has induced a preternatural superfluity of garments as alarming as it it must be wonderful to the aged man of the moon, who has overlooked this planet so full of feminine folly, for many long centuries. What the man in the moon thinks, however, is hardly of as much worth and importance as what the men on earth imagine, when an animated, inverted balloon, with a little fluttering, laced, feathered and flowered apex comes bearing down towards them, as they walk the public avenues of this sublunary sphere. What the emotions of the men of Earth are at such times, it is not easy to say, but we will confess that we ourself have had several ejaculations wrung from us upon like occasions, more noticeable for strength and depth of wonder, than for extreme elegance, or any other grace, which should distinguish womanly speech. A fashionable lady, with an untold number of yards of dry goods built up over a framework of hoops and crinoline topped with a bonnet which, having been in decline for several years, is now reduced to a mere skeleton, with a transparent skin of lace, and a hectic flush of flowers; and soled with a pinched pair of high-heeled boots, which throw all the weight of her magnificent proportions upon her poor squeezed toes, is certainly a sight not to be seen in any other globe, or in parts of this, even, where man is uncivilized, and woman ditto. It requires all the progress, culture and civilization of christian communities in the nineteenth century to produce this exquisite conglomerate specimen of female humanity just described. When to her mincing, ungraceful, painful gait, is added a loud laugh, and vulgar slang when she opens her mouth; when you take from her modesty, proper self-respect and womanly pride, and behold her bold, unblushing, vain and ignorant, we think that the prospect of happiness which men of the earth indulge in could not well be smaller, and the reality might be hooped into much less space than her crinoline describes, as she sweeps round the corner with the clank, clank, clank accompaniment of her high heeled shoes! There are women who have discarded hoops altogether, or who wear them modestly and moderately. There are those, also, who will not consent to poise themselves upon their toes, like an opera dancer about to execute a marvelous pirouette, but who are content to rest their feet upon the ground, after the fashion prescribed by nature. And above all, there are women who are conscious of their high position, of the important part they have played in the world" destiny, and of the mission of which God has given them to accomplish here. Do women, hooped like barrels, and heeled like troopers, dignify their stations as wives and mothers, or add lustre to womanhood?

There!—we fear very much that our sugery is not a whit better than that of those who have preceded us, and that we have made some awkward gashes where we meant to carve daintily. Well, it can't be helped, and if any are hurt, they are at liberty to hoop us—if they can.

Our Homes should be Beautiful.—Not only should we cultivate such tempers as serve to render the intercourse of home amiable and affectionate, but we should strive to adorn it with those charms which good sense and refinement so easily impart to it. We say easily, for there are persons who think that a home cannot be benefited without a considerable outlay of money. Such people are in error. It costs little to have a neat flower-garden, and to surround your dwelling with those simple beauties which delight the eye far more than expensive objects. If you will let the sunshine and the dew adorn your yard, they will do more for you than any artist. Nature delights in beauty. She loves to brighten the landscape and make it agreeable to the eye. She hangs ivy around the ruin, and over the stump of a withered tree twines the graceful vine. A thousand arts she practices, to animate the sense and please the mind. Follow her example, and do for yourself what she is always laboring to do for you. Beauty is one of God's chosen forms of power. We never see creative energy without something beyond mere existence, and hence the whole universe is a teacher and inspirer of beauty. Every man was born to be an artist, so far as the appreciation of beauty is concerned.

The Angel of the House.

There is an angel in the house. No matter how fallen the inmates, how depressed the circumstances, there is an angel there to pity or to cheer. It may be in the presence of a little child, or it may be inclosed in a stooping and wrinkled body, treading the downward path to the grave. Or, perhaps, in a cheerful spirit, looking upon the ills of life as so many steps towards heaven, if only bravely overcome, and mounted with sinless feet. We knew such an angel once, and it was a drunkard's child. On every side, wherever she moved, she only saw misery and degredation, and yet she did not fall. Her father was brutal, and her mother discouraged, and her home thoroughly comfortless; but she struggled along with angel endurance, bearing above with almost saintly patience the infirmities of him who gave her existence, and then hourly embittered it. Night after night, at the hours of ten, twelve, and even one, barefoot, ragged, shawlless and bonnetless, has she been to the den of the drunkard, and gone staggering home with her arm around her father. Many a time has her flesh been blue with the mark of his hand, when she has stepped in between her helpless mother and violence. Many a time has she set upon the cold curbstone with his head in her lap; many a time known how bitter it was to cry for hunger, when the money which should have bought bread was spent in gin. And the patience that the angel wrought with made her face shine; so that, though never acknowledged in the courts of the world, in the kingdom of heaven she was waited for by assembled hosts of spirits, and the crown of martyrdom lay ready waiting for her young brow. And she was a martyr. Her gentle spirit went up from a couch of anguish—anguish brought on by ill usage and neglect. And never till then did the father recognize the angel in the child; till then did his manhood arise from the dust of its dishonor. From the humble grave he went away to steep his resolves for the better in bitter tears; and he will tell you to-day how the memory of her much endured life keeps him from the bowl; how he sometimes goes and stands where her patient hands have led him, while her cheek crimsoned at the sneers of those who scoff at the drunkard's child. Search for the angels in your household, and cherish them while they are among you. It may be that all unconsciously you frown upon them, when a smile would lead you to a knowledge of their exceeding worth. They may be among the least cared for, most despised, but when they are gone with their silent influence, then will you mourn for them as for a jewel of great worth.—[The British Workman.

Domestic Expenses.—Every wife knows her husband's income, or ought to know it. That knowledge should be the guide of her conduct. A clear understanding respecting domestic expenses is necessary to the peace of every dwelling. If it be little, "Better is a dinner of herbs where love is, than a stalled ox and hatred therewith." If it be ample, let it be enjoyed with all thankfulness. We believe that partners in privation are more to each other than partners in wealth. Those who have suffered together love more than those who have rejoiced together. Love is "the drop of honey in the draught of gall." When the wife, seeing her duty, has made up her mind to this, she will brighten her little home with smiles that will make it a region of perpetual sunshine. She will never even imply a wish for things which are the appendages of wealth. She knows they could only be purchased at a cost from which she turns shudderingly. Following with the acuteness of a quickened affection every turn of her husband's thoughts, if she should see that he leans towards the world's good things, that he gives orders to his wine merchant beyond the bounds of their enforced temperate indulgence, that city luxuries are sent home to her, then let her bestir herself for his safety and her own, for they are indissolubly united. If he bring her expensive boxes of sweetmeats, half-a-dozen packages of French gloves, or even a half-crown *bouquet*, then let her remember that these things are the beginning of evil. Let her take her woman's power into her own hands, and by all the gentle arts of love and the powerful arguments of truth, let her win him back to contentment with the lot that Heaven has bestowed, and so forcing him to acknowledge that its best blessing is his wife.

The Mother at Home.—By the quiet fireside of home, the true mother, in the midst of her children, is sowing as in vases of earth, the seeds of plants that shall some time give to Heaven the fragrance of their blossoms, and whose fruit shall be to us a rosary of angelic deeds, the noblest offering that she can make through the ever-ascending and expanding souls of her children to her Maker. Every word that she utters, goes from heart to heart with a power of which she little dreams. Philosophers tells us in their speculations, that we cannot lift a finger without moving distant spheres. Solemn is the thought that every word that falls from a mother's lips, every expression of her countenance, may leave an indelible impression upon the young souls about her, and form the underly strain of that education which peoples heaven with celestial beings, and gives to the white brow of the angel, next to the grace of God, its crown of glory.

Obedience in Children.—It is unspeakable what a blessing it is to a child, what a saving of unhappiness and wickedness in after life, to be early taught absolute obedience: there must be no hesitating or asking why, but what a mother says must at once be done. The young twig bends easily, but remember that, in after years, it grows hard, and you will break before you can bend it. A little steadiness at first will save you many years' sorrow. While you insist upon obedience, however, you must take care that you do not provoke a child, and tempt it to disobedience by unreasonable and foolish commands. "Provoke not your children to wrath;" and when it is necessary to punish them, see that it never be done violently and in a passion, but as a duty.

Early Rising.—I would inscribe on the curtains of your bed and the walls of your chamber, "If you do not rise early you can make progress in nothing. If you do not set apart your hours of reading, if you suffer yourself or any one else to break in upon them, your days will slip through your hands unprofitable, and frivolous, and unenjoyed by yourself."—[Chatham.

Of all passions, jealousy is that which exacts the hardest service, and pays the bittest wages. Its service is—to watch the *success* of our enemy; its wages—to be *sure* of it.

Good.—We understand that the next summer's hoops will be only six inches wider than those which now encircle the ladies.

BOOKS, &c.

The Fruit Garden.

By P. Barry,

Of the Mount Hope Nurseries, Rochester, N. Y.

A TREATISE intended to illustrate and explain the Physiology of Fruit Trees; the Theory and Practice of all operations connected with the Propagation, Transplanting, Pruning and Training of Orchard and Garden Trees, as Standards, Dwarfs, Pyramids, Espaliers, &c.; the laying out and arranging of different kinds of Orchards and Gardens; the Selection of suitable Varieties for different purposes and localities; the Gathering and Preserving Fruits; Treatment of Disease, Destruction of Insects; Description and Use of Implements, &c. Illustrated with upward of 150 Figures, representing the different parts of Trees, all Practical Operations, Forms of Trees, Designs for Plantations, Implements, &c. 1 vol., 12mo., cloth. Tenth Thousand.

HOMES FOR THE PEOPLE IN SUBURB AND COUNTRY; Or, The Villa, the Mansion and Cottage. Adapted to American Climate and Wants. By Gervase Wheeler. 1 vol., 12mo., with 100 Engravings. Third Edition.

"Good taste, practical common sense, and an eye to the usages of the country appear throughout the work, while its designs and illustrations will prove an invaluable assistance to those who wish to build, and to build wisely and well."—*N. Y. Evangelist.*

"The author's study has been to furnish models for convenient, tasteful and even elegant suburban and country dwellings, from the lowest to a high cost, and to afford all the necessary information for their construction. We should like to see such books wide spread, as our national architecture needs improvement."—*Philadelphia Presbyterian.*

"There are abundance of books on architecture and on landscape gardening, but an actual sabence of such another volume as the present. The designs are exceedingly tasteful, and imbued with the highest spirit of architectural beauty."—*N. Y. Express.*

Copies of either of these books sent by mail (post-paid), for $2, remitted to

Valuable Works

PUBLISHED BY
BLACKIE & SON,
No. 117 Fulton street, New York.

A HISTORY OF THE EARTH AND ANIMATED NATURE. By Oliver Goldsmith. With numerous notes from the works of the most distinguished naturalists. Illustrated by nearly 2,400 figures, of which 230 are beautifully colored. Two vols. large 8vo.

RHIND'S HISTORY OF THE VEGETABLE KINGDOM. Embracing the Physiology, Classification, and the Culture of Plants; with their various uses to Man and the Lower Animals, and their application in the Arts, Manufactures and Domestic Economy. Illustrated by 700 figures engraved on Wood and Steel, of which 100 are elaborately colored. One vol. large 8vo.

THE FARMER'S GUIDE. A Treatise on the Diseases of Horses and Black Cattle, with Instructions for the Management of Breeding Mares and Cows. By James Webb, Veterinary Surgeon.

HOW TO CHOOSE A GOOD MILK COW; or, a Description of all the Marks by which the Milking Qualities of Cows may be Ascertained. With a Supplement on Dairy Cattle, their Qualities, Management and Productive Results, with Hints for Selecting. Illustrated with Engravings.

☞ Samples of the above Books can always be seen at the Office of California Farmer, where Catalogues will also be found. v7-6

The Most Successful and the Best.

NOW COMPLETE AND FOR SALE,
SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.

By Epes Sargent, author of "Standard Speaker," &c.

The following are nearly ready:
Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

Sargent's Standard Speller contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

v7 6 3m San Francisco, Cal.

Rural Publications.

THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages. Two Dollars per annum. "Without question the best Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."

THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.

THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.

SPECIMEN NUMBERS

Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to

LUTHER TUCKER & SON, Albany, N. Y.

☞ Subscriptions for any of the above works received at the offices of the Farmer and forwarded. v7-2 tf

HOTELS, &c.

Estudillo House,

SAN LEANDRO, Alameda County.

THE subscribers respectfully inform their friends and the public that they have purchased the interest of the former proprietors in this popular and well-known establishment, and trust, by strict application to business and attention to the comforts of their patrons, to merit a share of public patronage. It is their intention, as soon as practicable, to make great improvements on the premises, and their patrons may rest assured that none but the choicest of Liquors will ever be found at their house. The table will be supplied with the best the market affords, and the rooms are furnished in a manner not to be surpassed by any hotel in the State.

To those of our friends who may not be "posted," we beg leave to say, that our house is located at the county seat of Alameda county, six miles from San Antonio, to which place the Contra Costa boat makes three trips a day. Stages leave San Antonio immediately on the arrival of the boat, and return in season to meet her on her return trips.

San Leandro is situated on the main road to San Jose, in the center of the finest farming district of country in this State. The easy access from the city to this delightful village, renders it a very desirable place of resort for gentlemen with their families who may wish to retire for a season from the bustle of city life. The house is admirably adapted for the accommodation of families, and particular attention will be paid to those who may honor us with a visit.

The long experience of Mr. Biggs, formerly one of the well-known firm of Biggs & Kibbe, is sufficient assurance that the public will always be able to find, at this house, the choicest articles that the market affords.

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

To Photograph Operators.

Ambrotype, Photograph and Daguerreotype

STOCK AND CHEMICALS,

FROM THE BEST MANUFACTURERS,

FOR SALE AT THE LOWEST PRICES, BY

R. H. VANCE,

Corner Montgomery and Sacramento streets,

SAN FRANCISCO.

BEING OURSELVES PRACTICAL CHEMISTS, and manufacturing many of our Chemicals, we can guarantee them far superior to any put up for sale.

To operators out of the city we will send our own prepared Collodion, which we use, and which surpasses any ever sold in the country for tone and finish. v7-19

BLACK HAWK DAVID HILL.

THE ONLY ENTIRE HORSE in this State sired by the celebrated BLACK HAWK, of Bridport, Vermont, and can be seen at the Black Hawk Rancho, sixteen miles from this city, on the San Jose road, for the ensuing season of four months.

Colts Sired by David Hill in 1856.

Persons owning the same are requested to call on the undersigned before they are one week old, register and receive certificates for the same.

Colts Sired by David Hill in 1855.

I will give for Entire Colts five hundred dollars, and three hundred for Fillies, delivered sound, at the office of the agency, Black Hawk Stables, 99 Pine street.

April 1, 1857. B. F. FISH, Agent. v7-13

IRON WORKS, &c.

EMPIRE AND KEYSTONE

Have now the largest and best assortment of Gear and Machinery Patterns in the State, a list of which will be forwarded to any one desiring it, free of cost.

v7-6 3m PETER DONAHUE.

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,

SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

Eastern News.

The P. M. S. S. Co.'s steamer Golden Gate, F. W. Lapidge, Commander, arrived on Wednesday morning, about seven o'clock, with 700 passengers, and 260 U. S. troops—480 packages Express and foreign merchandise, and the regular mails from New York to April 7th, and from Orleans, April 6th. The Golden Gate brings 206 women and children. Health and tranquility prevailed on the Isthmus of Panama, at the time the steamer left.

California Appointments.—The following is a list of Appointments by the President:

Benjamin F. Washington, Collector of the Customs for the District of San Francisco, vice Milton S. Latham, resigned, to take effect June 30, 1857.

Frank Tilford, Naval Officer for the District of San Francisco, vice William B. Dameron, whose commission expires March 26, 1857.

Wm. B. Dameron, Surveyor of the Customs for the District of San Francisco, vice Wm. Van Voorhies, whose commission expires March 26, 1857.

José M. Covarrubias, Collector of the Customs for the District of San Diego, vice Oliver S. Witherby, whose commission has expired.

Andrew Lester, Collector of the Customs for the District of San Joaquin, vice James M. Scofield, whose commission has expired.

Augustin Olivera, to be Receiver of Public Moneys at Los Angeles, in the place of Andreas Pico, whose commission expires on the 29th inst.

William W. Gift, re-appointed, to be Register of the Land Office at San Francisco, his previous term of office having expired.

Walter H. Harvey, to be Register of the Land Office at Los Angeles, vice Hilliard P. Dorsey, whose commission expired 28th inst.

Charles H. Hempstead, Director of the Branch Mint, San Francisco, vice Peter H. Lott, removed.

Col. John C. Hays is retained Surveyor General of California.

John Bigler, of California, to be Envoy Extraordinary and Minister Plenipotentiary to the Republic of Chile, in the place of D. A. Starkweather.

The following is not yet officially given:

Marshal Northern District—Major Solomon.
Postmaster, Sacramento—Elder.
Collector of Sacramento—J. F. Madden.
Collector of San Pedro—C. E. Carr.
Marshal Southern District—J. C. Penny.

The California Wagon Road.—The Secretary of the Interior has had a conversation with Senators Douglass and Weller, Mr. Chapman of Nebraska, Mr. Rice of Minnesota, and Mr. Denver, relative to the Wagon Roads to the Pacific, authorized by the act of the last Congress. The whole question was discussed, and they came to the conclusion that there should be a General Superintendent of the work, which should be divided into three sections, with a Sub-Superintendent to each. It is said that Colonel Wm. H. Nobles, of Minnesota, was regarded by all of them as eminently fitted for the General Superintendent.

Letters say that by next winter there will be a good wagon road to the State of California, irrespective of the other two—the Fort Kearny and El Paso—for which the act of Congress makes provision, through Kansas and New Mexico, to Fort Defiance, and the Colorado—which is not required to be constructed by contract, although the work will be performed under the direction of the Secretary of the Interior. This road is about four hundred miles in length, and for the construction of which the $50,000 appropriated by Congress is deemed to be sufficient. It is important, by reason of its connection with Missouri or Arkansas.

The Hon. Rob't. J. Walker, of Mississippi, and Hon. Richard F. Stanton, of Tennessee, have respectively accepted the appointments of Governor and Secretary of Kansas Territory.

The United States Treasurer reports that the amount subject to draft in the various United States depositories, on March 24, was $24,722,821.

It is stated that intelligence has been received at Washington, of the opening of the Tehuantepec route, and it is understood that the Postmaster General will shortly direct the United States Mail to be sent via that route.

A new Minister is to be appointed to Nicaragua.

The intelligence from every section of the Union gives assurance, that the wheat crop never presented a more promising appearance at this season of the year—say the papers.

The New Granadian Minister has arrived at Washington. It is rumored that the difficulty between our government and New Granada has reached such a point that the speedy dispatch of a large fleet to the Isthmus is highly probable.

The Administration have decided to send some military man as Governor to Utah Territory.

The difficulty between Spain and Mexico will be arranged without recourse to war. The Spanish Minister has received intelligence from his government to the effect that the expedition that had been fitting out to operate against Vera Cruz will not proceed to its destination.

Late accounts from New Mexico represent the Indians as very hostile. The Mexicans and Indians had had several battles. It was reported that Judge Hoppin, James Lewis, James Hubbell, and other Americans, had been killed.

The Wyckoff gold mines, in Fauquier county, Va., have been sold for $4,500, to satisfy an execution. $50,000 had been expended on the works.

A race came off on the 30th March, for $2,000, between two horses, to travel from Albany, N. Y., to Whitesboro', Oneida county, the distance between which points is stated to be one hundred miles. The race was won by the New York horse "Unknown," in 12 hours and a half. The Albany horse was only a quarter of a mile behind.

Hon. Neal Dow, of Portland, has been appointed by Gov. Williams, Commissioner from Maine, to the French Agricultural Exhibition in Paris, for 1857.

Professor Pierce, of Cambridge, Mass., has written a letter, scientifically confirming the view which all sensible people have taken in regard to the predicted collision of a terrible fiery comet with the earth, next June, viz: that there is no foundation for the prediction, and no man of science has probably made such an assertion.

Colonel Eskridge Lane, a nephew of President Buchanan, died on the 25th March, at Lancaster, Pa. His death was caused by the epidemic which has prevailed at the National Hotel, Washington. Col. Lane was 32 years of age, and unmarried.

Holloway's Pills and Ointment are safe and certain remedies for Salt Rheum, Scrofula, Rheumatism, and cutaneous affections. The one acting externally and penetrating the pores, the other internally on the blood and the organs of digestion, purifying and renovating the vital functions of the body.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box or pot.

A Valuable Tonic.—We believe no medicine has ever given such astonishing proof of its efficacy as the Oxygenated Bitters. In cases of Dyspepsia and General Debility it acts in the most agreeable manner, restoring health and cheerfulness, when all other remedies have failed.

SEEDS, &c.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (Sorghum Sucrae).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

A FEW packets of the Seed of this famous Tree are for sale at the State Society's Rooms, on Fourth street, Office of the California Farmer. v5-13

Young Ladies' Seminary, Benicia.
MISS MARY ATKINS, : : : : : : PRINCIPAL.

THE School Year of this Institution is divided into two terms of five months each; but the term commencing January 5, 1857, will close May 1st, 1857, in order that the semi-annual vacations may take place hereafter in May and October.

At the close of each term there will be a thorough examination of the pupils in all of their studies.

The Course of Instruction is such as is usually pursued in High Schools, and also includes the accomplishments of Drawing, Painting, Vocal and Instrumental Music.

The government of the school is gentle, but decided. A daily account of the recitations and deportment of each pupil is sent, monthly, to the parents, who are thus regularly informed of the progress of their daughters.

All of the pupils board either with their parents or at the seminary, and are under the special care of their parents, or of the teachers of the Institution.

The School is open to inspection at any time, and friends are cordially invited to visit it; but no pupils can receive calls from any persons, excepting those introduced by the parents and guardians to the principal.

TERMS:

	PER MONTH.
Tuition in the Higher English Studies	$ 8 00
" " Common "	6 00
" " Music and use of Instrument	10 00
" " Ancient and Modern Languages	5 00
" " Drawing and Painting	4 00
For Board (per week)	5 00
For Washing (per session)	25 00

No extra charge will be made for Vocal Music or Embroidery: neither are the pupils required to furnish their rooms, bedding, &c.; but each pupil must have every article of clothing distinctly marked with her name.

Payments are to be made invariably at the beginning and middle of each term, in advance.

The Great Stump Puller.

WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.

It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.

It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.

The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.

Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!

It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO.

New Cultivator.

THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measures operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who wish finely cultivated soil it has no equal.

Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.

All persons are invited to call at the workshop and examine it.
R. BEECHING, Manufacturer,
v7 5 3m 35 Pine street, San Francisco.

Hydraulic Hose and Pipes.

A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. Globe Pattern Rubber Stocks, with and without Steel Rings. The whole coupling together in the most thorough workman-like manner complete for use placing in the hands of miners the most valuable gold washing apparatus ever yet introduced into the mining regions, and one which is destined to do more for the development of our mountain treasures, than all others yet introduced.

Orders per Mail or Express promptly executed.
BRYANT & CO., 68 Battery street.
P. S A full assortment of Rubber and Leather Belting v7-6 2m

To Teamsters and Others.
PATENT ANTI-FRICTION AXLE GREASE.

THE season of internal communication with the mining district having opened, with a prospect of a large hauling business, the subscribers take the opportunity of thanking their numerous customers for the extensive patronage they have experienced for their
Patent Axle Grease
during the last four years, and beg to say that no pains will be spared in its future manufacture to sustain it in the wide reputation it has acquired as the best lubricating medicine for Coaches, Wagons, &c., ever introduced into California.
HUCKS & LAMBERT,
Inventors and Sole Manufacturers,
Mellus street, San Francisco.

Note.—One application of the Patent Grease will enable the heaviest teams to perform the longest journey, without requiring to be re-greased on the road; and further, as the Patent Grease works free from crumb or gum, the draft of the horse is very considerably lightened—a great desideratum in a long journey and a heavy road. v7-15 tf

---

To Farmers and Traders.

THE undersigned will pay the highest market prices, in Cash, on delivery, for California and Oregon *BUTTER, CHEESE, LARD, HAMS and BACON*. Large Dairies can make contracts for all they may make through the year, at the market price, when delivered, or otherwise, as may be agreed upon. Should any one feel disposed to consign to me, for sale on their account, any of the above articles, they can have very liberal *CASH* advances made on such consignments, and prompt returns. E. S. CROSS,
38 Commercial street, first store above Front,
San Francisco.

MEDICINES, &c.

SANDS' SARSAPARILLA,
FOR PURIFYING THE BLOOD,
AND FOR THE CURE OF
Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the stomach, the circulation, and the bowels, and thus three processes, which are ordinarily the result of three different kinds of medicine, are carried on at the same time through the instrumentality of this one remedial agent. Its great merit is, that it meets and neutralizes the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.

Lynn County, Oregon Ter., March 11, 185.

Messrs. A. B. & D. Sands, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 2d of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement; the swelling and pain in the legs were reduced, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swellings in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor, as all our neighbors will certify.
Yours, respectfully,
CALEB DAVIS

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co. Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

ROMAN EYE BALSAM,
FOR INFLAMED EYE-LIDS.

The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eye-lid evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.

READ THE FOLLOWING EVIDENCE.

New York, July 15, 184.

Messrs. A. B. & D. Sands: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your Roman Eye Balsam, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years.
Yours, &c.,
G. B. WILLIAMS, 262 Broadway.

PRICE, 25 CENTS PER JAR.

Spermatorrhea can be Cured!
THE GREAT RUSSIAN REMEDY!

THIS unparalleled specific for the above fearful complaint, recommended by the Medical Societies of Berlin, Paris and Vienna, and by Dr. Andrew Ure, of London, has recently been imported by the agent of Johannesburgh & Co., the manufacturers, and is now for sale in San Francisco. A cure is guaranteed in from three to fifteen days, even when paralysis has taken place.

Address Box 14, San Francisco Post Office, inclosing $10, when sufficient will be sent for a perfect cure; and the harrowed mind of the almost lunatic victim of passion put to rest. We have also half packages at $5—that will be put up carefully and sent per express, free from detection. JOHANNESBURGH & CO.,
